Target version:	
Description	
There's a number of patches in the Debian package whcih might be useful to apply to mainline.	
I'm particularly thinking of the following patches:	
<code>hurd-usb</code>	
<code>improve-librtlsdr-pc-file</code>	
<code>improve-scanning-range-parsing</code>	
<code>ipv6-support</code>	
<code>use-udev-uaccess-rules</code>	
which can be found at https://salsa.debian.org/bottoms/pkg-rtl-sdr/tree/debian/debian/patches
