

SIMtrace 2 - Bug #3754

Missing dependency for buliding host software: libpcsclite-dev

01/10/2019 10:40 AM - jbruckner

Status:	Closed	Start date:	01/10/2019
Priority:	Normal	Due date:	
Assignee:	jbruckner	% Done:	100%
Category:			
Target version:			
Description			
In order to build the host software I had to install the package 'libpcsclite-dev' in addition to the dependencies mentioned in the wiki in section 'Preconditions'. It provides the otherwise missing 'libpcsclite.pc'. Can someone add this to the wiki? Or give me permission to do it :)

Thanks a lot for reporting this. I gave your account wiki editing permissions.

Thanks a lot for helping us to improve information and documentation about osmocom projects!

Thanks. Though I do not seem to have permission to edit <https://osmocom.org/projects/simtrace2/wiki> .
For other sites, e.g., <https://osmocom.org/projects/libosmocore/wiki/Libosmocore> it works.

My sincere apologies. This actually exposed a bug in our permission settings in redmine, which has been fixed now. So you already helped to close two issues :)
