| Target version: | |
| Spec Reference: | |
| Description | |
| <p>talloc has a quite well-structured way of allocating memory with text descriptions, so it should be possible to reasonably export its statistics as gauges in a universal way.</p> <p>E.g. we can export number of allocated elements per context and their total size.</p> <p>This feature might need to be enabled/disabled from VTY.</p> | |
