I. MEANINGS OF MARKS

The marks used in this manual have the following meanings.

Mark	Meaning
⚠	States a precaution to be taken to prevent danger to personnel, damage to the product, or damage to electronic components by discharge of static electricity. for example.
⚡	States a precaution to be taken to prevent damage to electronic components by electrostatic discharge.
🚫🔥	Informs you of fire-related cautions.
🔌	Informs you that the plug must be removed from the power outlet before starting an operation.
🔍📖 **NOTE**	Gives useful information to understand descriptions.
✍📖 **REFERENCE**	Indicates sections to be read to obtain more detailed information.

II. ABOUT THIS MANUAL

This manual is divided into four parts, and contains information required for servicing the product.

Chapter 1: General Description

This part explains product specifications and the how to service the unit safely.

Chapter 2: Technical Reference

This part explains the technical theory of the product.

Chapter 3: Maintenance and Service

This part explains how to maintain the products for service operations, troubleshooting and service switches.

Chapter 4: Appendix

This part explains the information of the installation, optional products and user data flow.

REFERENCE

- For more details of user operations and user reports, see the seperate volume of *USER'S GUIDE*.

- Procedure for assembly/disassembly and greasing points are not given in this manual. See the illustrations in the separate volume of *PARTS CATA-LOG*.

- Dtailed description of each SSSW/parameter is not given in this manual except the new SSSWs/parameters added to this model.
  See *G3 Facsimile Service Data Handbook (supplied separately)* for details them.

- See the *G3 Facsimile Error Code List (Rev.1, supplied separately)* for details of the error codes not shown in this manual.
  Details regarding D-channel error codes and B-channel error codes are mentioned in this manual.

- Detailed description of connector Locations and Signal Descriptions in not given in this manual.
  See the *Circuit Diagram* for details them.

Chapter 1

General Description

1. FEATURES

1.1 Overview

This product is a G4/G3 transceiving facsimile based on the ITU-T recommendation. It can be used in Euro-ISDN.

*: This mark indicates new function

High image quality

Ultra-high quality image processing. Gives faithful reproduction of documents.

Plain paper printing with LBP

The printer section uses an LBP which employs an on-demand fixing system, operating the fan and fixing heater only when printing, and prints on plain paper.

Excellent print quality and speed

This product offers 600∞600 dpi laser beam printing, providing you with high resolution text and graphics. The exceptional printing speed of 6 pages per minute allows you to work more effectively.

Toner detection function

This unit uses a magnetic (permeability) sensor to detect remaining toner.

Automatic dialing

There are 16 one-touch dial locations, and 100 coded-speed dial locations. Registered numbers can be retrieved using the telephone directory feature.

ECM transmission

The ECM system provides communication error detection and retransmission of image data.

Memory reception

No need to worry about toner or recording paper running out in the middle of a reception. Received documents are stored in memory until they can be output later.

Delayed transmission

Documents can be sent automatically, at a preset time. This means that documents can be sent late at night, thus reducing transmission costs.

ON-HOOK Dial Function

Used in the event of facsimile information service. After dialing and connecting to the remote terminal, it is possible to send a DTMF signal and have manual communication.

Subaddress/Password Communications Function

Transmissions using "Subaddress" and "Password" which conform to the ITU-T standard can be used with this machine.

Convenient uses can be found when used in combination with the other terminal's memory box function, etc. It can use both G4 and G3 communications.

Polling Receiving Function

Using this function, a document placed at the other party's terminal may be taken out.

This can also be used in combination with "Subaddress" and "Password" which conform to the ITU-T standard.

It can use both G4 and G3 communications.

2. SPECIFICATIONS

2.1 General Specification

Type	Desktop
Body colour	Art gray
Power source	187 ~ 264V AC, 48 ~ 62 Hz,
Power consumption	standby less than 11W / less than 504W (when operating)
Usage environment	50.0°F ~ 90.5°F (10°C ~ 32.5°C), 20%~85% RH
	Horizontal ±3° or less
Operating noise	Measured in accordance with ISO standards
	Standby :Max. 30dB
	Copy :Max. 50dB
Dimensions (W × D × H)	365 mm × 365mm × 242 mm
	(Not including Trays)
Weight	18.96 lbs (8.6 kg) Including trays

2.2 Communication Specification

Applicable lines	Euro-ISDN
Handset	None
Communication method	Half-duplex
Communication control protocol	
G4	ITU-T T.62
G3	ITU-T T.30
Modulation method	
G3 image signals	ITU-T V.27ter (2.4k, 4.8k bps)
	ITU-T V.29 (7.2k, 9.6k bps)
	ITU-T V.33 (12k, 14.4k bps)
	ITU-T V.17 (TC7.2k, TC9.6k, 12k, 14.4k bps)
G3 procedure signals	ITU-T V.21 (No.2) (300bps)
	(With automatic fallback function)
Coding	
G4	ITU-T T.6 Coding method (MMR)
G3	ITU-T T.4 Coding method (MH, MR)
	ITU-T T.6 Coding method (MMR)
Canon express protocol (CEP)	None

Transmission time*

G4 (64 kbps)	approx. 3 sec.
G3 (14.4 kbps)	
ECM-MMR	approx. 6 sec.
MR	approx. 12 sec.

*Based on Canon FAX Standard Chart No.1, A4, standard mode

Communication speed

G4	64 kbps, 56 kbps
G3	14.4 kbps, 12 kbps, 9.6 kbps, 7.2 kbps, 4.8 kbps, 2.4 kbps

Time required for transmission protocol

Mode	Pre-message Protocol [1]	Post-message Protocol [2] (between pages)	Post-message Protocol [3] (after pages)
G3	approx.12 sec.	approx.4 sec.	approx.3.5 sec.
G4	approx.1.1 sec.	approx.1 sec.	approx.0.6 sec.

*1 Time from when other facsimile is connected to the line until image transmission begins.

*2 Post-message (between pages): Time from after one document has been sent until transmission of the next document starts if several pages are transmitted.

*3 Post-message (after last pages): Time from after image transmission is completed until the circuit closes.

Communication resolution

	G4	G3
Transmission	200 dpi × 100 dpi	8 dots/mm × 3.85 lines/mm
	200 dpi × 200 dpi	8 dots/mm × 7.7 lines/mm
	400 dpi × 400 dpi	8 dots/mm × 15.4 lines/mm
		16 dots/mm × 15.4 lines/mm
Reception	200 dpi × 100 dpi	8 dots/mm × 3.85 lines/mm
	200 dpi × 200 dpi	8 dots/mm × 7.7 lines/mm
	400 dpi × 400 dpi	

Supplementary service

MSN (Multiple Subscriber Number)	Yes
CLIP (Calling Line Identifier Presentation)	Yes
CLIR (Calling Line Identifier Restriction)	Yes
COLP (Connected Line Identifier Presentation)	Yes[1]
CFU (Call Forwarding Unconditional)	Yes[2]
AOC (Advice of Charge)	Yes[1]

[1]: German, Italy, only
[2]: German only

Minimum transmission time	10 msec. (MH,MR), 0 msec. (MMR)
Transmission output level	from -15 to 0 dBm
Receive input level	from -43 to 0 dBm
Modem IC	R144EFXL

2.3 Scanner Specification

Type	Sheets	
ADF capacity	Max. 20 sheets (A4/Letter)	
	Max. 10 sheets (Legal)	
Effective scanning width	Letter/Legal	8.42" (214 mm)
	A4	208 mm (8.19")
Scanning method	Contact sensor scanning method	
Scanning speed	Standard	8.7 sec./page
	Fine	17.5 sec./page
Image modes	Halftone (PHOTO mode)	
Scanning density adjustment	3 density level	
Halftone	64-gradation error diffusion system (UHQ)	

Scanning range

Sheet dimensions (W × L)

Maximum	218 mm × 1000 mm (8.58" × 39.3")
Minimum	88.9 mm × 44.45 mm (3.5" × 1.75")
Thickness	
multiple pages:	0.06 mm ~ 0.13 mm (0.002" ~ 0.005") 40~90 g/m²
1 pages:	0.06 mm ~ 0.43 mm (0.002" ~ 0.017") 34.7~340 g/m²
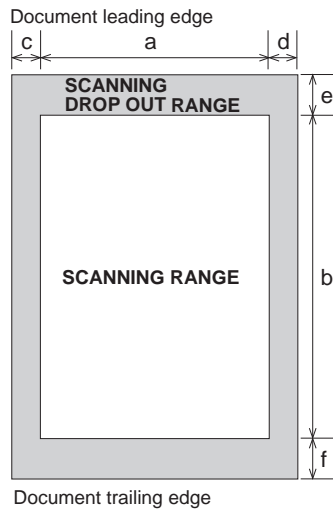

Figure 1-1 Scanning Range

Item	A4	Letter	Legal
a Effective scanning width	208 ±0.5 mm	8.42"±0.02"	8.42"±0.02"
b Effective scanning length	293 ±3.0 mm	10.84"±0.12"	13.84"±0.12"
c Left margin	1.0 ±2.0mm	0.04" ±0.08"	0.04" ±0.08"
d Right margin	1.0 ±2.5 mm	0.04" ±0.10"	0.04" ±0.10"
e Top margin	2.0 ±2.0 mm	0.08" ±0.08"	0.08" ±0.08"
f Bottom margin	2.0 ±2.0 mm	0.08" ±0.08"	0.08" ±0.08"

NOTE

- Document scanning width "**A4/LTR**" is set in service data #1 SSSW SW06, bit4.
- Skew area is not taken into consideration.
- The feed precision of the original is included in the scanning range values.

2.4 Printer Specification

Printing method	LASER Beam Printer (based on the LBP-660 printer)
Printing Cartridge	
Products name	Canon FX3 Cartridge
Product code	H11-6381-117
Valid period	Displayed on carton (2.5 years from date of manufacture)
Storage conditions	Temperature from 32.0°F to 95.0°F (0°C to 35°C)
	Humidity from 35% to 85% RH
Yeild	Approx. 2700 pages (black rate 4% chart)
Toner detection	Yes (Toner out detect)
Printing speed	Approx. 6 pages/minute
Paper output tray stacking (when using the recommended paper)	
Face down delivery slot	Approx. 50 sheets
Face up delivery slot	1 sheet
Paper tray	
Paper supply method	ASF (Auto Sheet Feeder)
Number of paper tray	1tray : Legal/Letter/A4 (Universal)
Paper capacity	Max. 0.40" (10 mm) thickness
	plain paper (Approx. 100 sheets)
Recommended paper	
KANGAS	
Weight	80 g/m^2
Paper size	A4
Manufactured by	KANGAS
NEUSIEDLER Canon Paper	
Weight	80 g/m^2
Paper size	A4
Manufactured by	NEUSIEDLER

Printing range

Paper dimensions (W × L)

Maximum	216 mm × 356 mm (8.50" × 14.02")
Minimum	76.2 mm × 127 mm (3.00" × 5.00")
Letter	216 mm × 279 mm (8.50" × 10.98")
Legal	216 mm × 356 mm (8.50" × 14.02")
A4	210 mm × 297 mm (8.27" × 11.69")
Thickness	64~90g/m^2

Paper leading edge

PRINTING DROP OUT RANGE

PRINTING RANGE

Paper trailing edge
Figure 1-2 Printing Range

Item	A4	Letter	Legal
a Effective printing width	206 ±2.0 mm	8.34" ±0.08"	8.34" ±0.08"
b Effective printing length	288.9 ±3.0 mm	10.68" ±0.12"	13.68" ±0.14"
c Left margin	2.0 ±2.0 mm	0.08" ±0.08"	0.08" ±0.08"
d Right margin	2.0 ±3.0 mm	0.08" ±0.12"	0.08" ±0.12"
e Top margin	$2.0\ ^{+3.5}_{-2.0}$mm	$0.08"\ ^{+0.14"}_{-0.08"}$	$0.08"\ ^{+0.14"}_{-0.08"}$
f Bottom margin	$6.1\ ^{+3.4}_{-4.8}$mm	$0.24"\ ^{+0.13"}_{-0.19"}$	$0.24"\ ^{+0.15"}_{-0.21"}$

NOTE

• The header and footer are printed in the printing range.

• Skew area is not taken into consideration.

• The feed precision of the original is included in the scanning range values.

• Print area when all-black pattern from Test Print modes are outputled.

2.5 Copy Specifications

Color copy	None	
Multiple copy	99 copies	
Copy resolution	Scanning	600 dpi $\times$ 300 dpi (direct copy)
		300 dpi $\times$ 300 dpi (memory copy)
	Printing	600 dpi $\times$ 600 dpi
Copy magnification ratio	100%, 90%, 80%, 70%	

NOTE

- When one copy is specified at a magnification ratio of 100%, the direct copy mode is entered. When two or more copies are specified, the memory copy mode is entered.
- When the magnification ratio is 90%, 80% or 70%, the memory copy mode is entered.
- When long originals are scanned in the direct copy mode, only the area that can be printed on a single page is copied, and copies are not made over multiple pages.

2.6 Function

Dialling	
Manual dialling	Numeric button
Auto dialing	Maximum 50 digits/Average 39 digits/Optimal/32 digits
	One-touch:16, Coded speed:100
Group dial	Max.115 locations
Redial	Numeric button redial function
ON-HOOK dialing	Yes
Transmission	
Broadcast transmission	Max. 117 locations (One-touch:16, Coded speed:100, Numeric button:1)
Delayed transmission	No. of Destination MAX. 117
	No. of Reservation MAX. 20
Confidential Tx/Rx	None
Relay broadcasting originating	None
Relay broadcasting	None
Subaddress/Password sending	Yes
Reception	
Reduction settings for reception (vertical only)	Yes
Automatic reduction of reception images	Yes (100%~70%)
Memory lock reception	None
Reception printing in reverse order	Yes (When using face-down delivery slot)
Polling	
Polling transmission	None
Polling reception	Yes

Others

  Dual access

    File No. of reservation   Max. 20 files

  Closed network   None

  Direct mail preventive   Yes

  Memory box   None

  Memory backup

    Backup contents   Dial registration data, User data, Service data, Time

    Backup IC   256 kbit SRAM for control

    Backup device   Lithium battery 3.0V DC/600 mAh

    Battery life   Approx. 5 years

  Image memory

    DRAM   Approx. 3.75 Mbyte

    Page   Approx. 230 pages*

    * Based on Canon FAX Standard Chart No.1, A4, standard mode.

Image data backup   None

Activity management   Yes

  a) User report

    One-touch speed dialling list

    Coded speed dialling list

    Group dialling list

    User's data list

    Activity report (Every 20 transactions: always transmission and reception together)

    Activity report (sending/receiving)

3.2 Operation Panel

Figure 1-5 Operation Panel (1)
❶ **REDIAL button**
   Press this button to redial the last number that was dialled using the numeric buttons.

❷ **Document feed lever**
   Set this lever to the left ( ) for automatic document feed, or to the right ( ) for manual document feed.

❸ **LCD display**
   The LCD display shows messages and prompts during operation, and displays selections, text, numbers and names when registering information.

❹ **ALARM lamp**
   This lamp flashes when an error occurs, or when the FAX-L260i is out of paper or toner.

❺ **Numeric buttons**

Use these buttons to enter numbers and names when registering information, and to dial fax numbers that are not registered for automatic dialling.

❻ **ON-HOOK button**

Use this button to access "touch-line" services.

❼ **CODED DIAL button**

Press this button and a two-digit code to dial a fax number that you have registered for coded speed dialling.

❽ **START/COPY button**

Press this button to begin sending, scanning, copying or other operations, or to select functions when registering information.

❾ **RESOLUTION button**

Press this button to select the resolution the FAX-L260i will use for the document you want to fax or copy.

❿ **STOP button**

Press this button to cancel sending, receiving, or any other operation.

⓫ **One-Touch Speed Dial/Special Function buttons**

Use these buttons for one-touch speed dialling and to perform special operations. See pages 2-22 and 2-23 for details on the special function buttons.

Figure 1-6 Operation Panel (2)

Special Function Buttons
❏ **FUNCTION button**
   Use this button to enable access to the special function buttons
   described below.

❏ **DELAYED TX button   01**
   Press this button to register a time for delayed sending.

❏ **PWD/SUBADD button   02**
   Press this button to send a document using a password and
   subaddress based on the ITU-T standard.

❏ **MEMORY REF button   03**
   Use this button to delete or resend documents stored in memory, or
   to print a list of documents in memory.

❏ **REPORT button   04**
   Use this button to print activity reports.

❏ **POLLING RX button   05**
   Press this button for polling reception.

❏ **FORWARDING button   08 (German only)**
   Use this button to activate/disactivate the received document
   forwarding function.

❏ **+ button   09**
   Press this button to enter a + sign when registering your fax
   number.

❏ **<, > (Arrow) buttons   10 and 12**
   Use these buttons to scroll through menu selections or to move the
   cursor when registering data.

5. SAFETY & PRECAUTIONS

5.1 Personnel Hazards
Figure 1-9 Personnel Hazards (1)
Figure 1-10 Personnel Hazards (2)

5.1.1 Electrical shock

Electrical shock hazard
- To prevent electrical shock, be sure to disconnect the power cord and ISDN line cable before disassembly.
- Remove grounding wrist straps before servicing this unit while the FAX's power is on. Otherwise, electrical shock may occur.

NOTE

Power supply unit
When power is supplied to this unit, 230 VAC will be supplied to the primary side.

Telephone line
The voltage supplied in the ISDN line is 34 VDC-42 VDC, as per ITU-T I.430 recommendations.

5.1.2 High-temperature parts

High-temperature warning
To prevent skin burns, disconnect the power cord and let this unit stand for at least 10 minutes to allow hot parts to cool.

NOTE

How to treat burns
Heat of about 122°F or more causes burns. Also, the longer the contact, the more severe the burn.

When treating a burn, the first minute after receiving the burn is the most important. Cool the burn immediately with cold running water. In case of a serious burn, seek medical attention immediately.

High-temperature parts
The parts which get hot during operation are indicated. For the location of these parts, refer to the figures.

(Ambient temperature 95°F (35°C) continuous copy operation)

Document feed motor (approx. 140°F (60°C))

Main motor (approx. 140°F (60°C))

Fixing section frame surface (approx. 203°F (95°C))

Fixing ass'y and pressure roller (approx. 338°F (170°C))

Power supply unit (Max. ~ 170.6°F (77°C))

PCNT board assembly (Max. ~ 190.4°F (88°C))

SCNT board assembly (Max.~153.7°F (67.6°C))

G4 board assembly (Max.~148.1°F (64.5°C))

5.1.3 Fire hazards

Do not dispose in fire.

Do not dispose of lithium batteries in fire. Doing so may rupture the battery and expose flammable materials.

Follow applicable local regulations when disposing of the SCNT board assembly's lithium battery.

Fire hazard

When using IPA or other solvents during servicing, heat or sparks from internal electronic circuits can ignite the solvent. Before using such solvents, be sure to turn off the power source and wait until the high-temperature parts cool. Use the solvent in a well-ventilated area.

5.1.4 Moving parts

Moving parts

To prevent mishaps due to moving or rotating parts during servicing, be sure to disconnect the power cord before disassembly.

5.1.5 LASER beams

This machine is classified as Class 1 laser product under EN60825: 1991 and EN60825-1: 1994. This means that the fax does not produce hazardous LASER radiation. However, observe the precautions below to avoid radiation by LASER beams during servicing involving disassembly.

Warning

If the LASER light gets in your eyes, it will damage the retina. Figure 1-11 is a LASER beam warning label which is placed on the LASER/scanner unit. Always remain within the contents of this manual when servicing, and do not carry out any other maintenance. Within the range of service work in this manual, you will not be exposed to dangerous LASER light.

Figure 1-11 LASER beam warning label

Disassembly Prohibited

Never disassemble or alter the printer section LASER/scanner unit. There is no servicing that requires you to disassemble the LASER/scanner unit.

Safety Mechanism

There is a safety mechanism that electrically stops LASER emission and scanner mirror rotation when the front cover is opened and when the microswitch on the body frame has operated.

NOTE

Also there is a safety mechanism that mechanically closes the shutter in the LASER/scanner unit to cut off the laser path, when the front cover is opened.

5.2 General Cautions
  5.2.1 Unit cautions

Safety Instructions

Read these safety instructions thoroughly before using your FAX-L260i, and keep them handy in case you need to refer to them later.

⚠
Caution

Except as specifically described in this user's guide, do not attempt to service the FAX-L260i yourself. Never attempt to disassemble the unit: opening and removing its interior covers will expose you to dangerous voltages and other risks.

❏ Always follow all warnings and instructions marked on the FAX-L260i.

❏ Use the FAX-L260i only on a sturdy, stable, level surface. If the unit falls, it could be seriously damaged.

❏ Do not use the FAX-L260i near water.

❏ The back of the FAX-L260i includes slots and openings for ventilation. To keep the FAX-L260i from overheating (which can cause it to operate abnormally and create a fire risk), take care not to block or cover these openings. Do not operate the unit on a bed, sofa, rug, or other similar soft surface, or near a radiator or other heat source. Do not place the FAX-L260i in a cupboard or cabinet or on shelves unless adequate ventilation is available.

❏ Operate the FAX-L260i only from the type of power source indicated on the unit's label. If you are unsure of the type of power available from your wall outlets, contact your local power company.

❏ Make sure the total amperage used by all devices plugged into the wall outlet does not exceed the ampere rating of the outlet's circuit breaker.

❏ Do not allow anything to rest on the power cord or place the FAX-L260i where the cord will be walked on. Make sure the cord is not knotted or kinked.

Figure 1-12 Unit Cautions (1)

❏ Do not insert objects of any kind into the slots or openings on the FAX-L260i's cabinet, as they could touch dangerous voltage points or short out parts, and result in fire or electric shock.

❏ Do not allow small objects (such as pins, paper clips, or staples) to fall into the FAX-L260i. If something does fall into it, unplug the unit immediately.

❏ Do not plug the power cord into an uninterruptible power supply (UPS).

❏ Always unplug the FAX-L260i before moving or cleaning it.

❏ Whenever you unplug the FAX-L260i, wait at least five seconds before you plug it back in.

❏ Keep the FAX-L260i away from direct sunlight, as this can damage it. If you have to place it near a window, install heavy curtains or blinds.

❏ Do not expose the FAX-L260i to extreme temperature fluctuations. Install the unit in a place with temperatures between 10˚ and 32.5 ˚C.

❏ Always unplug the FAX-L260i during thunderstorms.

❏ Before you transport the FAX-L260i, remove the toner cartridge.

❏ Always lift the FAX-L260i as shown below. Never lift it by its sheet feeder or other supports.
Figure 1-13 Unit Cautions (2)

Choosing a Location for Your FAX-L260i

Before unpacking your FAX-L260i, follow these guidelines to choose an appropriate location for the unit.

❏ Put the FAX-L260i in a cool, dry, clean, well ventilated place:

- Make sure the area is free from dust.

- Make sure the location is not affected by extreme temperature fluctuations, and remains between 10° and 32.5 °C.

- Make sure the area's relative humidity is always between 20% and 85%.

❏ Keep the FAX-L260i away from direct sunlight.

❏ If possible, place the FAX-L260i near an existing ISDN outlet, to allow for an easy connection of the ISDN line to the unit.

❏ Place the FAX-L260i near an electrical wall outlet that provides 200–240-volt AC (50–60 Hz) power.

❏ Do not plug the FAX-L260i into the same circuit as an appliance such as an air conditioner, electric typewriter, television, or copier. Such devices generate electrical noise that can interfere with your unit's ability to send or receive faxes.

❏ Set the FAX-L260i on a flat, stable, vibration-free surface that is strong enough to support its weight (about 8.6 kg).

Setting Up Your FAX-L260i

Figure 1-14 Unit Cautions (3)

Connecting the Power Cord

⚠️
Caution

Follow these guidelines when connecting your FAX-L260i to a power source:

❏ The FAX-L260i is intended for domestic use only and requires 200–240 V AC. Do not use it outside the country where it was purchased.

❏ Use only the power cord that came with the unit. Using a longer cord or extension cord can cause the FAX-L260i to malfunction.

❏ Unplug the unit only by pulling on the plug itself. Never pull on the cord.

❏ Do not plug the FAX-L260i into an outlet shared with an appliance such as an air conditioner, computer, electric typewriter, or copier. These devices generate electrical noise, which can interfere with the operation of the FAX-L260i.

❏ Make sure nothing is laying on the power cord, and that the cord cannot be walked on or tripped over.

❏ Do not overload the electrical outlet. Make sure the total amperage used by all the machines plugged into the outlet does not exceed the ampere rating of the outlet's circuit breaker.

❏ Do not plug the unit into an uninterruptible power supply (UPS).

Connect the power cord as follows:

1. Plug the supplied power cord into the power connector on the back of the FAX-L260i.
Figure 1-15 Unit Cautions (4)

5.2.2 Toner cartridge cautions
a) Handling the toner cartridge

Handling and Storing Cartridges
❑ Do not expose the cartridge to direct sunlight or bright light for longer than five minutes.
❑ Do not open the drum protective shutter on the cartridge. If the drum surface is exposed to light and damaged, print quality may deteriorate.
❑ Do not stand the cartridge on end, and do not turn it upside down. If toner becomes caked in the cartridge, it may prove impossible to free it even by shaking the cartridge.
❑ Keep the cartridge away from computer screens, disk drives, and floppy disks. The magnet inside the cartridge may harm these items.
❑ Never touch the drum protective shutter. When holding the cartridge avoid touching the drum protective shutter with your hands.
❑ Do not store the cartridge in direct sunlight.
❑ Avoid locations subject to high temperature, high humidity, or rapid changes in temperature. Store the cartridge between 32° and 95°F (0° and 35°C).
❑ Hold the cartridge as shown so that your hand is not touching the drum protective shutter.

❑ Store the cartridge in its protective bag. Do not open the bag until you are ready to install the cartridge in the unit.

❑ Save the protective bag. You may need to repack and transport the cartridge at a later date.

❑ Do not store the cartridge in salty air or where there are corrosive gases such as from aerosol sprays.

❑ Do not remove the cartridge from the FAX-L260i unless necessary.

⚠ **Caution**

DO NOT PLACE THE CARTRIDGE IN FIRE. TONER POWDER IS FLAMMABLE.

Figure 1-16 Precautions for Handling Cartridge

b) Usage period of toner cartridge

The usage period for the toner cartridge is stamped on the label of its individual package. period lasts for 2.5 years from the date of manufacture. Using a cartridge after this period may reduce print quality.

5.3 Servicing Cautions
5.3.1 Damage from static charge

This unit contains contact sensors and printed circuit boards equipped with ROM, RAM, custom chips, etc.
These electronic components are susceptible to damage caused by static charge.
When disassembling this unit, take care to prevent static charge.

Static electricity

Static charge can damage electronic components or alter their electrical characteristics. Even plastic tools and hands without grounding wrist straps can generate damaging static charge.

The following items are required to prevent static charge:
• A grounded, conductive mat
• Grounding wrist straps
• A cord with alligator clips to ground this unit's metal chassis

If you do not have any of the above on hand (during on-site servicing), follow the alternate measures below:
• Use a grounding bag to store and transport printed circuit boards and electronic devices.
• Avoid wearing silk or polyester clothing and leather-soled shoes. Wear cotton clothing and rubber-soled shoes instead.
• Avoid servicing this unit in a carpeted room.
• Before servicing this unit, touch this unit's grounded terminals to discharge any static charge.
• Wear grounding wrist straps and ground this unit's metal chassis.
• Always handle the circuit boards and devices along their edges. Do not touch the components and terminals with your fingers.

Shock hazard during power on

If servicing must be performed while this unit is turned on, do not wear any grounding wrist straps. This is to prevent electricity from passing through your body.

5.3.2 Scanner section
a) Contact sensor
• Handle contact sensors with care to prevent scratching or smudging of the scanning surface. Scratches or smudges can cause vertical stripes, etc., to appear on the scanned image.
b) ADF rollers
• Be careful not to scratch the ADF rollers. If the rollers are scratched, paper jams may result.
c) Lubrication points
• Document feed roller.

5.3.3 Printer section

a) Transfer charging roller

If skin, oil or, the like, gets on the sponge of the transfer charging roller, the rear side of the recording paper can be soiled, and blank patches can occur in printing.

During disassembly, hold the transfer charging roller by the shaft and gears at both ends.

Cleaning method

If a printing defects occur, clean the transfer charging roller, as explained in *Chapter 3: Maintenance & Service.*

REFERENCE

b) Fixing ass'y

If you get skin, oil, or the like, on the internal fixing film or pressure roller surface, the front or rear of the recording paper may be soiled, and fixing defects, and jams can occur.

During disassembly, hold the fixing ass'y by the plastic sections. Hold the pressure roller by the shaft, at both ends of the rollers.

Cleaning method

If the fixing film or pressure roller is soiled, clean the transfer charging roller, as explained in *Chapter 3: Maintenance & Service.*

REFERENCE

c) Lubrication points

Do not touch the greased parts of the outer periphery of the gear shaft and the gear teeth at the left side of the main frame. If you do, the grease (applied for smooth operation of the printer mechanism) will come off.

Use only specified grease.
If you use other grease, the grease may oxidize, and weaken plastic parts.

If you accidentally touch a greased part and grease comes off, reapply the grease, *see the PARTS CATALOG (supplied separately).*

REFERENCE

d) LASER/Scanner unit

The LASER/scanner unit cannot be adjusted in the field so do not attempt to disassemble it.

Never loosen or remove the screws on the LASER/scanner unit. Doing so might prevent satisfactory printing.

Screws
Figure 1-17 Precaution for Handling LASER/scanner Unit

5.3.4 Paper feed section

a) Pick-up roller

If, skin, oil or, the like, gets on the pick-up roller surface, misfeeding, jam, or multi-fedding canoccur.

During disassembly, hold the pick-up roller by the plastic sections.

Cleaning method

If the printing defevts occur, clean the pick-up roller, as explaned in *Chapter 3: Maintenance & Service*.

REFERENCE

5.3.5 Control boards

a) SCNT board

- The SCNT board stores the user data, service data, and other data. Therefore, when replacing the SCNT board, print out the stored data and then enter this data into the new SCNT board.

REFERENCE

The SCNT board replacement precaution is described in *"5.4.3 SCNT board replacement precautions" on Page 1-37.*

b) Power supply unit

- Current fuses FU101 on the power supply unit are directly attached. If these fuses must be replaced, we recommend replacing them together with the power supply unit.
- The power supply unit's adjustable volume VR201, VR202 has been factory-adjusted. Service personnel are not to alter its setting.

Do not plug the unit into an uninterruptible power supply (UPS).
Doing so may result in damage to the fixing ass'y.

5.4 Data-related precautions

The memory IC on the circuit board stores the user's registration data and values for various counters, etc., required for servicing. Although this data is normally retained in memory, it can be deleted by mistake. When handling this data during servicing, note the following precautions.

SRAM (IC5)

Lithium battery
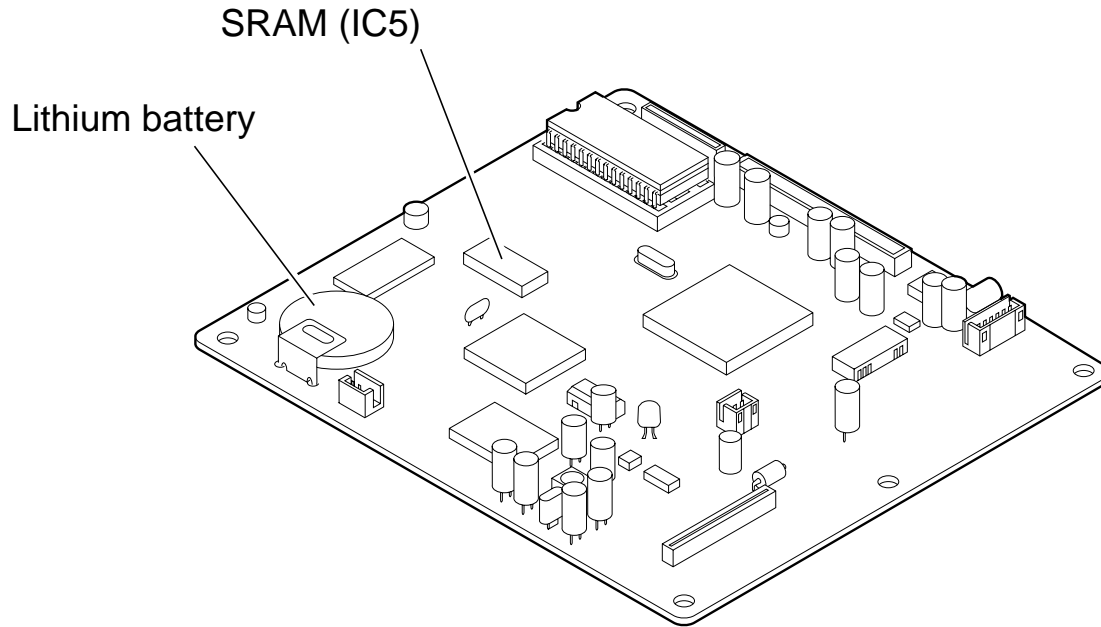

Figure 1-18 Backed up Devices

5.4.1 Data in the image storage memory (DRAM)

DRAM stores image data which was read other than by a direct transmission. It also acts as a buffer memory to store the image data received. If power is turned off, the memory clear list is printed automatically the next time the power is turned on. The user is thereby notified of the images that were erased from memory.

Reception image data

NOTE

This product is not equipped with image data backup, so that if the power supply is cut, data in memory reception will be lost.

When image data are set to be printed, they will be stored in the DRAM as memory reception images, and "**REC'D IN MEMORY**" will be displayed. If printing is disabled due to a fault in the printing section, transfer the stored reception image data to another fax machine.

Reception image data transfer

NOTE
When reception images cannot be output due to printer failure, etc., the image data can be transferred to another fax machine by using the reception image data transfer function. To transfer reception image data, set **SSSW #1 SW01 bit2 to** "**1**", then follow the procedures below.

FUNCTION   MEMORY REF
            03

| FUNCTION |
| MEMORY REFERENCE |
| DELETE DOCUMENT |

10 <   12 >

| TX |

START/COPY

| TX/RX NO.   XXXX |

10 <   12 >

| TX/RX NO.   XXXX | Select document.

START/COPY

| SELECT LOCATION |
| TEL= |

Numeric button

| TEL=XXXXXXXX | Input dial number.

START/COPY

| CALLING | Start transfer.
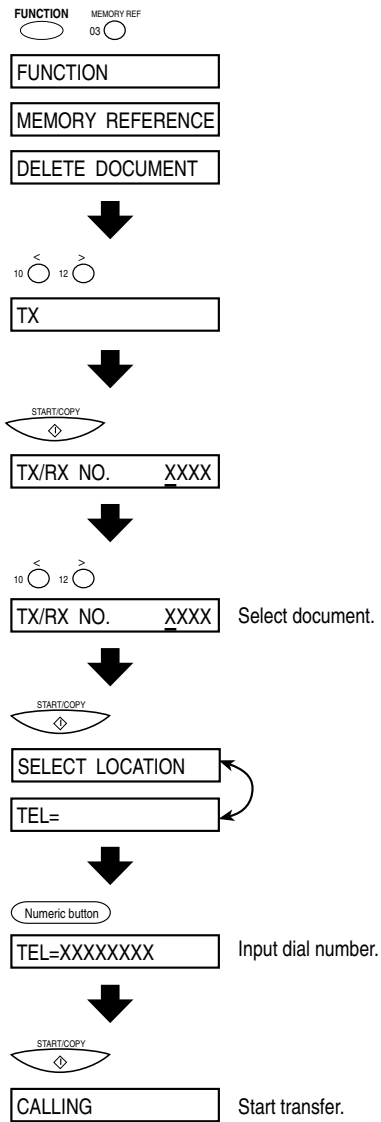

Figure 1-19 Reception Image Data Transfer

Be sure to return **SSSW #1 SW01 bit2 to** "**0**" after the reception image data transfer ends normally.

5.4.2 Data in the control processing memory (SRAM)

SRAM is backed up by a lithium battery. It can retain the stored data for 5 years after the power is turned off. SRAM stores the following data: All the data the user entered with the user data, the activity reports and other report-generating data, the redial data containing the redial destinations set with the Redial button, the servicing data set by repair personnel with the service soft switch. SRAM stores almost all of the data which can be entered or set.

These stored data can be checked with various reports.

NOTE

Lithium battery life

The lithium battery can last for over 5 years after the power is turned off.

When the power is on, the lithium battery's power is untapped. Therefore, the actual battery life can be much longer.

When the lithium battery becomes exhausted, "**DATA ERROR**" will be displayed after the power is turned off or on. When this happens, replace the lithium battery. Since the data in SRAM will be lost when the battery is replaced, it cannot be printed out.

After the lithium battery is replaced and the power is turned on, "**DATA ERROR**" will be displayed. Press the START/COPY button to discard the contents in SRAM and initialize it to the factory defaults.

5.4.3 SCNT board replacement precautions

Before replacing the SCNT board, print out all of the stored data.

The list which output the data that must be entered into the new SCNT board is listed below.

User list

One-touch speed dialing list
Coded speed dialing list
Group dialing list
User data list
Activity report

Service list

System data list
ISDN data list
System dump list

To printout these list, *see Chapter 3: 7. SERVICE REPORT on Page 3-99*.

REFERENCE

The service part SCNT board uses a jumper pin to close the lithium battery's circuit. To prevent battery depletion during shipping, only one prong of the jumper pin is covered with a jumper plug.

When replacing the SCNT board, re-attach the jumper plug so that it covers both prongs of the jumper pin and closes the circuit; the lithium battery can then be used for SRAM back-up.

If this procedure is omitted, there will be no battery back-up for the SRAM data.

After the new SCNT board is installed and the power is turned on, "**DATA ERROR**" will be displayed. Press the START/COPY button to discard the SRAM's irregular contents and initialize it to the factory defaults.

Then refer to the list that was printed out beforehand and enter the various data.

Replacing the ROM on the SCNT board

With this machine, it is necessary to print out all accumulated data, perform an "All clear", and set the "#5 TYPE" settings in the same way as when the SCNT board is replaced, even if only replacing the SCNT board's ROM.

Operation flow after repiacing SCNT board

Output user, service lists
▼
Remove SCNT board
▼
Replace with service part SCNT board
▼
Detach, then attach jumper plug to cover both pins
▼
Assemble main unit
▼
Power ON
▼
"DATA ERROR" display
▼
Press the START/COPY button
▼
Perform "ALL CLEAR"
▼
Perform "#5 TYPE"
▼
Use outputled service list to re-register dialing data, user data and service data
▼
Standby
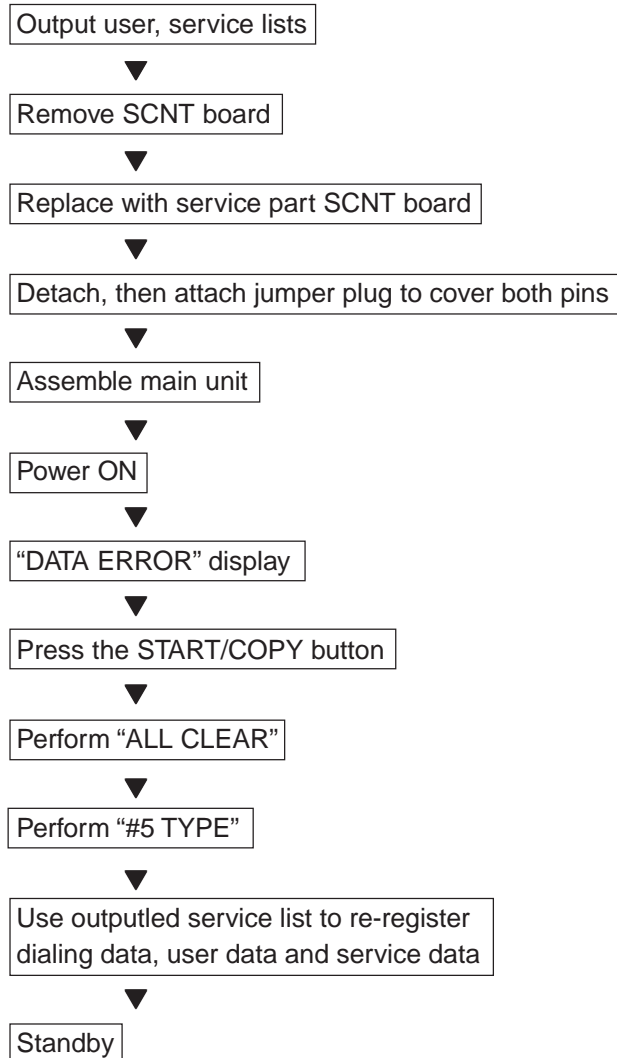

5.4.4 Data initialization through service operation

All the data can be initialized with the service data #8 clear operation.

REFERENCE

For details on the initialization procedure and the data that is erased, *see Chapter 3: 5.2 Service Data Settings on Page 3-54.*

NOTE

"All clear" when nothing works.
On a rare occasion, the display may go blank and all the buttons may stop working. Severe electrical noise and static can cause problems as well. In such a case, use the "**All clear**" feature.
After installing the unit for the first time and connecting the power cord, execute "**All clear.**"
Also, after an "**All clear,**" we recommend that you set the country type to suit the communication standard used in your country. Below is the procedure for performing All clear and type setting operation.

ALL CLEAR

FUNCTION — > — # — < (4 times) — #8 CLEAR — START/COPY

< — ALL — START/COPY — Execute All clear

Standby

TYPE SETTING

FUNCTION — > — # — > (4 times) — #5 TYPE — START/COPY

Select the country by < > key — START/COPY — STOP

Standby
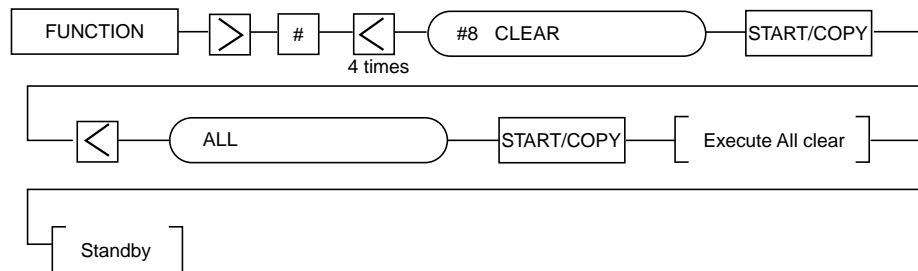

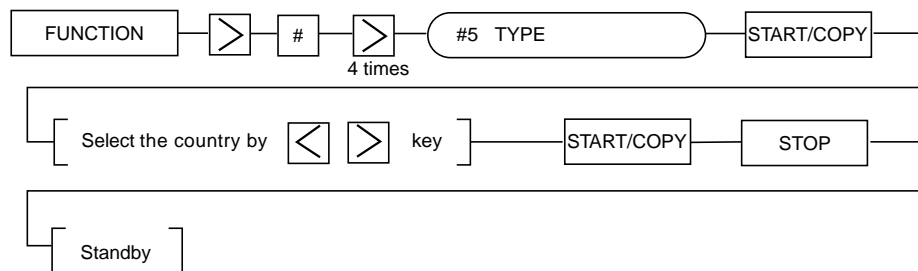

Figure 1-20 All Clear and Type Setting

While waiting to return to the ready state after executing "**All clear**", please do not press the STOP button. Doing so may cause a malfunction afterwards.

5.5 Protective Mechanism
5.5.1 Data battery backup function

If there is a power outage or if the power is turned off, the data stored in the control memory is retained since the lithium battery function as a data battery backup.

> **REFERENCE**
>
> For details on the backed up data, *see Chapter 1: 5.4 Data related precautions on Page 1-34.*

5.5.2 Overcurrent protection

This machine is provided with an overcurrent with built-in fuse, to prevent abnormal rises in temperature if an overcurrent flows to the motors and power supply due to driver IC trouble, software lockup and short circuit.

Protected Parts	Safety Measures
Document feed motor	IC protector (FU401) on PCNT board
Main motor	IC protector (FU401) on PCNT board
Power supply unit	Glass-tube current fuse (FU101 : 250V)
	overcurrent protection circuit
	thermistor (TH101)
Fixing ass'y	Thermal fuse, thermistor

5.5.3 Lightning protection

The fax unit's electrical components are protected from abnormal voltage caused by lightning.

Protected Component	Safety Device
Power supply unit	Varistor (VZ101) located at the primary side of the power supply unit discharge a voltage of more than
G4 board ass'y	The arrester (VZ1~4) positioned on the primary side of the G4 board discharges via the ISDN line more than 1000V of voltage applied between the line and the line. More than 500V applied between the line and the GND is also discharged via the power cord.

> **When protection is not possible**
>
> The G4 board sometimes may not be protected even by the protection circuits if lightning strikes the ISDN line.
>
> **NOTE**

5.5.4 Power leakage protection

The AC line, ISDN line, and metal parts of the fax unit are completely insulated. The fax unit has a grounded power cord to prevent electrical shock. If power leakage does occur, use the fax unit only with a grounded electrical outlet supplying the proper voltage.

6. QUALIFICATION REQUIRED FOR INSTALLATION WORK

The qualifications for installation must satisfy local laws and regulations.

This page intentionally left blank

Chapter 2

Technical Reference

1. DRIVE/ELECTRICAL SYSTEM LAYOUT

This machine is divided into three mechanisms: scanner section, paper supply section and printer section.

In the scanner section, the document feed motor drives the document feed rollers and separation rollers to feed the document from the document feed tray to the document eject slot at the front of the machine. The document is scanned by the contact sensor located along the document feed path.

In the paper supply section, the main motor in the printer section is used to drive the paper pickup roller, which separates one sheet at a time from multiple sheets set on the recording paper rest at the rear of the machine, and feeds the recording paper to the printer section.

In the printer section, the main motor drives the gears and rollers to print the image scanned from the document onto the recording paper fed from the papers supply section, which is then ejected. The user can choose to eject the printed paper either face up or face down.
Figure 2-1 Drive System Layout

The following six printed circuit boards are located in this machine:

• SCNT board that controls the entire system

• G4 board that controls the communication section

• PCNT board that generates high voltage for the printer

• OPCNT board that controls the operation panel's buttons and LCD.

• A power supply unit is also located in this machine.

The seven sensors shown below detect the status of the machine.

Front cover/cartridge sensor:
It detects whether the front
cover is open or closed,
and whether the toner
cartridge is in place.

Document edge sensor:
It detects the document
leading/trailing edges.

Toner sensor:
It detects whether there is
toner in the toner cartridge.

Document sensor:
Detects whether or not
a document is set.

Paper sensor:
It detects whether
recording paper is in place.

Paper edge sensor:
It detects the recording paper
leading/trailing edges.

Paper eject sensor:
It detects recording paper
eject conditions.

PCNT board

G4 board

SCNT board

Figure 2-2 Electrical System Layout

2-2

This page intentionally left blank

2. SCANNER MECHANISM

The scanner section scans documents that are to be sent or copied.
Figure 2-3 Scanner Section

Names and functions of parts:

1. Paper Guide

When properly adjusted to the width of the documents, the guide will hold the documents in the horizontal direction to prevent them from skewing when fed.

2. Document Feed Motor

This motor drives all the rollers in the scanner section.

3. Document Sensor (DS)

This sensor uses an actuator to detect the presence of documents to be scanned, and sends that information to the SCNT board by way of the gate array in the operation panel unit.

4. Document Stopper

This stopper is located to the side of the separation rollers, and prevents documents from entering too far inside the scanning section. This stopper is located here to improve document loading and prevent double feeding or non-feeding due to defective loading of documents.

5. Separation Guide

Separates the documents to prevent double-feeding.

6. Document Feed Lever → **See Page 2-6**

This lever switches between automatic document feed and manual document feed. Damage to the document caused by the separation roller can be minimized by switching to the manual document feed position when sending single sheets such as thick-stock paper or photographs.

7. Separation Roller

This roller uses differences in the coefficients of friction of the separation guide, document and separation roller to separate each of the sheets in a multiple-page document.

8. Upper Document Feed Roller → **See Page 2-6**

When the separation roller starts to rotate, the upper document feed roller raises the document stopper so that documents can be fed.

9. Document Edge Sensor (DES)

Using an actuator, the DES detects the edge of a document just before it reaches the contact sensor, and sends this information to the SCNT board.

10. Document Feed Roller

This roller feeds documents to the contact sensor after they are separated by the separation roller.

11. White Sheet

This white sheet is used as a whiteness reference when pre-scanning documents.

12. Contact Sensor

Scans the image information from the document, converts it to serial data, and transmits it to the SCNT board as an electrical signal. The contact sensor has a scanning resolution of 300 dpi.

13. Upper Document Eject Roller

Holds the document between the document eject rollers, and then ejects it.

14. Document Eject Roller

This roller ejects documents fed from the document feed roller.

15. Static Eliminator Brush

Removes static electricity which may have built up on the document in the scanning process, and guards against roller jams.

Initializing the upper document feed roller

When the separation roller starts to rotate, the position of the upper document feed roller is simultaneously initialized to raise the document stopper. Initialization is carried out when the power is turned ON, when documents are inserted and when documents are ejected.

NOTE

Document feed lever

Switching between automatic document feed and manual document feed is carried out by the document feed lever above the left side of the LCD. During automatic document feed, documents are gripped between the separation guide and the separation roller. Switching the lever to manual document feed raises the separation guide and frees it from the document. Manual document feed can therefore minimize the possibility of damage caused by pinching between the separation guide and separation roller when feeding documents such as thick-stock paper or photographs. However, because document separation does not occur in manual document feed mode, only one sheet at a time may be loaded. Loading multiple sheets will result in double feed.

Document Jam Detection

There are two types of document jams which may occur:

a) Feed jam

Occurs when the document edge sensor cannot detect the document's leading edge within 15 seconds after the start of document separation.

b) Eject jam/document too long

Occurs when the document edge sensor cannot detect the document's trailing edge within one meter of feeding after the document's leading edge is detected.

When one of these types of jams occurs, all data which have been read and stored in memory (except pages that have already been completely transmitted or copied) are erased.

This page intentionally left blank

3. PAPER SUPPLY SECTION

The paper supply section separates the sheets of recording paper loaded in the sheet feeder and feeds them to the printer section one sheet at a time.
Figure 2-4 Paper Supply Section

Names and functions of parts:

1. Paper Guide

This guide can be adjusted to the width of the loadable recording paper sizes. It prevents the recording paper from skewing during recording by accurately aligning the paper width.

2. Main Motor

This motor drives all the rollers in the paper supply section.

3. Lifting Plate

The lifting plate that was held down by the pickup roller is lifted up during paper feeding, and the recording paper loaded on the lifting plate contacts the pickup roller to be separated.

4. Paper Sensor (PS)

This sensor uses an actuator to detect the presence of recording paper in the sheet feeder.

5. Pickup Roller

The pickup roller has a semi circular roller. This roller is rotated once, and operating together with the lifting plate, feeds the paper one sheet at a time.

6. Paper Edge Sensor (PES)

This sensor uses an actuator to detect the leading edge of recording paper and sends detection information to the SCNT board. It is located under the pickup roller.

7. Pickup Solenoid

This solenoid controls rotation of the pickup roller. When the main motor is activated to begin paper feeding, the pickup solenoid releases the pickup roller. When the pickup roller picks up a sheet of recording paper and rotates one full turn, the solenoid locks the pickup roller again.

NOTE

Paper Feed Jam Detection Retry Function

Because the recording paper on this machine is loaded upright, the paper is sometimes difficult to feed when there is little recording paper left or the recording paper curls. For this reason even if the paper edge sensor does not detect the leading edge of the recording paper within 3.5 seconds after the pickup solenoid releases the pickup roller the machine tries to repeat the same operation before judging that a jam has occurred. If the paper edge sensor still cannot detect the leading edge of the recording paper, a paper feed delay jam is detected.

Paper feed jam detection

There are two types of paper jam which may occur:

a) Paper feed delay jam

The paper feed delay jam occurs if the paper edge sensor does not detect the leading edge of the recording paper within 7.0 seconds (including paper feed jam detection retry time) after the pickup solenoid releases the pickup roller.

b) Paper feed stationary jam

The paper feed stationary jam occurs if the trailing edge of the recording paper is not detected within 11.7 seconds after the paper edge sensor detects the leading edge of the recording paper.

When either of these jams is detected, the message "**CLEAR PAPER JAM**" is displayed. If this machine is receiving, the data is received via memory reception. If the machine is copying from memory, the image data in memory will be cleared.

To clear a paper feed jam, open the front cover and remove the jammed recording paper from inside. When the front cover is closed, the recording paper is automatically output. When jammed recording paper is removed from inside without opening the front cover, open and close the front cover once to reset the printer.

Paper size error

The machine does not have a paper size sensor. It recognizes the paper sizes (Letter, A4, and Legal) according to the user data setting.

A paper size error occurs if the specified paper size is different from the size of the paper placed in the sheet feeder when one page is actually printed. In this case, a message "**CHECK PAPER SIZE**" appears on the display, the ALARM lamp blinks, and the following operation is carried out.

If the specified paper length is greater than the actual paper length:

When the received document comprises one page, one sheet is printed and operation ends. The error message remains displayed, so clear the error message. When the received document comprises two or more pages, it is received in memory from the second sheet onward. Printing automatically starts from the 2nd sheet onwards after the error is corrected.

If the specified paper length is less than the actual paper length:

Regardless of whether the document consists of only one sheet or two or more sheets, it will be received in memory.

The document is automatically output after the error is corrected.

To correct the error, either match the user data setting with the actual recording paper, or match actual recording paper with the user data setting.

The paper size error does not occur during copying.

This page intentionally left blank

4. PRINTER SECTION

The LASER beam printer engine comprises the following sections.
Figure 2-5 Printer Section

4.1 LASER/Scanner Section

This section comprises a LASER unit, cylindrical lens, 4-faced polygon mirror, scanner motor, imaging lens, reflection mirror and BD unit. The LASER is driven in accordance with the LASER drive signals that are sent from the PCNT board. This LASER light passes through the cylindrical lens to fall on the 4-faced polygon mirror that is rotating at a fixed speed. The LASER light is reflected from the 4-faced polygon mirror and passes through the imaging lens, and reflects from the reflection mirror to scan the photosensitive drum in the toner cartridge.

4.2 Toner Cartridge

This cartridge comprises the primary charging roller, developing cylinder, photosensitive drum, cleaner blade, and toner.

The LASER beam from the LASER/scanner section forms a latent static image on the photosensitive drum that is charged by the primary charging roller. The photosensitive drum rotates inside the toner cartridge, and rotation of the developing cylinder causes toner to adhere to the photosensitive drum to form a visible image which is then transferred to the recording paper at the toner transfer section. Residual toner is then removed from the surface of the photosensitive drum by the cleaning blade.

4.3 Toner Transfer Section

This section comprises the transfer charging roller and the static eliminator. The recording paper passes between the photosensitive drum and the transfer charging roller, and the transfer charging roller is charged with a charge opposite to that of the toner to transfer the toner on the photosensitive drum to the recording paper. The charge on the rear side of the recording paper is then removed by the static eliminator.

4.4 Fixing Section

This section comprises the fixing ass'y and pressure roller. The fixing section on this machine is an on-demand system that uses fixing film with low thermal capacity.

The toner that was transferred to the recording paper at the toner transfer section is fused to the paper and fixed as a permanent image.

The fixing ass'y has a built-in fixing heater and thermistor. The fixing temperature is controlled by the printer controller on the PCNT board.

4.5 Paper Feed/Eject Section → **See Page 2-16**

After toner is fixed in the fixing section, the recording paper is fed to either the face-up delivery slot or the face-down delivery slot that is switched by the flapper. The user selects the setting of the flapper by the paper delivery selector at the bottom left of the front panel.

All rollers from paper feed through paper ejection are driven by the main motor.

1. Paper eject sensor

An actuator is used to detect the leading edge of the recording paper that is fed towards the ejected paper. The detection information is sent to the SCNT board.

2. Flapper

This flapper switches the direction in which the recording paper is ejected after toner is fixed.

NOTE

BD Malfunction

If the total number of sheets printed after turning the power ON is four or more, and BD is out of the BD cycle for 2.0 seconds or more during laser drive while the scanner motor is rotating at fixed speed, the printer controller judges this to be a BD malfunction.

Scanner Motor Malfunction

If the predetermined speed of rotation is not reached within 3.0 seconds of start of scanner motor rotation, the printer controller detects a scanner motor malfunction and stops the scanner motor.

The LASER/scanner unit contains parts that require adjustment that must be adjusted. Never disassemble the LASER/scanner unit.

NOTE

No-toner detection

The no-toner state is detected by the toner sensor (magnetic sensor) located on the pickup roller shaft. If a toner cartridge is installed, the toner sensor touches the side of the cartridge. The part of the cartridge which the toner sensor touches is made thinner to increase the sensor output. When the toner sensor detects no toner, the sensor output goes low.

Cartridge detection

A microswitch detects cartridge presence and front cover open/closed. The microswitch is structured so that it is shorted only when the cartridge is loaded and the front cover is closed.

Drum cover shutter

If the photosensitive drum is subjected to strong light, optical memory can cause dropout areas or black bands to occur. To prevent the photosensitive drum from strong light, a drum cover shutter is attached. Do not open this cover unless absolutely necessary.

NOTE

Fixing Heater Malfunction

The printer controller on the PCNT board detects a fixing heater malfunction in the following instances.

a) When a temperature of 100°C or more is not detected within 15 seconds after the fixing heater begins heating toward the normal preset target temperature

b) When a fixing unit temperature of 195°C or more continues for 150m seconds

c) When a temperature of 20°C or more is not detected even though the power is supplied for 0.5 seconds during printing or warming up

d) When a temperature of less than 0°C is detected for 150m seconds during fixing heater control

e) When the fixing heater temperature falls to 90°C or lower for 3 seconds during printing

When a fixing heater malfunction is detected, this machine shuts off the power supply to the fixing heater, stops the main motor, scanner motor and high-voltage systems, and generates a printer error.

Paper eject jam detection

There are two types of paper eject jam which may occur.

a) Paper eject stationary jam

A paper eject stationary jam occurs when the paper eject sensor detects the paper between 3.3 and 4.7 seconds after the paper edge sensor detects the trailing edge of the paper.

b) Paper eject delay jam

A paper eject delay jam occurs if the paper eject sensor detects "no paper" between about 5 seconds after the paper edge sensor detects the leading edge of the paper and about 2.5 seconds after paper edge sensor detects the trailing edge of the paper. Fixing unit windup jams are also detected by this method.

When either of these jams are detected, "**CLEAR PAPER JAM**" is displayed. If the jam occurs during reception, the data is received in memory. If it occurs in memory copy mode, the image data in memory is cleared.

To clear a paper eject jam, open the front cover, and remove the jammed paper. Output resumes automatically when you close the front cover. If you remove the jammed paper without opening the front cover, open and close the front cover once to reset the printer.

When a fixing unit windup jam occurs, remove the delivery cover to access the jammed paper, then remove the jam.

Paper delivery slot switching

The paper delivery slot can be switched by the paper delivery selector located at the bottom left on the front of the machine. After fixing, the paper is fed to the flapper, which guides it to one of two delivery slots. When the paper delivery selector is set to the up position, the flapper is lowered to guide paper to the face-down delivery slot. The paper is delivered face-down, so that pages are stacked in numeric order.

When the paper delivery selector is set to the down position, the flapper is raised to guide paper to the face-up delivery slot.
Figure 2-6 Paper Delivery Slot Switching

5. ELECTRIC CIRCUIT

5.1 Component Block Diagram
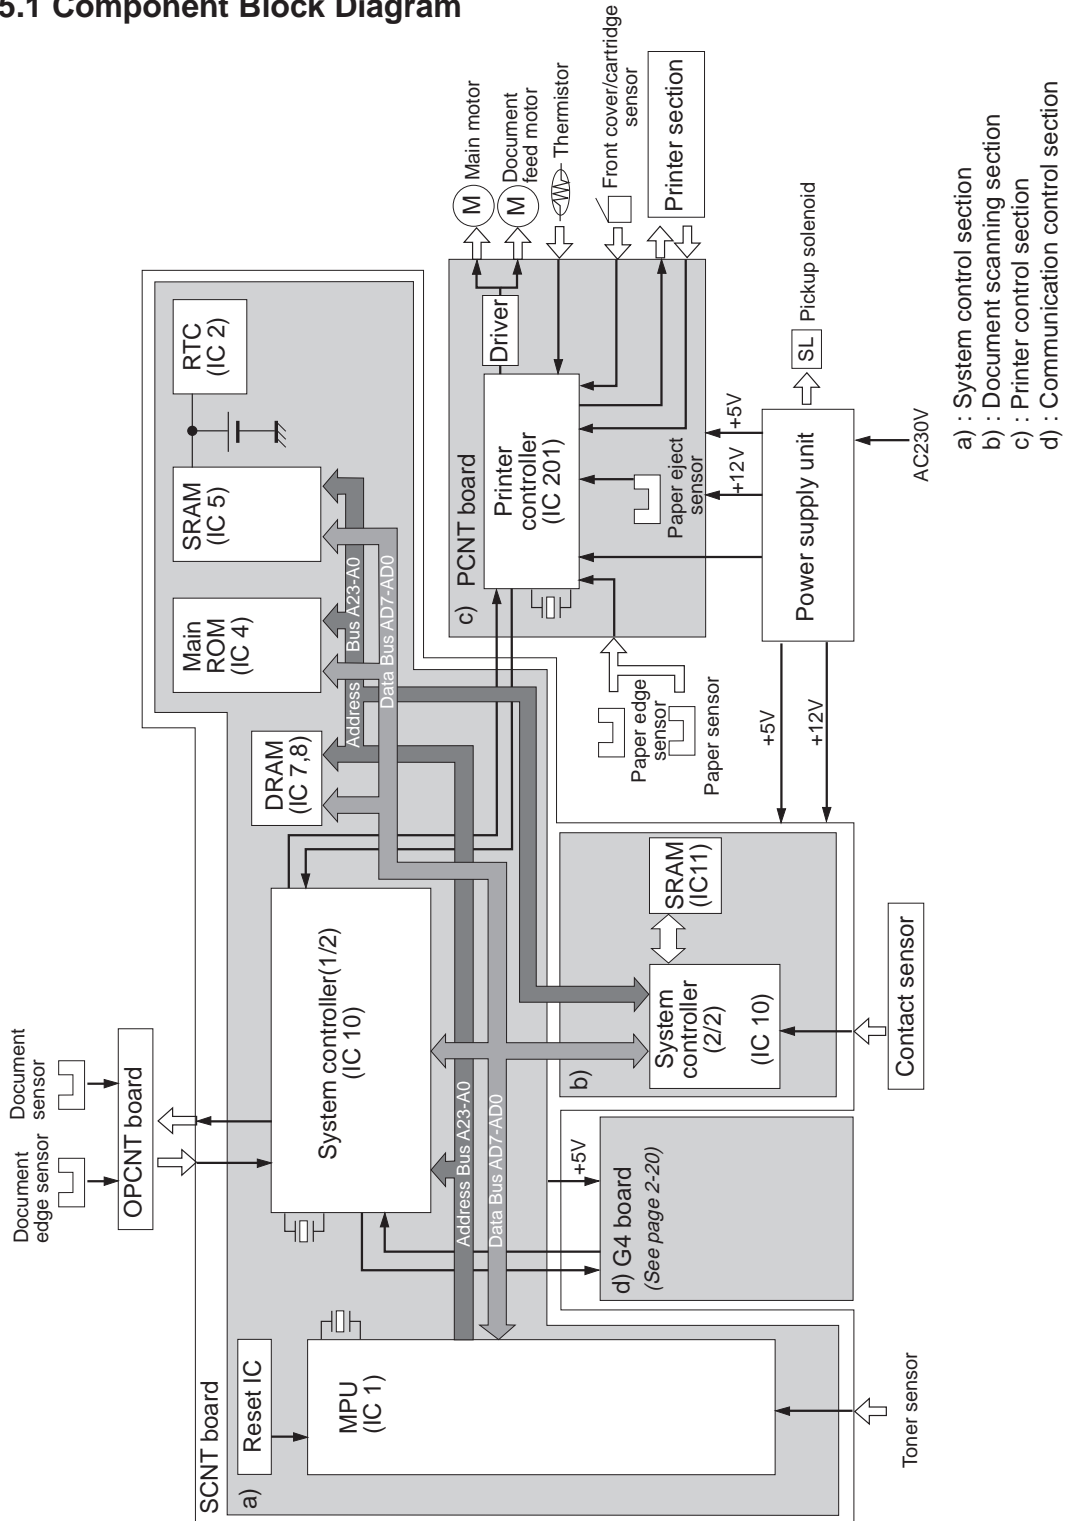

Figure 2-7 Component Block Diagram

5.2 Circuit Board Components

a) System control section

The system controller is made up of the following components, and controls the entire fax system.

a-1) MPU (Micro Processor Unit) (IC1)

The main functions of the NEC μPD70433GJ-16-3EB MPU are as follows:

•16 bit CPU

•24 bit address bus

•8 bit data bus

•DMA control

•A/D converter

•Software CODEC

•Interrupt control unit

a-2) System controller (IC10)

The system controller is a gate array for controlling MPU peripheral devices. The main functions of the system controller are as follows:

•Printer resolution conversion (Smoothing)

•LBP video interface

The LBP video interface transfers print signals to or from the printer controller and sends them to the MPU. The interface transmits an image signal (nVDO) and a vertical sync signal (nTOP) to the printer section, receives a horizontal sync signal (nBD) and printer section status from the printer section and transfers them to the MPU.

•OPCNT serial interface

•DRAM/SRAM controller

Controls DRAM/SRAM read/write and refreshing.

•Document feed motor control

•Reduction in vertical scanning

•Recording decoder

a-3) RTC (Real Time Clock) IC (IC2)

A SII S3510ANFJ-TB is used as the RTC. The RTC IC is backed up by lithium battery, and counts the date and time.

a-4) Main ROM (IC4)

This 8 Mbit ROM contains the control programs (e.g. operation panel, scanner and communications section etc.) for this fax.

a-5) SRAM (IC5)

This 256 kbit SRAM is backed up by lithium battery. SRAM holds data registered for system control and communications management information.

a-6) DRAM (IC7, IC8)

This 16 Mbit is used as memory for storing image data, and as an MPU work area.

b) Document scanning section

b-1) System controller (IC10)

The system controller IC include image processing function (UHQ) are as follows:

•Serial-to-parallel conversion

•A/D conversion

Input signals from the contact sensor are A/D converted.

•ABC(Auto Background Control)

Sets the slice level for each scan line.

•Edge enhancement processing

•Binaryzation processing

•Halftone processing

b-2) SRAM (IC11)

Used as a shading data buffer or an edge enhancement processing buffer.

c) Printer control section (PCNT board)

The printer control section is made up of the printer controller IC (IC 201). The printer controller IC is a microcomputer that incorporates a Fujitsu MBCU34102-104 8kbyte ROM and a 256byte RAM. The ROM contains printer control software to control LBP operations.

The printer control section receives commands from the system controller IC and controls paper pickup and loading, the fixing heater, the high voltage required for primary charging, development, and transfer, and the LASER/scanner unit.

The printer control section transfers the signal received from the printer section to the system controller IC as printer status.

The printer controller IC has the following other functions:

•Main motor control

•Fixing heater control

•Fixing heater temperature detection

•BD signal detection

•LASER drive control

•Pickup solenoid control

•APC control

•Scanner motor, fixing ass'y, or BD failure detection

•Control of high-voltage power supply

d) Communication control section
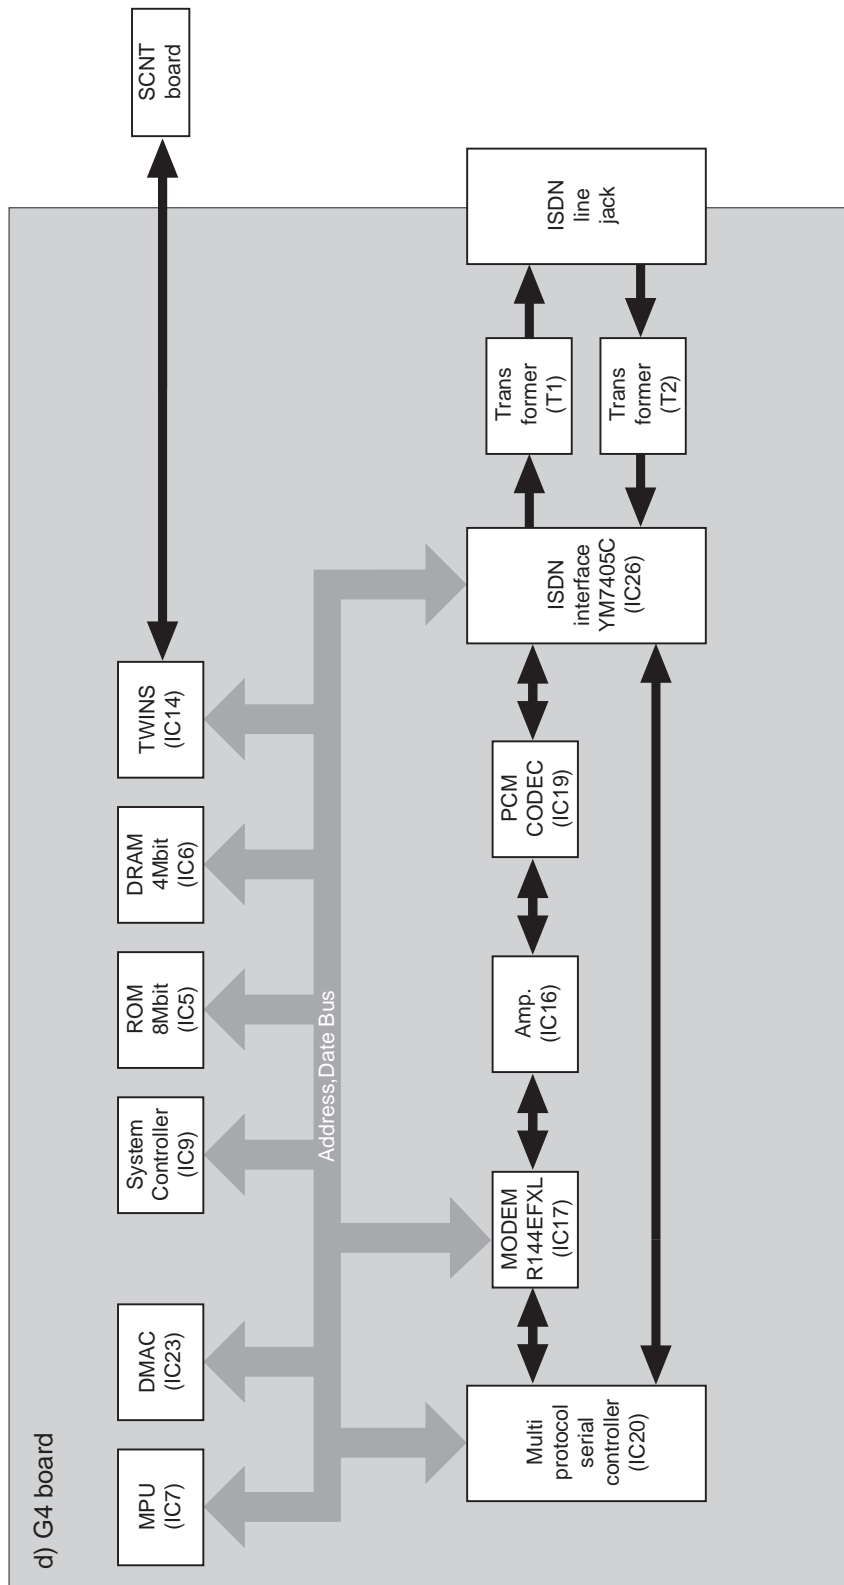

Figure 2-8 G4 Board Block Diagram

d-1) Modem IC (IC17)

A Rockwell R144EFXL PQFP is used as the MODEM IC. The MODEM IC carries out G3 modulation conforming to ITU-T standards V.27ter, V.29, V.17 and V.33 on transmitted data received from the MPU during transmission. During reception, the MODEM IC carries out G3 modulation on received signals from the telephone line, according to the same standards.

d-2) ROM (IC5)

This 8Mbit ROM contains the control programs (e.g. communications section etc.)

d-3) DRAM (IC6)

This 4Mbit DRAM is used as a temporary location to house image data when decoding/encoding image data and performing resolution exchange when data is being transmitted.

d-4) MPU (IC7)

The main function of the NEC UPD70741GC-25-7EA are as follows:
- 32 bit CPU
- 24 bit address bus
- 16 bit data bus
- DMA control
- A/D converter
- Software CODEC
- Interrupt control unit

d-5) PCM CODEC IC (IC19)

This IC converts the analog signal sent from a G3 modem into a digital signal when transmitting with G3. Also, when receiving with G3, it converts the received digital signal into an analog signal.

d-6) Multi-protocol serial controller IC (IC20)

This IC performs parallel/serial conversion of D-channel (Layer 3) data, and each B-channel data when transmitting with G4, between the DRAM (IC6) and the ISDN interface IC (IC26) interface, and performs parallel/serial conversion of B-channel data when transmitting with G3 between the DRAM (IC6) and the modem (IC7). It also performs ISDN interface IC (IC26) and HDLC (High level Data Link Control procedures) when handling D-channel (Layer 3) data, B-channel data when transmitting with G4, and image data when transmitting with G3 (ECM).

d-7) DMA controller IC (IC23)

Performs DMA (Direct Memory Access) control between the DRAM (IC6) and the Multi-protocol serial controller IC (IC20) when transmitting with G4/G3.

d-8) ISDN interface IC (IC26)

This YAMAHA-made IC YM7405C has Layer 1 functions, Layer 2 functions (LAPD), and Layer 3 interface functions for connection to an ISDN circuit.

d-9) Transformer (T1, T2)

Used to provide insulation between the ISDN circuit and the main unit, as well as to satisfy electric characteristics of the ISDN circuit.

d-10) System controller IC (IC9)

This Mitsubishi-made M66364FP is a standard cell for control of the MPU's peripheral devices.

d-11) TWINS (IC14)

This NEC-made gate array UPD65802GJ-117-3EN controls the IEEE1284's dual-party parallel transmission port.

d-12) Operation amplifier (IC16)

This IC amplifies the image data signal, V.21 signal, etc. when using G3 transmission.

5.3 Flow of Image Signals

a) Transmission

a	System controller IC (IC10)
b	DRAM (IC7,IC8)
c	MPU (IC1)
d	TWINS (IC14)
e	DRAM (IC6)
f	MPU (IC7)
g	Multi-protocol serial controller IC (IC20)
h	MODEM IC (IC17)
i	PCM codec IC (IC19)
j	ISDN interface IC (IC26)
k	Transformer (T1)
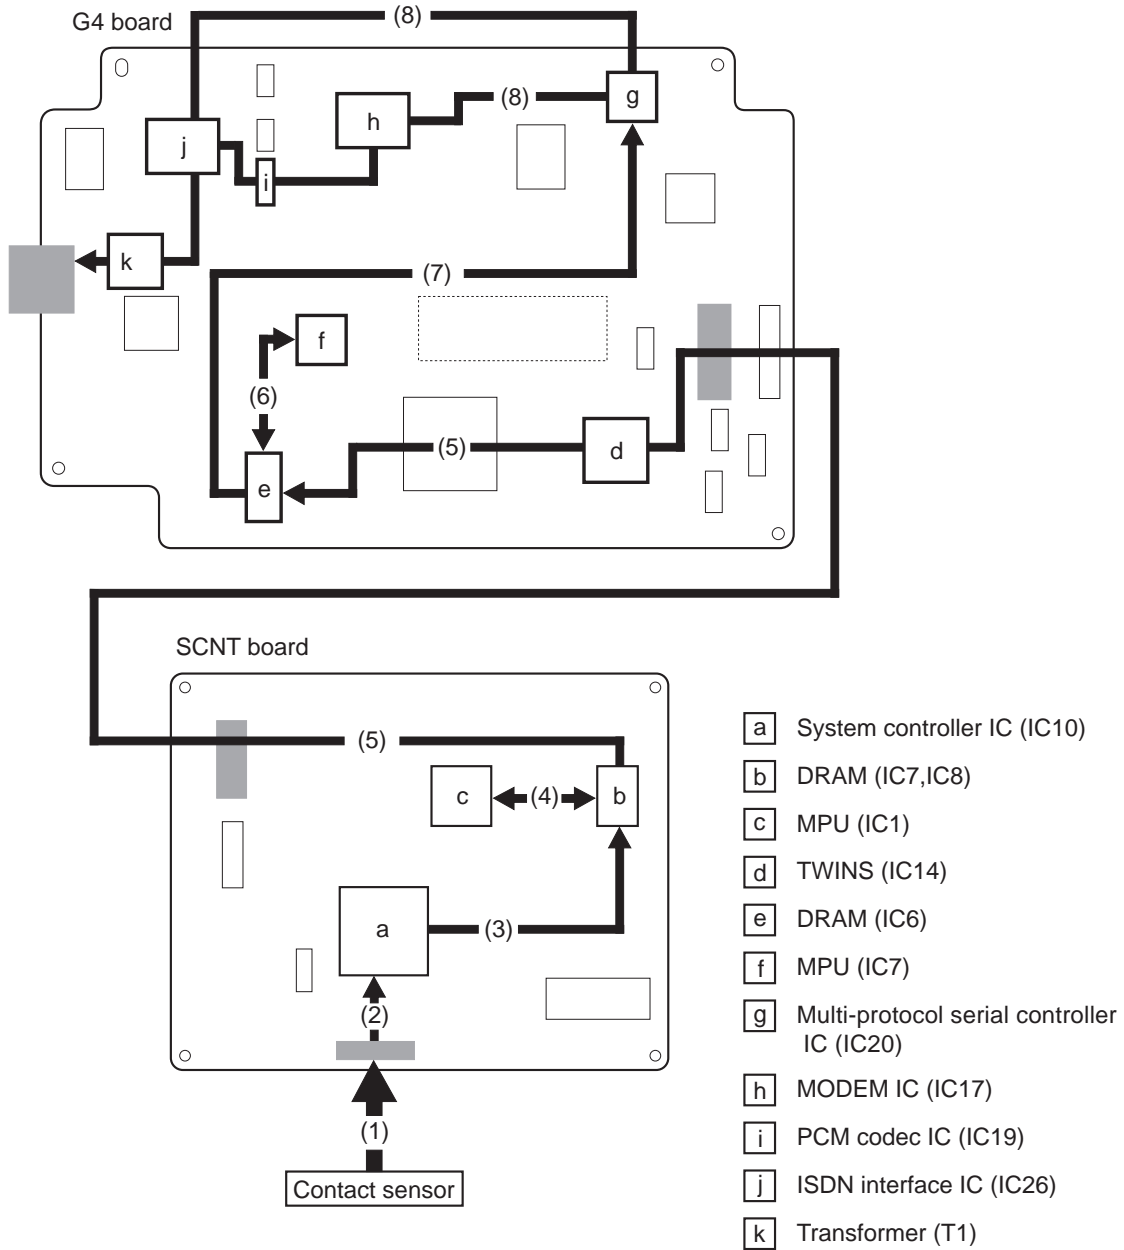

Figure 2-9 Transmission Image Signal Flow

(1) The document is read by the contact sensor and converted to analog image data. After that, the analog image data is sent to the SCNT board.

(2) The system controller IC converts analog image data from the contact sensor to digital image data.

(3) The system controller IC converts processed image data from serial data to parallel data, and writes them to the DRAM.

(4) The MPU encodes image data in the DRAM using a soft codec, and rewrites the encoded data into the DRAM.

(5) The encoded image data passes through the centronics interface, is DMA forwarded and written to the G4 board's DRAM.

(6) The encoded image data is decoded to one-time data with the MPU's soft codec, and converted to a resolution when transmitted. After this new raw image data is encoded with the transmission encoding method, it is read into DRAM again.

(7) Image data is converted from parallel data to serial data by the multi-protocol serial controller IC, and HDLC framed.

(8) With G4 transmission, image data passes through the ISDN interface IC, transformer and the ISDN line terminal to the ISDN line. With G3 transmission, image data is modulated by the MODEM IC, and after being converted to digital data by the PCM codec IC, passes through the ISDN interface IC, Transformer, and ISDN terminal to the ISDN line.

c	PCM codec IC (IC19)	h	TWINS (IC14)
d	MODEM IC (IC17)	i	DRAM (IC7,IC8)
e	Multi-protocol serial controller IC (IC20)	j	MPU (IC1)
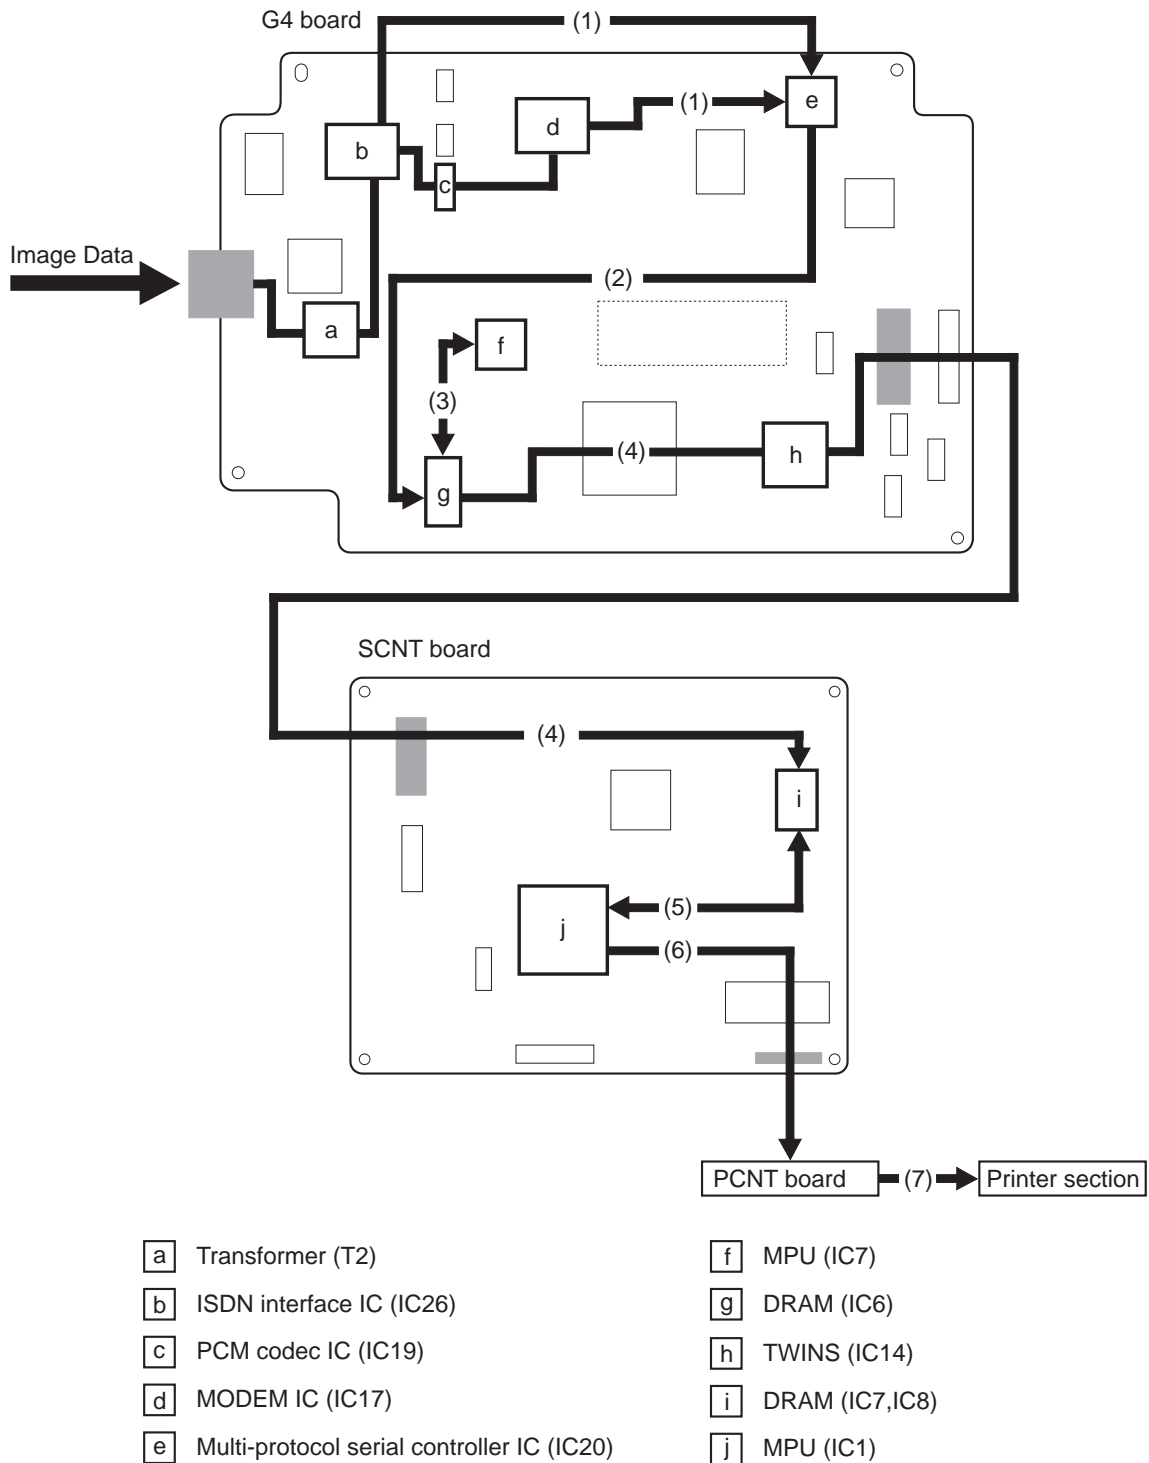

Figure 2-10 Reception Image Signal Flow

(1) When receiving with G4, the received data is sent through the ISDN terminal, Transformer, and ISDN interface IC to the multi-protocol serial controller IC. When receiving with G3, the received data is converted to analog data by the PCM coded IC, and after being demodulated by the MODEM IC, is sent to the multi-protocol serial controller.

(2) The image data is converted from serial data to parallel data by the multi-protocol serial controller, and then stored in DRAM.

(3) After the encoded image data is decoded to one-time raw data by soft codec in the MPU, it is again written to DRAM.

(4) The encoded image data passed through the centronics interface, is DMA forwarded and written to the SCNT board's DRAM.

(5) The encoded image data is decoded to raw data by the system controller IC.

(6) The system controller IC then converts the resolution of the fax data to the appropriate resolution for the printer data, and send it to the printer controller IC on the PCNT board.

(7) The printer controller IC prints data by controlling the main motor, LASER, and high voltage according to the received print data.

6. COMMUNICATION SYSTEM OPERATIONS

6.1 ISDN Protocol Messages

Main messages which are used in the communication protocols of Layer 2 - Layer 3 of the control channel's D-channel and Layer 2 - Layer 6 of the information channel's B-channel are listed.

6.1.1 D-channel messages

a) Layer 2

Message	Description	Remark
SABME	Set Asynchronous Balanced Mode Extended	The first thing sent when layer 2 is set.
UA	Unnumbered Acknowledge	A reply message for SABME, DISC.
DISC	Disconnect	Sent when layer 2 is released.

b) Layer 3

Message	Description	Remark
SETUP	Request for call settings	First sent by the calling party after setting layer 2 when making call settings. For the called party, it does not matter whether or not layer 2 is connected, SETUP will be done anyway. Then, if layer 2 has not been connected on the called party, it will be connected, and following that CONN, etc. will be sent.
SETUP ACK	SETUP Acknowledge	SETUP confirmation (request for additional information)
CALL PROC	Call Proceeding	This means that the calling party SETUP has been received by ISDN. It is an option message.
CONN	Connect	On the calling party, receives when the other terminal has responded. On the called party, sent for accepted SETUP when able to respond.
CONN ACK	Connect Acknowledge	On the calling party, sent for received CONN. On the called party, ISDN sent for the transmitted CONN.
ALERT	Alerting	On the calling party, receives when the other terminal is in a call. On the called party, sent when the user is in a call. It is an option message.
DISC	Disconnect	Sent when layer 3 is disconnected. Receives when disconnected from ISDN.
REL	Release	Sent when layer 3 is released or when DISC is received.
REL COMP	Release Complete	Sent when REL is received. ISDN sends with the transmitted REL.

6.1.2 B-channel messages

a) Layer 2

Message	Description	Remark
SABM	Set Asynchronous Balanced Mode	The first thing sent when layer 2 is set.
UA	Unnumbered Acknowledge	A reply message for SABM, DISC.
DISC	Disconnect	Sent when layer 2 is released.

b) Layer 3

Message	Description	Remark
CR	Call Request	Sent when layer 3 connects.
CN	Incoming Call	Received when layer 3 is connected.
CC	Call Connected	Reply for CR.
CA	Call Accepted	Reply for CN.
SQ	Restart Request	Sent before layer 3 connects.
SI	Restart Indication	Received before layer 3 is connected.
SF	Restart Confirmation	Reply for SQ/SI.
CQ	Clear Request	Sent when layer 3 disconnects.
CI	Clear Indication	Received when layer 3 is disconnected.
CF	Clear Confirmation	Reply for CQ/CI.

c) Layer 4

Message	Description	Remark
TCR	Transport Connection Request	Sent when layer 4 connects.
TCA	Transport Connection Accepted	Sent when TCR is received and layer 4 can be connected.
TCC	Transport Connection Clear	Sent when TCR is received and layer 4 cannot be connected.
TBR	Transport Block Reject	Sent when an error is found in layer 4 information.

d) Layer 5

Message	Description	Remark
CSS	Command Session Start	The first thing sent when layer 5 is started. Canon mode communication parameters are mainly added to this command.
RSSP	Response Session Start Positive	Sent when CSS is received and layer 5 can be started. Canon mode communication parameters are mainly added to this command.
RSSN	Response Session Start Negative	Sent when CSS is received and layer 5 cannot be started.
CSE	Command Session End	Sent when layer 5 is completed.
RSEP	Response Session End Positive	Reply for CSE.
CSCC	Command Session Change Control	Sent when it becomes layer 5's turn to transmit. This is used by polling communications, etc.

d) Layer 5 (Continue)

Message	Description	Remark
RSCCP	Response Session Change Control Positive	Reply for CSCC
CSUI	Command Session User Information	Indicates that there is a document procedure command.
RSUI	Response Session User Information	Indicates that there is a document procedure response.
CSA	Command Session Abort	Sent when the session procedure is halted.
RSAP	Response Session Abort Positive	Reply for CSA.
CDS	Command Document Start	Sent when the document procedure is started. States the size and resolution of pages that are able to be transmitted to CDE.
CDE	Command Document End	Sent when the document procedure is completed.
RDEP	Response Document End Positive	Reply for CDE.
CDPB	Command Document Page Boundary	Sent when it is shown that there is a gap between pages. A check point reference nunber is added as a parameter.
RDPBP	Response Document Page Boundary Positive	Sent when a page designated as CDPB is OK. A check point reference number is added as a parameter.
RDPBN	Response Document Page Boundary Negative	Sent when a page designated as CDPB is NG. A check point reference number is added as a parameter.
CDCL	Command Document Capability List	Indicates the function of the sending side (page size, resolution).
RDCLP	Response Document Capability List Positive	Indicates the function of the receiving side (page size, resolution).
CDR	Command Document Resynchronize	Sent when the document procedure on the sending side is halted.
RDRP	Response Document Resynchronize Positive	Reply for CDR.
CDD	Command Document Discard	Sent when the document procedure on the sending side is halted.
RDDP	Response Document Discard Positive	Reply for CDD.
RDGR	Response Document General Reject	Sent when a document procedure error is discovered on the receiving side.
CDUI	Command Document User Information	Indicates that there is data from layer 6 and higher (MMR).

e) Layer 6

Message	Description
P-START	Added to the front of the image data (page) as that page's attribute (paper, size, resolution) parameter.
P-END	Added to the end of the image data (page) for P-START.
PIX	The image data header, or the image data (MMR).

The message names (P-START, P-END, and PIX) are terms only used within Canon. Please note that recommendations for these message names are not being considered.

NOTE

6.2 D-Channel Standard Protocol
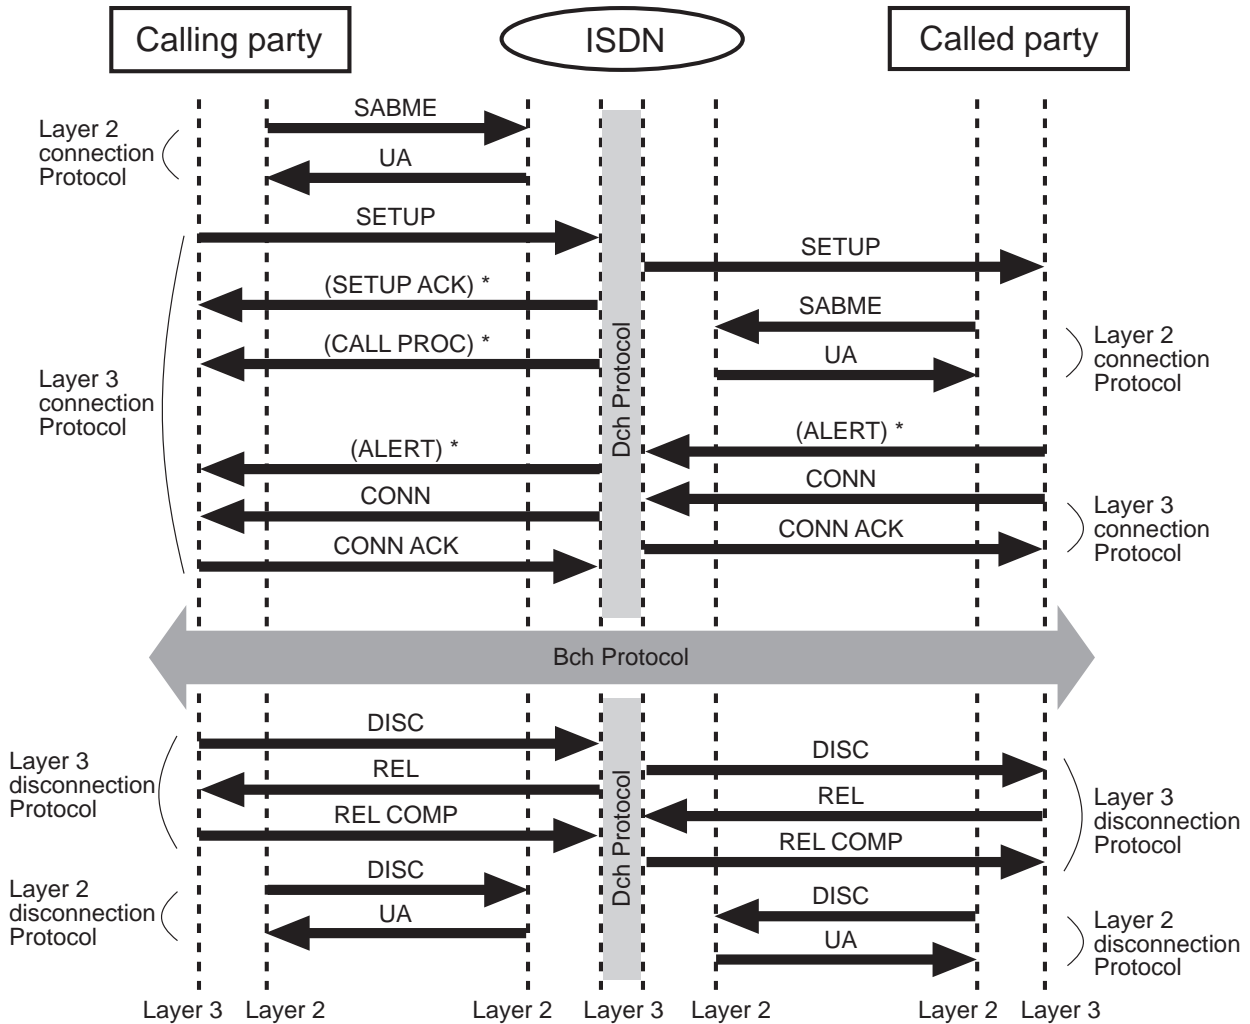

*: Messages in brackets are options.

Figure 2-11 D-Channel Protocol Flow

6.2.1 Information elements in the SETUP message

The SETUP message is one of the messages used in the D-channel Layer 3 communication protocol, as opposed to a network, and requires commencement of call settings. It is listed here, in the information element included in the main message, as a necessary element for the machine's service.

Sending Complete

Gives notification of completion of the Called Party Number destination. Addition of this required information is handled as an option in ITU-T recommendations. Additionally, the required information can be set as "Add/Do not Add" with a service switch on this machine.

Bearer Capability

Sets an outgoing G4 call to "unrestricted digital", an outgoing G3 call to "3.1kHz audio", and telephone to "speech". (There is no telephone in this machine.) It must be ensured that the information in question is added according to ITU-T recommendations.

Channel Identification

Designates the B-channel which will be used from now on. "B1 channel", "B2 channel", "any channel", and "no channel" will all be set. It must be ensured that the information in question is added according to ITU-T recommendations.

Progress Indicator

Notifies the channel generated for the call. Addition of this required information is handled as an option in ITU-T recommendations. Additionally, using a service switch, the progress contents can be set, and the required Progress Indicator information can be set as "Add/Do not Add" on this machine.

Calling Party Number

Sets the phone number of the calling party (=the machine itself). Addition of this required information is handled as an option in ITU-T recommendations.

Called Party Number

Sets the telephone number of the called party. Addition of this required information is handled as an option in ITU-T recommendations.

Low Layer Compatibility

Sets an outgoing G4 call to "unrestricted digital", an outgoing G3 call to "3.1kHz audio", and telephone to "speech". (There is no telephone in this machine.) Addition of this required information is handled as an option in ITU-T recommendations. Additionally, this machine can use a service switch to set the required information to "Add/Do not Add" in the SETUP message when calling with G4/G3.

High Layer Compatibility

With an outgoing G4 call, "G4 FAX" is set, with an outgoing G3 call, "G2/G3 FAX", and with telephone, "TEL". (There is no telephone in this machine.) Addition of this required information is handled as an option in ITU-T recommendations. Additionally, this machine can use a service switch to set the required information to "Add/Do not Add" in the SETUP message when making an outgoing G4/G3 call.

6.3 B-Channel Standard Protocol

Figure 2-12 B-Channel Protocol Flow
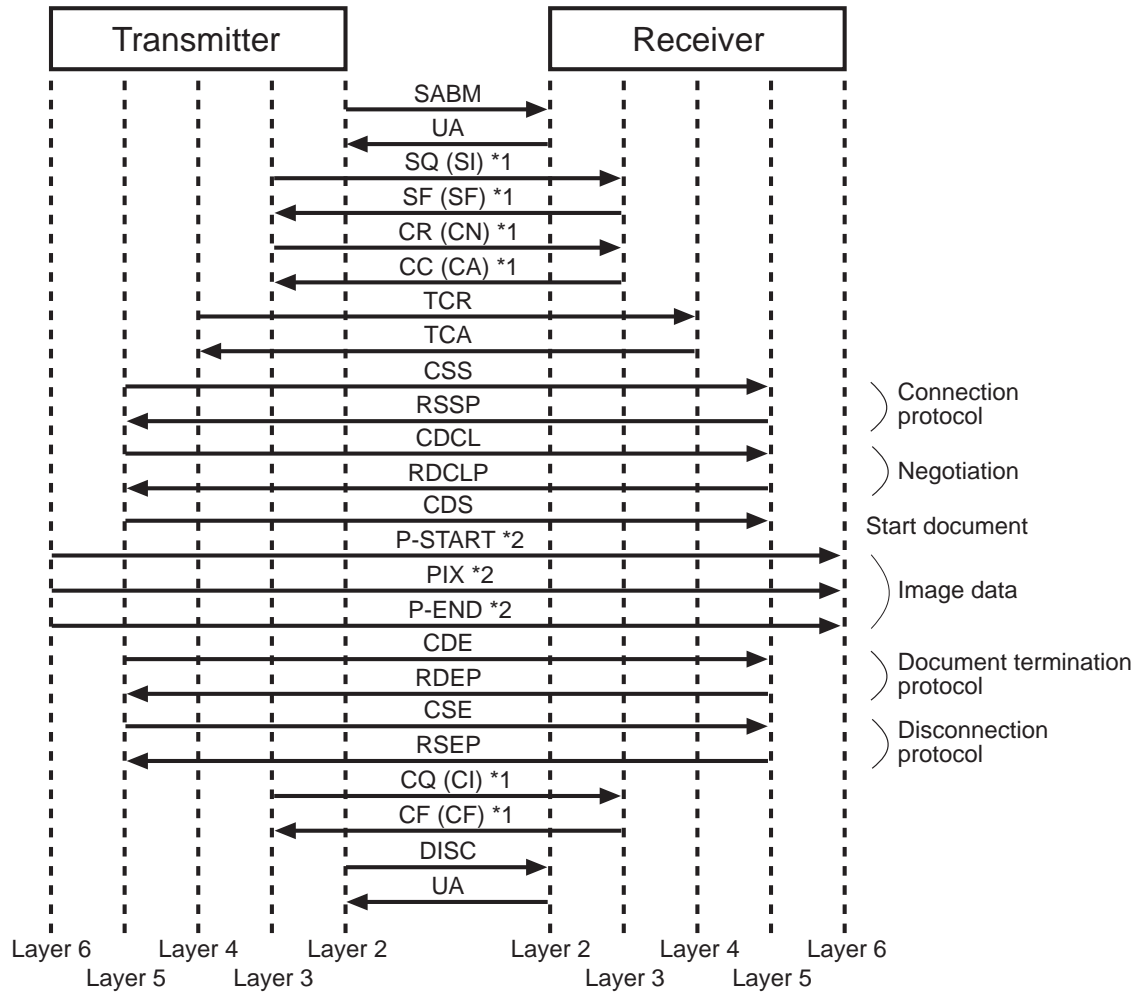

*1: The message seen by the receiving side is in brackets.
*2: The messages are terms only used within Canon.
    Please note that recommendations for these message names are not being considered.

7. NEW FUNCTION

There is no new function in this model.

This page intentionally left blank

Chapter 3

Maintenance & Service

1. MAINTENANCE LIST

1.1 Consumables

Level	Consumable	When
User	Toner cartridge (FX3)	When "**CHANGE CARTRIDGE**" is displayed.
Service technician	None	

1.2 Cleaning

Level	Location	When
User	Main unit outer covers	When dirty.
	Separation roller	When document separation/ feed performance falls.
	Separation guide	When document separation performance falls.
	White sheet	When copied and transmitted images are faint.
	Scanning glass (contact sensor)	When black vertical stripes appear in copied or transmitted images.
	Paper feed guide	When marks appears on back of paper in copied or received images.
Service technician	Paper pickup roller	When recording paper feed performance falls.
	Transfer charging roller	When marks on back of paper or blank spots at intervals of 1.96" (50 mm) appear in copied or received images.
	Static charge eliminator	When polka appear dots in copied or received images.
	High-voltage terminal	When copied or received images are light, dark, or completely blank.

Level	Location	When
Service technician	Fixing entrance guide	When marks , marks on back of paper, irregular/smudged black vertical line, paper jam, wrinkles in copied or received images.
	Paper face-up eject roller	When paper jams occur during copying or receiving.
	Flapper	When paper jams occur frequently during copying or receiving.
	Document feed roller	When document feed performance falls.
	Document eject roller	When document feed performance falls.
	Pressure roller	When marks appear on back of paper at intervals of 2.48" (63 mm), or poor fixing, paper jam, or wrinkles occur during copying or receiving.
	Fixing ass'y	When marks appear at intervals of 2.95" (75 mm) or poor fixing of copied or received images occurs.
	Separation pad	When recording paper separation performance falls.

1.3 Periodic Inspection

None

1.4 Periodic Replacement Parts

Level	Location	When
User	None	
Service technician	Separation guide ass'y	When scanned document count exceeds approx. 30,000 pages.

1.5 Adjustment Items

None

1.6 General Tools

Tool	Use
Phillips screwdriver	Removing/inserting screws
Flat bladed screwdriver	Removing/inserting screws
Precision flat bladed screwdriver	Removing plastic tabs
Tweezers	Removing coil spring
Pliers, needle nose	Driving retaining ring
Lint-free paper	Clean transfer charging roller, fixing film
Isopropyl alcohol	Clean fixing film, fixing entrance guide, fixing pressure roller, fixing eject roller, fixing eject guide, static charge eliminator, etc.

1.7 Special Tools

Tool	Use	Part No.
Grease (MOLYKOTE EM-50L)	Apply to specified parts	HY9-0007
Grease (IF-20)	Apply to specified parts	CK-8006
IC-Removing Tool (24P~64P)	Remove the ROM	HY9-0022

2. HOW TO CLEAN PARTS

2.1 Main Unit Outer Covers

Lightly wipe the unit's outer causing with a clean, soft, lint-free cloth moistened with water or diluted dishwashing detergent solution.

2.2 Separation Roller

Wipe with a soft, dry clean cloth.

2.3 Separation Guide

Wipe with a dry clean soft cloth.

2.4 White Sheet

Wipe with a soft, dry clean soft cloth.

2.5 Scanning Glass (Contact Sensor)

Wipe with a soft, dry clean cloth.

2.6 Paper Feed Guide

Wipe with a clean, soft, dry, lint-free cloth to remove any toner or paper debris.

Do not touch the transfer changing roller during cleaning. Otherwise, the print quality may deteriorate.

If Separation roller, Separation guide and Paper pickup roller are very dirty, wipe with a cloth moistened with Isopropyl alcohol (IPA). Do not use tissue paper. Dust from the tissue paper causes static electricity.

Precautions when using Isopropyl alcohol (IPA)

When cleaning with IPA, take care to prevent the IPA from splashing high-temperature parts. If IPA splashes high-temperature parts, leave for at least three minutes to allow the IPA to evaporate.
Figure 3-1 Cleaning Location 1

2.7 Paper Pickup Roller

Using lint-free paper dipped in isopropyl alcohol, wipe and dirt off the paper pickup roller.

2.8 Transfer Charging Roller

Wipe with lint-free paper and remove any toner or paper debris.

Do not touch or hold the sponge section of the transfer charging roller. Doing so can cause marks on back of paper or blank spots in copied or received images.

Never clean with solvents

Replace the charging roller if it is deformed or cannot be thoroughly cleared using lint-free paper.

2.9 Static Charge Eliminator

Wipe with a lint-free paper and remove any foreign matter, such as paper fragments.

2.10 High Voltage Terminal

Wipe with a clean, soft, dry, lint-free cloth to remove any toner or paper debris.

2.11 Fixing Entrance Guide

Wipe with a lint-free paper and remove any toner or paper debris.

2.12 Paper Face-up Eject Roller

Using lint-free paper dipped in isopropyl alcohol, wipe off the paper eject face-up roller.

2.13 Flapper

Wipe with a lint-free paper and remove any toner or paper debris.

2.14 Document Feed Roller, Document Eject Roller

Wipe with a soft, dry clean cloth.

2.15 Pressure Roller

Using lint-free paper dipped in isopropyl alcohol, wipe off the pressure roller.

2.16 Fixing Ass'y

Using lint-free paper dipped in isopropyl alcohol, wipe off the fixing ass'y.

2.17 Separation Pad

Using cloth dipped in isopropyl alcohol, wipe off the separation pad.
Figure 3-2 Cleaning Location 2

3. REPLACING PARTS & ADJUSTMENTS

3.1 Replacing parts

For details on the disassembly/assembly procedure when replacing parts, refer to the Parts Catalog (separate). Illustrations in the Parts Catalog are drawn in the order in which parts are disassembled. The Parts Catalog also shows enlarged drawings or supplementary illustrations for parts requiring caution during disassembly and assembly. Particular care should be paid to the cautions contained in illustrations.

3.2 Adjustment

None

4. TROUBLESHOOTING

4.1 Troubleshooting Index

Use the troubleshooting index below to investigate the cause of a problem and refer to the specified page for countermeasures.

Problem

• **Scanning problems (Evaluation criteria: Test printing is good, but the copied image is poor.)**

  • The document is not fed.   **Page 3-51**

     The document feed motor does not run.

     The document slips against the rollers.

     The document does not separate.

     The scanner unit's sensors are defective

  • The scanning image is abnormal.   **Page 3-52**

     Nothing is printed.

     The image has vertical stripes.

     The image has thick vertical stripes.

• **Communication problems**   **Page 3-52**

  • D-channel connection error

  • Cannot perform G4 communication.

  • Cannot receive.

4.2 Errors Shown on the Display

4.2.1 User error message

Look for the applicable error message and implement the appropriate countermeasures.

"BUSY/NO SIGNAL" (#005/#018)

Cause:	The receiving fax did not answer within 55 seconds. (T0 time over)
Solution:	Contact the other party and have them check their fax. You can try to send the document manually.
Cause:	The other party is not using a G4/G3 machine.
Solution:	Contact the other party and have them send or receive the document using a G4/G3 machine.
Cause:	The other party's fax is not working.
Solution:	Contact the other party and have them check their fax.
Cause:	The telephone number you dialed is busy.
Solution:	Try sending the document at a later time.

"CHECK DOCUMENT" (#001)

Cause:	Document jam. This is displayed when the document sensor detects paper, but the document edge sensor cannot detect the leading edge of the document with 15 seconds from the start of the feed operation.
Solution:	Clear the document jam.

"CHECK PAPER SIZE"

Cause:	The size of the paper loaded in the paper tray is different from the paper size set by the user data menu.
Solution:	Set the correct paper size in the user data setting.

"CHECK PRINTER" (##322~##324, #335)

Check the displayed error code and see the measure to eliminate the error. (*See Page 3-17.*)

"CHECK SUB/PWD" (#083, #102)

Cause:	Subaddress or password does not coincide.
Solution:	Contact the other party and match the subaddress/password.

"DATA ERROR"

Cause:	The registration data in the SRAM was destroyed and a checksum error occurred due to a dead lithium battery or SRAM failure.
Solution:	(1) Press the *START/COPY* button, and turn the power off and on again.
	(2) Replace the lithium battery.
	(3) Replace the SCNT board.

"DOC. TOO LONG" (#003)

Cause:	The document is longer than 1 metre.
Solution:	Use a copy machine to make a reduced copy of the document, then send again.
Cause:	It took more than 32 minutes to send, copy, a document or receive a document.
Solution:	Divide the document and send or copy each part separately. Contact the other party and have them divide the document and send each part separately.

"MEMORY FULL" (#037)

Cause:	The fax's memory is full because it has received too many documents.
Solution:	(1) Print out any documents which are stored in memory. Then start the operation again.
	(2) If the memory contains any facsimiles you don't need, delete them.
Cause:	The fax's memory is full because you tried to send too many pages at once.
Solution:	Divide the document and send each part separately.

"NO ANSWER" (#005)

Cause:	The receiving fax machine does not answer.
Solution:	Make sure you dialed the correct number. Try again later.

"NO PWD POLLING" (#084)

Cause:	When selective polling, the other party's machine does not have a password reception function.
Solution:	Redo selective polling without designating a password.

"NO PWD TX" (#081)

Cause:	The other party's machine does not have a password reception function.
Solution:	Retransmit without designating a password.

"NO RX PAPER" (#012)

Cause:	The receiving fax machine declares no paper in DIS, or its memory is full.
Solution:	Contact the other party, and ask them to put paper in their machine, or to clear their fax machine's memory.

"NO SLCT POLLING" (#082)

Cause:	The other party's machine does not have a select polling transmission function.
Solution:	Redo polling without designating a subaddress.

"NO SUB TX" (#080)

Cause:	The other party's machine does not have a subaddress reception function.
Solution:	Retransmit without designating a subaddress.

"NO TEL #" (#022)

Cause:	The button you pressed has no number registered for One-Touch Speed Dialing, Coded Speed Dialing, or Group Dialing.
Solution:	Print a list of registered numbers and make any corrections needed, then try again.

"NOT AVAILABLE"

Cause:	One-touch or coded speed dial already registered.
Solution:	Check the contents of the one-touch or coded speed dialling registration, then try again.
Cause:	The RX CALL FWD setting is incorrect.
Solution:	Comfirm that the ISDN number is set properly.

"CLEAR PAPER JAM" (#009)

Cause:	Paper jam.
Solution:	Clear the paper jam.

"CHANGE CARTRIDGE"

Cause:	The toner cartridge has run out of toner.
Solution:	Replace the toner cartridge.

"START AGAIN"

Cause:	An error occurred on the phone line or in the system.
Solution:	Start the procedure again from the beginning.

"LOAD PAPER" (#009)

Cause:	The fax is out of paper.
Solution:	Add more paper to the sheet feeder.

"CHECK COVER/CART"

Cause:	The toner cartridge is not installed properly.
Solution:	Make sure the toner cartridge is installed properly.
Cause:	Front cover is not closed.
Solution:	Close front cover.

"POLLING ID ERROR" (#021)

Cause:	The polling ID does not coincide with the other party's machine.
Solution:	Have the other party set the polling ID to "11111111" or "255."

4.2.2 Error codes

a) Service error code output

When service data #1 SSSW SW01 bit 0 is set to "1", then service error codes are printed on the activity management reports, reception result reports and error transmission reports when communication is terminated due to an error. Also, the following is displayed when an error occurs.
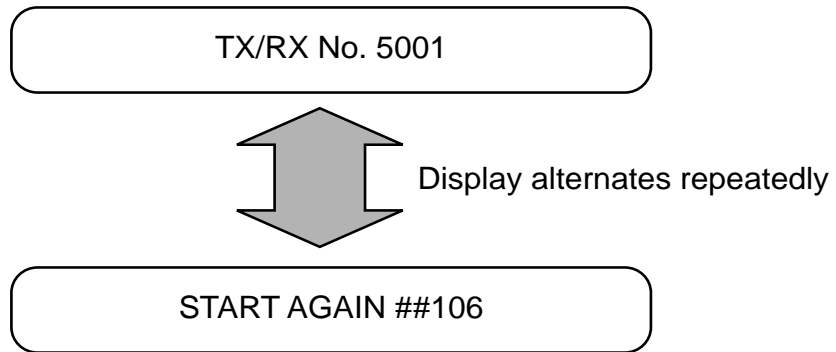

Figure 3-3 Service Error Code Display

b) Error code countermeasures

The following item c) lists all the error codes which the unit can display. The separate *G3 Facsimile Error Code List (Rev. 1)* does not specify the countermeasures for resolvable error codes. Also refer to this list when an error code appears.

Methods for countermeasures regarding D-channel error codes and B-channel error codes are mentioned in item e).

c) ERROR CODE LIST for FAX-L260i

New error codes indicate "*new*" in this list.

• User error code

No.	Tx or Rx	Definition
#001	[TX]	Paper Jam
#003	[TX/RX]	Copy Page, Communication Time Over
#005	[TX/RX]	Initial ID (T1) Time Over
#009	[RX]	Recording Paper Jam or Out of Paper
#011	[RX]	Polling Error
#012	[TX]	Other party Out of Paper
#018	[TX/RX]	Automatic Dialing Error
#021	[RX]	DCN during Polling Rx
#022	[TX]	Call Failure
#037	[RX]	Image Memory Full
#080	[TX]	Other Party does not have ITU-T Recommended Subaddress Reception Function
#081	[TX]	Other Party does not have ITU-T Recommended Password Reception Function
#082	[RX]	Other Party does not have ITU-T Selective Polling Reception Function
#083	[RX]	Subaddress/Password disagreement when using ITU-T recommended Selective Polling Reception
#084	[RX]	Other Party does not have ITU-T Recommended Password Reception Function (When using Selective Polling Reception)
#102	[TX/RX]	Different Password during Password Transmission
#995	[TX/RX]	Memory Communication reservation cancellation

• Service error code

D-channel error codes and B-channel error codes are not mentioned here. Please refer to item e).

No.	Tx or Rx	Definition
##100	[TX]	Excessive Repeat Protocol during Rx
##101	[TX/RX]	Modem Speed Different from Other Party
##102	[TX]	Fall Back Failure during Tx
##103	[RX]	Fail to Detect EOL for 5 Seconds (15 seconds for CBT) during Rx
##104	[TX]	RTN or PIN Received during Tx
##106	[RX]	Fail to Receive Protocol for 6 Seconds when Waiting for Protocol during Rx
##107	[RX]	Fall Back Failure on Tx Side during Rx
##109	[TX]	Receive Signals Other than DIS, DTC, FTT, CFR or CRP after DCS Tx and Exceed the Number of Protocol re-transmissions during Tx
##111	[TX/RX]	Memory error
##114	[RX]	RTN Transmission during Reception
##200	[RX]	Fail to Detect Picture Rx Carrier for 5 Seconds during Rx
##201	[TX/RX]	DCN received Other than Normal Binary Protocol
##204	[TX]	Receive DTC without Tx Data
##220	[TX/RX]	System Error (main program runaway)
##223	[TX]	Line Disconnect during Communication
##224	[TX/RX]	Abnormal Protocol during G3 Communication
##226	[TX/RX]	Stack Pointer Not within RAM Range

No.	Tx or Rx	Definition
##229	[RX]	Recording Unit Locked for 1 Minute
##232	[TX]	ENCODE Control Unit Malfunction
##237	[RX]	DECODE Control Unit Malfunction
##238	[RX]	PRINT Control Unit Malfunction
##261	[TX/RX]	System Error between Modem and SCNT
##280	[TX]	Excessive Repeat Protocol Command during Tx
##281	[TX]	Excessive Repeat Protocol Command during Tx
##282	[TX]	Excessive Repeat Protocol during Tx
##283	[TX]	Excessive Repeat Protocol during Tx
##284	[TX]	DCN Reception after TCF Transmission
##285	[TX]	DCN Reception after EOP Transmission
##286	[TX]	DCN Reception after EOM Transmission
##287	[TX]	DCN Reception after MPS Transmission
##288	[TX]	Receive Signals Other than PIN, PIP, MCF, RTP or RTN after EOP Transmission
##289	[TX]	Receive Signals Other than PIN, PIP, MCF, RTP or RTN after EOM Transmission
##290	[TX]	Receive Signals Other than PIN, PIP, MCF, RTP or RTN after MPS Transmission
##309	[TX/RX]	Abnormality in the communication between the SCNT board and the G4 board
##322	[RX]	Printer (LBP) Fixing Unit Trouble
##323	[RX]	Printer (LBP) BD (Beam Detect) Trouble
##324	[RX]	Printer (LBP) Scanner Trouble
##335	[TX/RX]	Data communication error between system control section and Printer control section
##750	[TX]	Exceed Repeat Protocol Due to Failure to Receive Significant Signals after Transmitting PPS-NULL during ECM Tx
##752	[TX]	Receive DCN after PPS-NULL Transmission during ECM Tx
##753	[TX]	Exceed Protocol Retransmission Limit or T5 Time (60 seconds) after PPS-NULL Transmission during ECM Tx
##754	[TX]	Exceed Retransmit Protocol after PPS-NULL Transmission during ECM Tx
##755	[TX]	Exceed Protocol Retransmission Limit Due to Failure to Receive Significant Signals after PPS-MPS Transmission during ECM Tx
##757	[TX]	Receive DCN after PPS-MPS Transmission during ECM Tx
##758	[TX]	Exceed Protocol Retransmission Limit or T5 Time (60 seconds) after PPS-MPS Transmission during ECM Tx
##759	[TX]	Exceed Retransmit Protocol after PPS-MPS Transmission during ECM Tx
##760	[TX]	Exceed Protocol Retransmission Limit Due to Failure to Receive Significant Signals after PPS-EOM Transmission during ECM Tx
##762	[TX]	Receive DCN after PPS-EOM Transmission during ECM Tx
##763	[TX]	Exceed Protocol Retransmission Limit or T5 Time (60 seconds) after PPS-MPS Transmission during ECM Tx
##764	[TX]	Exceed Retransmit Protocol after PPS-EOP Transmission during ECM Tx

No.	Tx or Rx	Definition
##765	[TX]	Exceed Protocol Retransmission Limit Due to Failure to Receive Significant Signals after PPS-EOP Transmission during ECM Tx
##767	[TX]	Receive DCN after PPS-EOP Transmission during ECM Tx
##768	[TX]	Exceed Protocol Retransmission Limit or T5 Time (60 seconds) after PPS-EOP Transmission during ECM Tx
##769	[TX]	Exceed Retransmit Protocol after PPS-EOP Transmission during ECM Tx
##770	[TX]	Exceed Repeat Protocol Limit Due to Failure to Receive Significant Signals after Transmitting EOR-NULL during ECM Tx
##772	[TX]	Receive DCN after EOR-NULL Transmission during ECM Tx
##773	[TX]	Exceed Protocol Retransmission Limit or T5 Time (60 seconds) after EOR-NULL Transmission during ECM Tx
##774	[TX]	Receive ERR after EOR-NULL Transmission during ECM Tx
##775	[TX]	Exceed Protocol Retransmission Limit Due to Failure to Receive Significant Signals after EOR-MPS Transmission during ECM Tx
##777	[TX]	Receive DCN after EOR-MPS Transmission during ECM Tx
##778	[TX]	Exceed Protocol Retransmission Limit or T5 Time (60 seconds) after EOR-MPS Transmission during ECM Tx
##779	[TX]	Receive ERR after EOR-MPS Transmission during ECM Tx
##780	[TX]	Exceed Protocol Retransmission Limit Due to Failure to Receive Significant Signals after EOR-EOM Transmission during ECM Tx
##782	[TX]	Receive DCN after EOR-EOM Transmission during ECM Tx
##783	[TX]	Exceed Protocol Retransmission Limit or T5 Time (60 seconds) after EOR-EOM Transmission during ECM Tx
##784	[TX]	Receive ERR after EOR-EOM Transmission during ECM Tx
##785	[TX]	Exceed Protocol Retransmission Limit Due to Failure to Receive Significant Signals after EOR-EOP Transmission during ECM Tx
##787	[TX]	Receive DCN after EOR-EOP Transmission during ECM Tx
##788	[TX]	Exceed Protocol Retransmission Limit or T5 Time (60 seconds) after EOR-EOP Transmission during ECM Tx
##789	[TX]	Receive ERR after EOR-EOP Transmission during ECM Tx
##790	[RX]	Transmit ERR after EOR-Q Reception during ECM Rx
##791	[TX/RX]	Receive Non-Significant Signals during ECM Mode Procedures
##792	[RX]	Fail to Detect PPS-NULL between Partial Pages during ECM Rx
##793	[RX]	Time Over Due to Failure to Receive Valid Frame during High Speed Signal Rx upon ECM Rx
##794	[TX]	Receive All 0 PPR during ECM Tx
##795	[TX/RX]	Trouble in the decoding processing during communication
##799	[TX]	System Error

d) New error codes and recovery methods

There is no new error code in this model.

Note, however, the following supplementary information, as the machine requires different actions than the existing models to correct:

##322 [TX/RX] Fixing heater temperature abnormality

Cause: Internal unit defect.

Solutions:
(1) Check the connections between the fixing ass'y and the PCNT board (J203) and between the fixing ass'y and the power supply unit (J102).
(2) Check the connection between the PCNT board (J403) and the power supply unit (J202).
(3) Check the resistance between connector pins of the fixing ass'y.
J203-12 and J203-13: 436 to 301 k (at 25°C)
J102-1 and J102-2: 25.1 to 28.8 (at 25°C)
If either resistance is incorrect, replace the fixing ass'y.
(4) Replace the PCNT board.
(5) Replace the power supply unit.
(6) Replace the SCNT board.

##323 [TX/RX] LASER/scanner section BD signal output abnormal

Cause: Internal unit defect (Low LASER intensity)

Solutions:
(1) Check the connection between the LASER/scanner section (J801) and the PCNT board (J203).
(2) Replace the LASER/scanner section.
(3) Replace the PCNT board.
(4) Replace the SCNT board.

Cause: Internal unit defect (BD signal timing error)

Solutions:
(1) Check the connection between the LASER/scanner section (J801) and the PCNT board (J203).
(2) Replace the LASER/scanner section.
(3) Replace the PCNT board.
(4) Replace the SCNT board.

##324 [TX/RX] Printer section scanner motor rotation rate abnormal

Cause: Internal unit defect (Incorrect scanner motor speed)

Solutions:
(1) Check the connection between the LASER/scanner section (J1) and the PCNT board (J203).
(2) Replace the LASER/scanner section.
(3) Replace the PCNT board.
(4) Replace the SCNT board.

##335 [TX/RX] Data communication error between system control section and printer control section

Cause:	Internal unit defect
Solutions:	(1) Check the connections between the PCNT board (J201) and the SCNT board (J8) and between the PCNT board (J403) and power supply unit (J202).
	(2) Replace the PCNT board.
	(3) Replace the SCNT board.
	(4) Replace the power supply unit.

##309 [TX/RX]

Cause:	• The board's interface message cycle has become disorganized.
	• A problem has arisen with the board's interface P1284.
	• There is an abnormality with the board, it cannot operate.
Solutions:	(1) Switch the power OFF/ON.
	(2) Replace the SCNT Board-G4 Board cable.
	(3) Replace the G4 Board.
	(4) Replace the SCNT Board.

e) D-channel error codes and B-channel error codes

• D-channel error codes (##1001~##1131)

D-channel protocol error codes are generated by taking the "cause number" notified which has been notified by the network and adding "1000" to it inside the machine. The required reason for the disconnection or restoration is assigned in the "cause number", but even if the "cause number" notified by the each country's network is identical, there will be times when the required reason for the disconnection or restoration will differ.

##1001 [TX/RX] a) Unallocated (unassigned) number

       b) Invalid call reference value

Cause a):	Indicated above
Solutions a):	(1) Re-check the phone number and try the call again.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.
Cause b):	Indicated above
Solutions b):	(1) Re-trasmit.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1002 [TX/RX] No route to specified transit network.

Cause:	Indicated above
Solutions:	(1) Re-check the method of connection to the designated relay network.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1003 [TX/RX] a) No route to destination.

       b) Designated bearer service not implemented.

Cause a):	Indicated above
Solutions a):	(1) Re-check the phone number and try the call again.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

Cause b): Indicated above
Solutions b): (1) Re-check the designated bearer service.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and S*peech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1006 [TX/RX] Channel unacceptable.

Cause: Indicated above
Solutions: (1) Wait a while and then transmit, because the other terminal is in the middle of a transmission.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1007 [TX/RX] a) Call awarded and being delivered in an established channel.
b) Call identity not exist.

Cause a): Indicated above
Solutions a): (1) Wait a while, then re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.
Cause b): Indicated above
Solutions b): (1) Re-transmit.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1008 [TX/RX] Call identity does not belong to a parked connection.

Cause: Indicated above
Solutions: (1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1010 [TX/RX] Unknown Facility-Code (Code for service characteristic).

Cause:	Indicated above
Solutions:	(1) Re-transmit.

      (2) Output a communications analysis list, and analyze it.

      (3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and S*peech Fallback on page 3-74.*

      (4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

      (5) Make an inquiry to the maker of the Switching equipment.

##1016 [TX/RX] a) Normal call clearing user busy.
b) No basic channel free.

Cause a):   Indicated above

Solutions a):   (1) Re-establish communication.

      (2) Output a communications analysis list, and analyze it.

      (3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and S*peech Fallback on page 3-74.*

      (4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

      (5) Make an inquiry to the maker of the Switching equipment.

Cause b):   Indicated above

Solutions b):   (1) Re-transmit.

      (2) Output a communications analysis list, and analyze it.

      (3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and S*peech Fallback on page 3-74.*

      (4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

      (5) Make an inquiry to the maker of the Switching equipment.

##1017 [TX/RX] a) User busy.
b) No approval for requested service characteristic.

Cause a):   Indicated above

Solutions a):   (1) Wait a while, then re-transmit.

      (2) Output a communications analysis list, and analyze it.

      (3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and S*peech Fallback on page 3-74.*

      (4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

      (5) Make an inquiry to the maker of the Switching equipment.

Cause b):   Indicated above

Solutions b):   (1) Re-transmit.

      (2) Output a communications analysis list, and analyze it.

      (3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and S*peech Fallback on page 3-74.*

      (4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

      (5) Make an inquiry to the maker of the Switching equipment.

##1018 [TX/RX] No user responding

Cause: Indicated above

Solutions:
(1) Re-transmit.
(2) Make sure that the other party's machine is plugged in and connected to the line.
(3) Output a communications analysis list, and analyze it.
(4) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(5) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(6) Make an inquiry to the maker of the Switching equipment.

##1019 [TX/RX] No answer from user (user alerted).

Cause: Indicated above

Solutions:
(1) Wait a while, then re-transmit.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1021 [TX/RX] Call rejected

Cause: Indicated above

Solutions:
(1) Re-transmit.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1022 [TX/RX] Number changed.

Cause: Indicated above

Solutions:
(1) Re-check the phone number and try the call again.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1026 [TX/RX] Non-selected user cleaning.

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1027 [TX/RX] Destination out of order.

Cause: Indicated above

Solutions: (1) Inquire as to whether or not the other party's machine can be used.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1028 [TX/RX] Invalid number format.

Cause: Indicated above

Solutions: (1) Check the phone number, and re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1029 [TX/RX] Facility rejected.

Cause: Indicated above

Solutions: (1) Re-check the designated service contract.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1030 [TX/RX] Response to status enquiry.

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1031 [TX/RX] Normal, unspecified.

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1032 [TX/RX] Look of outgoing connection

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1033 [TX/RX] Other party is busy

Cause: Indicated above

Solutions: (1) Re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1034 [TX/RX] a) No circuit/channel available
b) No access to a closed user group.

Cause a):	Indicated above
Solutions a):	(1) Wait a while, then re-transmit, because the other party's machine is busy.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.
Cause b):	Indicated above
Solutions b):	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1035 [TX/RX] Closed user group does not exist.

Cause:	Indicated above
Solutions:	(1) Re-confirm with the other party, and then re-transmit.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1038 [TX/RX] Network out of order

Cause:	Indicated above
Solutions:	(1) Wait a while and then re-transmit, because there is a network obstacle has occurred.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1041 [TX/RX] Temporary failure

Cause: Indicated above
Solutions: (1) Wait a while, then re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1042 [TX/RX] Switching equipment congestion

Cause: Indicated above
Solutions: (1) Wait a while, then re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1043 [TX/RX] Access information discarded

Cause: Indicated above
Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1044 [TX/RX] Requested circuit/channel not available

Cause: Indicated above
Solutions: (1) Re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1047 [TX/RX] Resources unavailable, unspecified

Cause: Indicated above

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1049 [TX/RX] Quality of service unavailable

Cause: Indicated above

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1050 [TX/RX] Requested facility not subscribed

Cause: Indicated above

Solutions:
(1) Re-check the contract, and re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1053 [TX/RX] No connection inside the net possible

Cause: Indicated above

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1056 [TX/RX] The calling number of the wished connection has been changed

Cause: Indicated above

Solutions: (1) Re-check the telephone number, then re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1057 [TX/RX] a) Bearer capability not authorized
b) Called terminal not operational

Cause a):   Indicated above

Solutions a):   (1) Re-check the contract, and re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

Cause b):   Indicated above

Solutions b):   (1) Inquire to the other party whether the terminal can be used, then re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1058 [TX/RX] a) Bearer capability not presently available
b) Call has not been accessed, break down through time-out

Cause a):   Indicated above

Solutions a):   (1) Re-check the contract, and re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

Cause b):   Indicated above

Solutions b):   (1) Re-check the telephone number, then re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1059 [TX/RX] Called party is busy (all B-channel are occupied)

Cause:	Indicated above
Solutions:	(1) Wait a while, then re-transmit.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1060 [TX/RX] Disconnection from network

Cause:	Indicated above
Solutions:	(1) Re-check the phone number and try the call again.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1061 [TX/RX] Called party is closed or does not support the service

Cause:	Indicated above
Solutions:	(1) Designated number/Re-check the contract, and re-transmit.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1062 [TX/RX] a) Active rejection of connection through the called party
b) Disconnection from network

Cause a):	Indicated above
Solutions a):	(1) Re-check the telephone number, then re-transmit.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.
Cause b):	Indicated above
Solutions b):	(1) Re-check the telephone number, then re-establish communication.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1063 [TX/RX] Service or option not available, unspecified.

Cause: Indicated above

Solutions: (1) Re-check the designated service contract, and re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1065 [TX/RX] Bearer capability not implemented

Cause: Indicated above

Solutions: (1) Re-check the designated service contract, and re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1066 [TX/RX] Non-supplied channel classification designated

Cause: Indicated above

Solutions: (1) Re-check the designated service contract, and re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1069 [TX/RX] Channel type not implemented

Cause: Indicated above

Solutions: (1) Re-check the designated service contract, and re-transmit.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1070 [TX/RX] Only restricted digital information bearer capability is available

Cause:	Indicated above
Solutions:	(1) Re-transmit.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1079 [TX/RX] Service or option not implemented, unspecified

Cause:	Indicated above
Solutions:	(1) Re-check the designated service contract, and re-establish communication.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1081 [TX/RX] Invalid call reference value

Cause:	Indicated above
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1082 [TX/RX] Identified channel does not exist

Cause:	Indicated above
Solutions:	(1) Re-transmit.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1083 [TX/RX] A suspended call exists, but this call identity does not

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1084 [TX/RX] Call identity in use

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1085 [TX/RX] No call suspended

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1086 [TX/RX] Call having the requested call identity has been cleared

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1088 [TX/RX] Incompatible destination

Cause: Indicated above

Solutions:
(1) Re-check the other party's terminal type, then re-transmit.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1089 [TX/RX] Line busy

Cause: Indicated above

Solutions:
(1) Re-transmit.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1090 [TX/RX] Release from the other party number or from a distant exchange

Cause: Indicated above

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1091 [TX/RX] Invalid transit network selection

Cause: Indicated above

Solutions:
(1) Re-check the designated relay network, and re-transmit.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1092 [TX/RX] Disconnection from network

Cause: Indicated above

Solutions: (1) Re-check the phone number and try the call again.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1095 [TX/RX] Invalid message, unspecified

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1096 [TX/RX] Mandatory information element is missing

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1097 [TX/RX] Message type non-existent or not implemented

Cause: Indicated above

Solutions: (1) Re-check the designated service contract, and re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.

(5) Make an inquiry to the maker of the Switching equipment.

##1098 [TX/RX] Message not compatible with call state or message type non-existent or not

Cause: Indicated above
Solutions: (1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1099 [TX/RX] Information element non-existent or not implemented

Cause: Indicated above
Solutions: (1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1100 [TX/RX] Invalid information element contents

Cause: Indicated above
Solutions: (1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1101 [TX/RX] Message not compatible with call state

Cause: Indicated above
Solutions: (1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
(5) Make an inquiry to the maker of the Switching equipment.

##1102 [TX/RX] Recovery on timer expire

Cause: Indicated above

Solutions:
(1) Re-check the designated relay network, and re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.
(5) Make an inquiry to the maker of the Switching equipment.

##1103 [TX/RX] Disconnection from network

Cause: Indicated above

Solutions:
(1) Re-check the phone number and try the call again.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.
(5) Make an inquiry to the maker of the Switching equipment.

##1111 [TX/RX] Protocol error, unspecified

Cause: Indicated above

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.
(5) Make an inquiry to the maker of the Switching equipment.

##1112 [TX/RX] Release because of error in a local area

Cause: Indicated above

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.
(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74*.
(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4*.
(5) Make an inquiry to the maker of the Switching equipment.

##1113 [TX/RX] a) Release because of error in a distant area
b) Disconnection from network

Cause a):	Indicated above
Solutions a):	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.
Cause b):	Indicated above
Solutions b):	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1114 [TX/RX] Disconnection from network

Cause:	Indicated above
Solutions:	(1) Re-check the phone number and try the call again.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1126 [TX/RX] Disconnection from network

Cause:	Indicated above
Solutions:	(1) Re-check the phone number and try the call again.
	(2) Output a communications analysis list, and analyze it.
	(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*
	(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*
	(5) Make an inquiry to the maker of the Switching equipment.

##1127 [TX/RX] Interworking, unspecified

Cause: Indicated above

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

##1130 [TX/RX] D-channel abnormal

Cause: Unrecoverable error occurred in D-channel layer 2,3 protocol procedure

Solutions: (1) Make sure the line correctly connected.

(2) Switch the power OFF/ON, then re-transmit.

(3) Output a communications analysis list, and analyze it.

(4) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(5) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(6) Make an inquiry to the maker of the Switching equipment.

##1131 [TX/RX] D-channel connection monitoring timer timed out

Cause: When calling, the connection (disconnection) from the other party expired in a fixed time interval with no response.

Solutions: (1) Check to see if the other party is absent or whether they are receiving manually.

(2) Output a communications analysis list, and analyze it.

(3) Make sure the 4 digits of the applicable error code are registered in *#4B ISDN BASIC G4/G3 Fallback* and *Speech Fallback on page 3-74.*

(4) Take countermeasures as outlined in *D-channel connection error* in *Communication problems on page 3-52, Section 4.3.4.*

(5) Make an inquiry to the maker of the Switching equipment.

• **B-channel error codes**

##1255 [RX] B-channel was disconnected without the document being started

Cause:	After the negotiation procedure on the transmitting side, a disconnection occurred without the document being transmitted.
Solutions:	(1) Have the transmitted party set the document properly
	(2) Output a communications analysis list, and analyze it.

##1309 [TX/RX] Abnormal post-reception checkpoint reference number (page number)

Cause:	The page is completed, and the checkpoint reference number which is the parameter used during CDE, CDPB, RDEP or RDPBP is abnormal (a series of long, non-numeric parameters, etc.)
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.

##1321 [TX/RX] 1-page transmission time-out

Cause:	Indicated above
Solutions:	(1) Lower the document's transmission resolution, then re-establish communication.
	(2) Output a communications analysis list, and analyze it

##1322 [RX] Other machine's terminal properties abnormal (session procedures)

Cause:	As a result of negotiation, the attributes of the terminal which show session user data are abnormal (abnormality in a non-G4 facsimile parameter, etc.)
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.

##1323 [TX] RSSN reception

Cause:	Compared with CSS transmission, the receiving side transmitted RSSN
Solutions:	(1) Re-transmit
	(2) Output a communications analysis list, and analyze it.

##1332 [TX/RX] Other terminal's properties are abnormal (Document procedures)

Cause:	As a result of negotiation, the attributes of the terminal which show session user data are abnormal (abnormality in a non-G4 facsimile parameter, etc.)
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.

##1334 [RX] Document attributes abnormal

Cause:	Attributes of the received page such as size, resolution, and encoding method are abnormal.
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.

##1336 [TX/RX] CSA reception

Cause:	CSA was received from the other machine during transmission
Solutions:	(1) Check whether the receiving machine's memory is full when transmitting.
	(2) Check whether the other machine's communication process has been stopped.
	(3) Re-establish communication.
	(4) Output a communications analysis list, and analyze it.

##1337 [RX] Non-transmission monitoring timer (T.62 T1 timer) timed out

Cause: Expired in a fixed interval without receiving the data frame from the sending side without the document being transmitted.

Solutions:
(1) Check whether the other party's machine is working properly.
(2) Re-establish communication.
(3) Output a communications analysis list, and analyze it.

##1339 [RX] CDR reception

Cause: CDR received from the transmitting side with document procedures

Solutions:
(1) Check whether the other party's machine is working properly.
(2) Re-establish communication.
(3) Output a communications analysis list, and analyze it.

##1340 [RX] CDD reception

Cause: CDD received from the transmitting side with document procedures

Solutions:
(1) Check whether the other party's machine is working properly.
(2) Re-establish communication.
(3) Output a communications analysis list, and analyze it.

##1341 [TX] RDPBN reception

Cause: RDPBN received from the transmitting side with document procedures
The page could not be received correctly by the receiving side.

Solutions:
(1) Re-transmit from the page where the error occurred.
(2) Output a communications analysis list, and analyze it.

##1348 [TX/RX] Session layer abnormal (Document procedure)

Cause: Underfined document procedure frame received with document properties

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.

##1350 [RX] CSS parameter abnormal

Cause: Session procedures received, abnormality discovered in CSS contents

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.

##1351 [TX] RSSP (RSSN) parameter abnormal

Cause: Session procedures received, abnormality discovered in RSSP or RSSN contents

Solutions:
(1) Re-transmit.
(2) Output a communications analysis list, and analyze it..

##1352 [RX] CSE parameter abnormal

Cause: Session procedures received, abnormality discovered in CSE contents

Solutions:
(1) Re-establish communication.
(2) Output a communications analysis list, and analyze it.

##1353 [TX] RSEP parameter abnormal

Cause: Session procedures received, abnormality discovered in RSEP contents

Solutions: (1) Re-transmit.

      (2) Output a communications analysis list, and analyze it.

##1354 [RX] CSCC parameter abnormal

Cause: Session procedures received, abnormality discovered in CSCC contents

Solutions: (1) Re-establish communication.

      (2) Output a communications analysis list, and analyze it.

##1355 [TX] RSCCP parameter abnormal

Cause: Session procedures received, abnormality discovered in RSCCP contents

Solutions: (1) Re-transmit.

      (2) Output a communications analysis list, and analyze it.

##1372 [RX] CDS parameter abnormal

Cause: Document procedures received, abnormality discovered in CDS contents

Solutions: (1) Have the document set properly on the transmitting side.

      (2) Output a communications analysis list, and analyze it.

##1373 [RX] CDC parameter abnormal

Cause: Document procedures received, abnormality discovered in CDC contents

Solutions: (1) Re-establish communication.

      (2) Output a communications analysis list, and analyze it.

##1380 [RX] CDE parameter abnormal

Cause: Document procedures received, abnormality discovered in CDE contents

Solutions: (1) Re-establish communication.

      (2) Output a communications analysis list, and analyze it.

##1381 [TX] RDEP parameter abnormal

Cause: Document procedures received, abnormality discovered in RDEP contents

Solutions: (1) Re-transmit.

      (2) Output a communications analysis list, and analyze it.

##1386 [RX] CDPB parameter abnormal

Cause: Document procedures received, abnormality discovered in CDPB contents

Solutions: (1) Re-establish communication.

      (2) Output a communications analysis list, and analyze it.

##1387 [TX] RDPBP parameter abnormal

Cause: Document procedures received, abnormality discovered in RDPBP contents

Solutions: (1) Re-transmit.

      (2) Output a communications analysis list, and analyze it.

##1388 [RX] CDCL parameter abnormal

Cause: Document procedures received, abnormality discovered in CDCL contents

Solutions: (1) Check whether the other party's machine is working properly.

(2) Re-establish communication.

(3) Output a communications analysis list, and analyze it.

##1389 [TX] RDCLP parameter abnormal

Cause: Document procedures received, abnormality discovered in RDCLP contents

Solutions: (1) Check whether the transmitting machine has been stopped

(2) Re-transmit.

(3) Output a communications analysis list, and analyze it.

##1412 [TX] RDGR transmission

Cause: RDGR received during document procedures

Solutions: (1) Re-transmit.

(2) Output a communications analysis list, and analyze it.

##1413 [TX/RX] Abnormality discovered before session connection

Cause: Abnormality discovered in the procedures before session connection (below B-channel layer 4)

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

##1414 [TX/RX] Abnormality discovered in the session procedures after session connection

Cause: A frame which could not continue session procedures normally, or an undefined frame was received after session connection

Solutions: (1) Re-establish communication.

(2) Output a communications analysis list, and analyze it.

##1417 [TX] Monitoring timer time-out with no response (T.62 T2 timer)

Cause: Timed out without getting a response (layer 5 frame reception) from the receiving side during transmission

Solutions: (1) Confirm that the receiving machine is operating normally

(2) Re-transmit.

(3) Output a communications analysis list, and analyze it.

##1418 [TX/RX] CSA timer (T.62 T3 timer) time-out

Cause: CSA received, or timed-out with no RSAP response

Solutions: (1) Confirm that the other party's machine is operating normally

(2) Re-establish communication.

(3) Output a communications analysis list, and analyze it.

##1420 [TX/RX] Session layer protocol violation

Cause:	Negotiation made with a session windows size larger than 2
	(Run the machine only with the session windows size set at 1)
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.
	(3) Have the other party change the session windows size on their machine

##1600 [RX] Transmission error in layer 4 or below of B-channel

Cause:	Session procedures received, abnormality discovered in RSEP contents
Solutions:	(1) Re-transmit.
	(2) Output a communications analysis list, and analyze it.

##1601 [TX/RX] Connection parameter abnormalily in layer 4 connection (transport length)

Cause:	Indicated above
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.

##1603 [TX] Abnormal session control function parameter

Cause:	An abnormality occurred in the session control function parameter which indicates the transmission authority reversal.
Solutions:	(1) Re-transmit.
	(2) Output a communications analysis list, and analyze it.

##1608 [RX] P-START abnormality

Cause:	An abnormality occurred during P-START analysis.
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.

##1618 [RX] Error in presentation layer (layer 6)

Cause:	Error (Image end terminal detection, MMR error) in presentation layer
Solutions:	(1) Re-establish communication.
	(2) Output a communications analysis list, and analyze it.

##1620 [RX] D-channel -> B-channel connection timer timed-out

Cause:	Time-out when receiving with no B-channel connection, even though D-channel was connected
Solutions:	(1) Check whether the other party's machine is working properly.
	(2) Output a communications analysis list, and analyze it.

4.3 Errors not Shown on the Display
4.3.1 General errors
- **The unit does not power on. (Evaluation criteria: Look at the actual unit.)**
  (1) Check the power cord connection.
  (2) Check the connection between the PCNT board (J403) and power supply unit.
  (3) Check the connection between the SCNT board (J1) and power supply unit.
  (4) Check the connection between the SCNT board (J8) and PCNT board (J201)
  (5) Check the power supply unit's fuse (FU101).
  (6) Replace the power supply unit.

- **Abnormal display. (Applicable test mode: Operation panel test)**
  Nothing is displayed.
  (1) Check the connection between the operation panel unit and SCNT board (J7).
  (2) Replace the operation panel unit.
  (3) Replace the SCNT board.

  Part of the LCD panel does not display anything.
  (1) Check for LCD problems with the test mode.
  (2) Check the connection between the operation panel unit and SCNT board (J7).
  (3) Replace the operation panel unit. (Faulty LCD)
  (4) Replace the SCNT board.

- **The buttons do not work. (Applicable test mode: Operation panel test)**
  (1) If the test mode can be used, check for faulty buttons.
  (2) Check the connection between the operation panel unit and SCNT board (J7).
  (3) Replace the operation panel unit.
  (4) Replace the SCNT board.

- **No sound from the speaker**
  (1) Check the connection of the speaker and SCNT board (J3).
  (2) Replace the speaker.
  (3) Replace the G4 board.
  (4) Replace the SCNT board.

4.3.2 Printing problems
• **Faulty printing (Evaluation criteria: Test print is faulty.)**
  • **The paper is not fed correctly. (Evaluation criteria: Look at the actual unit.)**
    The main motor does not run.
    (1) Check the main motor's resistance. $1.62 \sim 1.98\ \Omega/1$ phase is normal. (*Fig. 3-4*)
    (2) Replace the main motor.
    (3) Replace the PCNT board.
    (4) Replace the SCNT board.

Main motor

Main motor connector

1-2 : $1.62\sim1.98\Omega$
3-4 : $1.62\sim1.98\Omega$

4

1
Figure 3-4 Main Motor Connector

The paper is not picked up from the auto sheet feeder.
(1) Check whether the recommended paper is used.
(2) Check whether more than 100 sheets of paper have been loaded in the auto sheet feeder.
(3) Check whether the paper has been loaded into the sheet feeder correctly.
(4) Check the connection between the paper pickup solenoid and the power supply unit (J204).
(5) Replace the paper pickup solenoid.
(6) Clean the separation pad.
(7) Replace the separation pad.
(8) Replace the separation pad spring or the lifting spring.
(9) Replace the SCNT board.

The paper skews.
(1) Check whether the recommended paper is used.
(2) Check whether more than 100 sheets of paper have been loaded in the sheet feeder.
(3) Check whether the paper has been loaded into the sheet feeder correctly.
(4) Check whether dust or paper debris have built up inside the auto sheet feeder.
(5) Check whether the paper pickup roller, or any other rollers, are damaged or scratched.

• **The printing operation is abnormal.**
  The unit indicates there is a paper jam when there is no paper jam.
  (1) Check the connection from the paper edge sensor to the PCNT board (J204).
  (2) Check whether the paper edge sensor and actuator and the paper eject sensor actuator are in their correct positions.
  (3) In test mode check whether the paper edge sensor and the paper eject sensor are operating correctly.
  (4) Check the connection between the main motor and the PCNT board (J401).
  (5) Replace the main motor.
  (6) Replace the PCNT board.
  (7) Replace the SCNT board.

• Poor printing quality (Evaluation criteria: Check the test print image's faults.)

Before checking for the cause of print defects, check whether the user uses Canon-recommended paper and stores it correctly. If the problem is solved by using the recommended paper, the customer should be advised to use the recommended paper and store it correctly.

Light	Dark	Completely blank	All black

Dots	Marks on back of paper	Black vertical lines	Irregular and smudged blackverticallines

Irregular and smudged black horizontal lines	Marks	Blank spots

White vertical lines	White horizontal lines	Faulty registration	Poor fixing

Distortion nBD failure	Partially compressed/stretched image
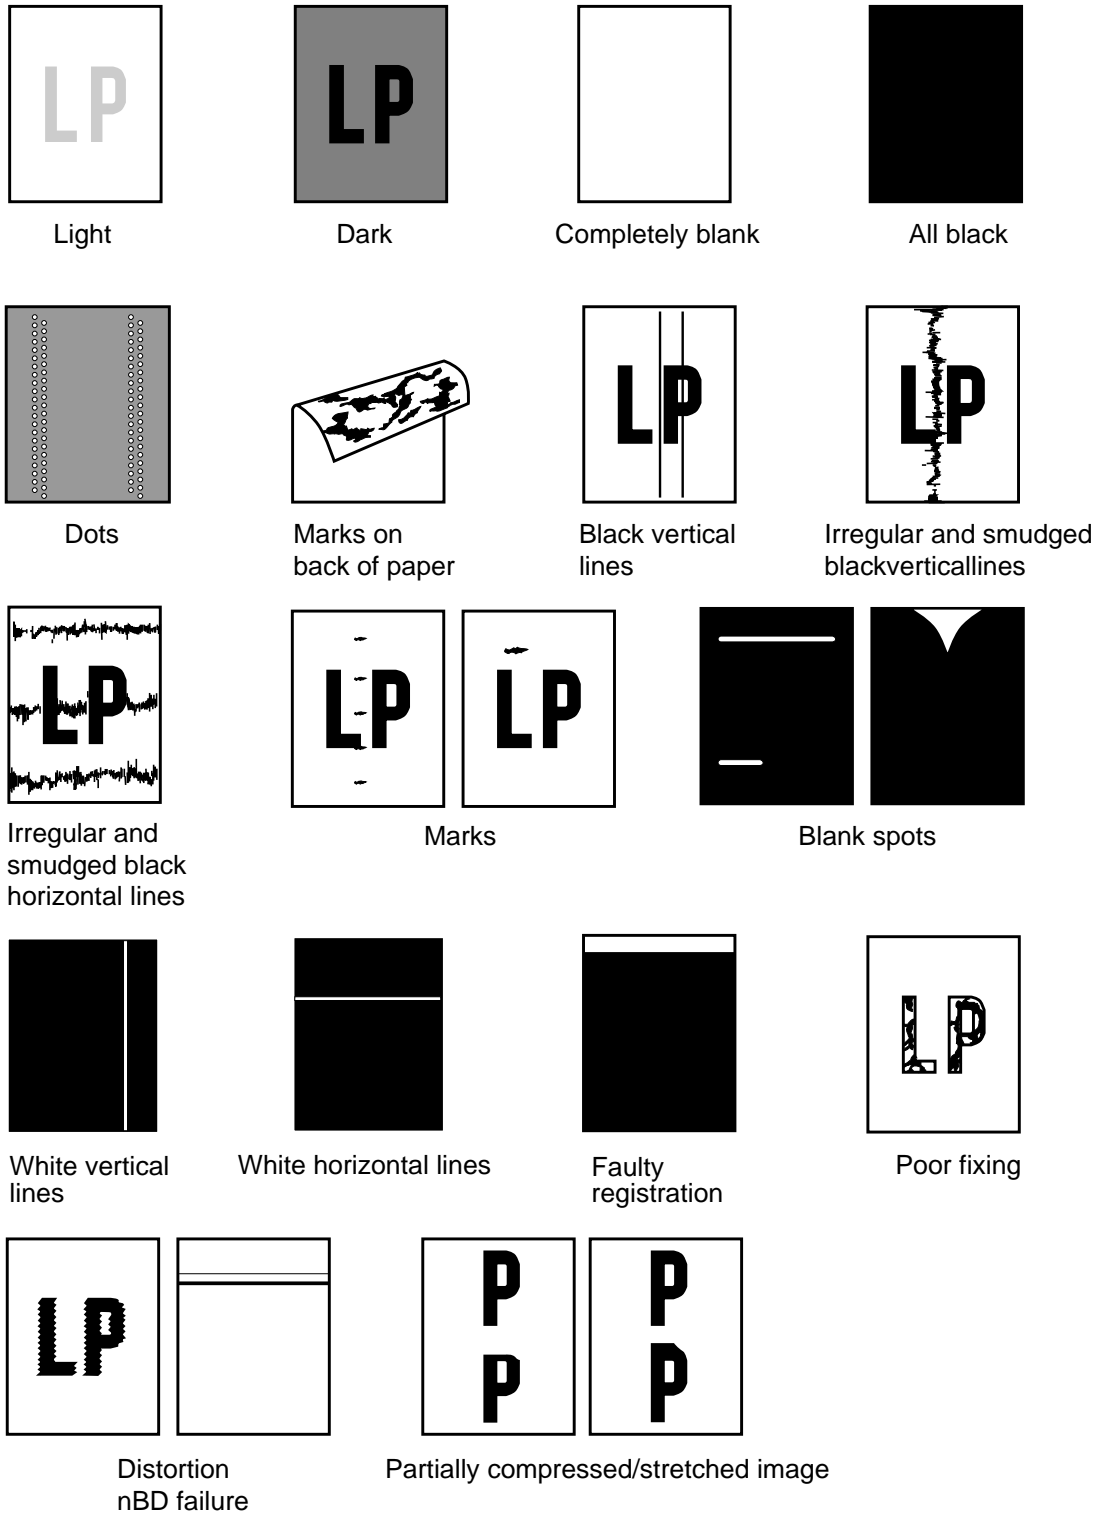

Figure 3-5 Faulty Print Samples

• Light

Solutions:	(1)	Remove the toner cartridge and shake it lightly five or six times.
	(2)	Verify that user data setting "TONER SAVING" is not "ON".
	(3)	Replace the toner cartridge.
	(4)	Open the front cover during printing, and remove the toner cartridge. Open the cartridge drum cover shutter manually, and check whether the toner image on the photosensitive drum is transferred onto the paper. If it is transferred, go to item (7). If not, go the following step.
	(5)	Clean the transfer bias contact and the transfer charging roller shaft contact.
	(6)	Replace the transfer charging roller.
	(7)	Clean the developing bias contact and the toner cartridge contact.
	(8)	Replace the PCNT board.
	(9)	Replace the power supply unit.
	(10)	Replace the LASER/scanner section.
	(11)	Replace the SCNT board.

• Dark

Solutions:	(1)	Verify that user data setting "TONER SAVING" is not "OFF".
	(2)	Clean the drum ground contact and the toner cartridge contact
	(3)	Clean the primary charging contact and the toner cartridge contact.
	(4)	Replace the LASER/scanner section.
	(5)	Replace the SCNT board.

• Completely blank

Solutions:	(1)	Clean the developing bias contact and the toner cartridge contact.
	(2)	Check whether the projection for opening and closing the LASER shutter on the toner cartridge is damaged.
	(3)	Check the voltage connector (PCNT : J402) for the high-voltage power circuit.
	(4)	Replace the PCNT board.
	(5)	Replace the power supply unit.
	(6)	Replace the LASER/scanner section.
	(7)	Replace the SCNT board.

• All black

Solutions:	(1)	Replace the toner cartridge.
	(2)	Clean the primary charging contact and the toner cartridge contact.
	(3)	Replace the PCNT board.
	(4)	Replace the power supply unit
	(5)	Replace the LASER/scanner section.
	(6)	Replace the SCNT board.

• Dots

Solutions:	(1)	Clean the static charge eliminator in the toner transfer section.
	(2)	Check the static charge eliminator contact.
	(3)	Clean the transfer charging roller.
	(4)	Replace the transfer charging roller.

• Marks on back of paper

Solutions:	(1) Copy a few white paper documents.
	(2) If the marks are at intervals of approx. 50mm (1.96"), clean the transfer charging roller, but if they are at intervals of approx. 63mm (2.48"), clean the pressure roller.
	(3) Clean the paper feed guide and fixing entrance guide.
	(4) Replace the transfer charging roller.
	(5) Replace the pressure roller.

• Black vertical lines

Solutions:	(1) Open the front cover during printing, and remove the toner cartridge. Open the cartridge drum cover shutter manually, and check whether there are black vertical lines on the photosensitive drum. If there are black lines, replace the toner cartridge. If not, go the following step.
	(2) Clean the face-down eject roller.
	(3) Clean the fixing entrance guide.
	(4) Replace the fixing ass'y.

• Irregular and smudged black vertical lines

Solutions:	(1) Clean the fixing entrance guide.
	(2) Replace the toner cartridge.

• Irregular and smudged black horizontal lines

Solutions:	If the irregular smudged black lines occur cyclically, replace the toner cartridge. If they are non-cyclical, replace the fixing ass'y.

• Marks

Solutions:	(1) If the marks are at intervals of approx. 50mm (1.96"), clean the transfer charging roller; if they are at intervals of approx. 75mm (2.95"), clean the fixing ass'y; and if they are at intervals of approx. 75mm (2.95"),or 38mm (1.5"), replace the toner cartridge.
	(2) Clean the paper feed guide.
	(3) Clean the fixing entrance guide.

• Blank spots

Solutions:	(1) Clean the transfer charging roller.
	(2) Replace the transfer charging roller.
	(3) Replace the toner cartridge.
	(4) Check for foreign matter button the transfer charging roller gear and the drive gear.
	(5) Clean the developing bias contact and the toner cartridge contact.
	(6) Replace the PCNT board.
	(7) Replace the power supply unit.
	(8) Replace the SCNT board.

• White vertical lines

Solutions:	(1)	Remove the toner cartridge and shake it lightly five or six times.
	(2)	Open the toner cartridge drum shutter and if there are vertical white lines on the photosensitive drum, replace the toner cartridge.
	(3)	Check for foreign matter stuck in the LASER output hole on the LASER/scanner section or the LASER input hole on the toner cartridge.
	(4)	Clean the face-up eject roller.
	(5)	Clean the fixing entrance guide.
	(6)	Replace the fixing ass'y.
	(7)	Replace the LASER/scanner section.

• White horizontal lines

Solutions:	(1)	Replace the toner cartridge.
	(2)	Replace the fixing ass'y.

• Faulty registration

Solutions:	(1)	Check if more than the regulation amount of paper is loaded in the sheet feeder.
	(2)	Clean the paper pickup roller.
	(3)	Replace the paper pickup roller.
	(4)	Check whether the paper edge sensor actuator is damaged or deformed.
	(5)	Replace the pickup solenoid.
	(6)	Replace the paper edge sensor.
	(7)	Replace the SCNT board.

• Distortion/BD signal failure

Solutions:	(1)	Check the connection between the LASER/scanner section and PCNT board (J203) connector connections.
	(2)	Replace the LASER/scanner section.
	(3)	Replace the PCNT board.

• Partially compressed/stretched image

Solutions:	(1)	Check for foreign matter between the toner cartridge gear and the drive gear.
	(2)	Check if the toner cartridge gear is broken.
	(3)	Replace the toner cartridge.

• Poor fixing

Solutions:	(1)	If the marks are at intervals of approx. 75mm (2.95"), clean the fixing ass'y;if they are at intervals of approx. 63mm (2.48"), clean the pressure roller.
	(2)	Replace the fixing ass'y.
	(3)	Replace the pressure roller.
	(4)	See the next page, and check the nip width of the fixing section. If it is not as specified, replace the fixing pressure plate.

NOTE
Checking the fixing nip width
Improperly set fixing nip may cause a fixing ass'y problem. The fixing ass'y is not designed to allow adjustment of the nip.
Check the fixing ass'y nip by using the following procedure.

(1) Either take along one or two all-black copies of A4 or letter size made with a copier, or make one using a copier at the customer site.
(2) Set the black copy in the sheet feeder with the black side facing up.
(3) Change the paper delivery selector to the face-up delivery slot.
(4) Enter the test mode and run [3] PRINT, [6] ENDURANCE.
(5) Turn the power off when the beginning of the paper appears in the face-up delivery slot. Turn the power off, wait for 10 seconds, and remove the paper from the face-up delivery slot slowly.
(6) Measure the widths of the areas on the paper where toner luster is visible and check whether they fall within the range shown in below table.
	Dimension
b	3.0 to 5.0 mm (0.12" to 0.20")
|a - c|	0.5 mm (0.02") or less
|a - b|	1.0. mm (0.04") or less
|b - c|	1.0. mm (0.04") or less

Figure 3-6 Fixing Nip Width

4.3.3 Scanning problems

• **Faulty scanning (Evaluation criteria: Test print is good, but the copied image is poor.)**

• **The document is not fed.**

The document feed motor does not run. (Evaluation criteria: Check it visually.)

(1) Check the connection between the document feed motor and the PCNT board (J401).

(2) Check the document feed motor's resistance. 5.6 ~ 6.8 Ω/1 phase is normal. (*Fig. 3-7*)

(3) Replace the document feed motor.

(4) Replace the PCNT board.

(5) Replace the SCNT board.

The document slips against the rollers. (Evaluation criteria: Check it visually. Stretched copy image.)

(1) See *page 3-4* and clean the document reading section.

(2) Replace the reading section's rollers.

The document does not separate. (Evaluation criteria: Check it visually.)

(1) Check whether the document feed motor is driving all the rollers. (Check for any damaged gears or foreign matter stuck inside.)

(2) Check whether the document feed lever is set to manual document feed.

(3) See *page 3-4* and clean the separation roller and separation guide.

(4) Replace the separation roller and separation guide.

The scanner unit's sensors are defective (Evaluation criteria: The placed document or transported document is not detected.)

(1) Check for any faulty sensors while executing the copying operation and test mode.

(2) Check the connection between the operation panel unit and the SCNT board (J7).

(3) Replace operation panel unit.

(4) Replace the SCNT board.

To document feed motor

4

1
Document feed motor connector

1-2 : 5.6~6.8Ω
3-4 : 5.6~6.8Ω

Figure 3-7 Document Feed Motor Connector

- **The reading image is abnormal. (Evaluation criteria: Check the copy image's faults.)**

  Nothing is printed.

  (1) Check the connection between the contact sensor and SCNT board (J6).

  (2) Replace the contact sensor unit.

  (3) Replace the SCNT board.

  The image has vertical stripes.

  (1) Clean the contact sensor's scanning glass.

  (2) Check the connection between the contact sensor and SCNT board (J6).

  (3) Replace the contact sensor unit.

  The image has thick vertical stripes.

  (1) Clean the contact sensor's scanning glass.

  (2) Check the connection between the contact sensor and SCNT board (J6).

  (3) Replace the contact sensor unit.

4.3.4 Communication problems

- **D-channel connection error (Service error code "##1001~##1131")**

  (1) Set #4B ISDN BASIC Bitswitch SW03 bit2 to "1".

  (2) Set #4B ISDN BASIC Bitswitch SW03 bit4 to "1".

  (3) Set #4B ISDN BASIC Bitswitch SW03 bit5 to "0".

  (4) Set #4B ISDN BASIC Bitswitch SW08 bit2 to "0".

  (5) Set #4B ISDN BASIC Bitswitch SW01 bit4 to "1" and #4B ISDN BASIC Numeric No.19 to "3".

  (6) Set #4B ISDN BASIC Bitswitch SW06 bit0 to "1".

- **Cannot perform G4 communication (After a G4 call, fall back to G3. Communication will complete normally.)**

  (1) Confirm whether or not the receiving side is using G4FAX.

  (2) Set #4B ISDN BASIC Bitswitch SW03 bit2 to "1".

  (3) Set #4B ISDN BASIC Bitswitch SW03 bit4 to "1".

- **Cannot receive**

  (1) When SYSTEM SETTINGS "CHECK RX ID" is set to "ON", confirm whether the telephone number in the USER SETTINGS "ENTER ISDN NO." contract is registered or not.

  (2) When the machine is included in the same bus, and multiple terminals are connected, make sure that the telephone number in the USER SETTINGS "ENTER ISDN NO." contract is not duplicated in other terminals.

  (3) When SYSTEM SETTINGS "RX RESTRICTION" is set to "ON", register the telephone munber of the one-touch dial or coded dial contract.

5. SERVICE SWITCHES

5.1 Hardware Switches

None.

5.2 Service Data Settings

Service data can be checked and changed with items on display menus. The default values of the SSSW/ parameters available in this fax machine are shown in *this Chapter, 5.2.3 Service data settings* in this manual. The SSSW/parameters given in the previous product-specific manual are explained in the *G3 Facsimile Service Data Handbook*. The new switches for this model are described in *this Chapter, 5.2.5 New SSSWs/parameters added to this model*.

5.2.1 Service data overview

The service data menu items are divided into the following ten blocks.

#1 SSSW (Service Soft Switch settings)

These setting items are for basic fax service functions such as error management, echo countermeasures, and communication trouble countermeasures.

#2 MENU (MENU switch settings)

These setting items are for functions required during installation, such as NL equalizer and transmission levels.

#3 NUMERIC Param. (NUMERIC parameter settings)

These setting items are for inputting numeric parameters such as the various conditions for the FAX/TEL switching function.

#4A SPECIAL (SPECIAL switch settings)

These setting items are for special functions.

#4B ISDN (ISDN settings)

These settings items are for the purpose of controlling the D-channel protocol and the B-channel protocol.

#5 TYPE (TYPE setting)

The type setting makes the service data conform to a specific nation's communications standards.

#6 GENESIS (UHQ function setting)

These setting items are for scanned image processing functions such as edge enhancement and error diffusion processing.

#7 PRINTER (PRINTER function settings)

These setting items are for basic printer service functions such as the reception picture reduction conditions. Also there is an item for resetting the printer section without switching the power off-on.

#8 CLEAR (data initialization mode)

Various data are initialized by selecting one of these setting items. There is a setting item for checking/inputting the total number of pages printed and total number of pages scanned by this fax.

#9 ROM (ROM management)

ROM data such as the version number and checksum are displayed.

#10 REPORT (Service report output function)

The service report can be output in three types of forms.

5.2.2 Service data registration/setting method

Service data can be registered and set by the following operations:

```
┌──────────────────────────────┐
│  22/02 1999          10:00   │ Standby
└──────────────────────────────┘
        (1) User data mode selection
            Press the FUNCTION button, and then > button.
┌──────────────────────────────┐
│  USER SETTINGS               │
└──────────────────────────────┘
        (2) Service data mode selection
            Press the  #  button.

No. 01, 05 to 08, 12 and 14 to 30 are not used. Do not change their settings.

NOTE

Regarding the T0 timer (SSSW #3 NUMERIC Param. No. 10)
When the country type (SSSW #5 TYPE) is set to "FRANCE," the default value of SSSW#3 NUMERIC Param. No.10 is "4000," but the actual T0 timer is 140 seconds. However, when this default value is changed, the settable range of the T0 timer becomes 0-99.99 seconds. For example, if the SSSW #3 NUMERIC Param. No.10 is set to "5000," the T0 timer is 50 seconds. In addition, after changing the default value, even if the "4000" is reset, the T0 timer will be no 140 seconds, but 40 seconds. To return the T0 timer to 140 seconds, set the SSSW #5 TYPE to "FRANCE."

REFERENCE

This page intentionally left blank

5.2.4 Explanation of service data

a) SSSW (Service Soft Switch settings)

The items registered and set by each of these switches comprise 8-bit switches. The figure below shows which numbers are assigned to which bits. Each bit has a value of either 0 or 1.
Figure 3-16 Bit Switch Display

See the chart in the service data shown in *this Chapter, 5.2.3 Service data settings* to see effective bits and their default values. With the exception of new switches added to this model the meanings (functions) of the bits are not described in this manual except the new switches added to this model. See *the G3 Facsimile Service Data Handbook* (supplied separately) for details of the switches.

Below are examples showing how to read bit switch tables.

Bit	Function	1	0
0	Service error code	Output	**Not Output**
1	Error dump list	Output	**Not Output**
2	Not used		
3	Copy function	No	**Yes**
4	##300 series service error code	Output	**Not Output**
5	Not used		
6	Date & Time setting restriction	Setting restricted	**Setting possible**
7	User setting restriction	Setting possible	**Setting restricted**

Figure 3-17 How to Read Bit Switch Tables

5.2.5 New SSSWs/parameters added to this model

#1 SSSW (service soft switch setting)

SW01 (service soft switch 01: error management)

Bit	Function	1	0
0	Service error code	Output	**Not output**
1	Error dump list	Output	**Not output**
2	Rx image data transfer	Yes	**No**
3	Copy function	No	**Yes**
4 (New)	##300 series service error code	**Output**	Not output
5	Not used		
6	Date & Time setting restriction	Setting restricted	**Setting possible**
7	User setting restriction	Setting possible	**Setting restricted**

[Bit 4]

Even when Bit0 is set to "**NOT OUTPUT**", you can select whether or not to output ##300 series Service Error Codes, caused by hardware malfunction.

When "**OUTPUT**" is selected, ##300 series Service Error Codes are displayed and included in reports.

When "**NOT OUTPUT**" is selected, no Service Error Codes are displayed.

#3 NUMERIC PARAM. (numeric parameter settings)

No.	Function	Selecting range	Default setting
10	T0 Timer	0-9999	5500 (55 sec.)
11	T1 Timer (Rx)	0-9999	3500 (35 sec.)
13	Maximum time to receive one line of image data	500-3000	1300 (13 sec.)

[No. 10]

The "wait time after transmission of a dialing signal ends until a significant signal is detected in transmission" was formerly designated as T1 timer with parameter 10.

> The T1 timer for the transmitter (wait time after a significant CED or V21 flag significant signal is detected until the next significant signal is detected) is fixed at 35 seconds.

NOTE

[No. 11]

Set the T1 timer for the receiver (wait time after DIS transmission starts until a significant signal is received.)

If frequent errors occur during reception (2 instances) because of line connection conditions, raise the value of this parameter.

[No. 13]

Set the maximum time to receive one line of image data when image data is received.

If the other party is a computer fax and the time to receive one line of image data is long, raise the value of this parameter to increase the maximum reception time.

#4B ISDN (ISDN settings)
ISDN BASIC Bitswitch SW01

Bit	Function	1	0
0	Not used		
1	Not used		
2	Not used		
3	Not used		
4	Progress Indicator for outgoing Speech calls	Add	**Don't Add**
5	Progress Indicator for outgoing 3.1kHz-audio calls	**Add**	Don't Add
6	Not used		
7	Not used		

[Bit 4]

For outgoing G3 calls made with Bearer Capability "Speech", the Progress Indicator information element in the SETUP message can be chosen as "Add" or "Don't Add". The "progress description" included in the Progress Indicator information element takes on the same value as that set in #4B ISDN BASIC Numeric Parameter No.19.

In an outgoing G3 call, when an switching equipment exists which cannot receive unless a Progress Indicator information element which includes an appropriate "progress description" is added to the SETUP message, please set this bit to "1".

[Bit 5]

For outgoing G3 calls made with Bearer Capability "3.1kHz audio", the Progress Indicator information element in the SETUP message can be chosen as "Add" or "Don't Add." The "progress description" included in the Progress Indicator information element takes on the same value as that set in #4B ISDN BASIC Numeric Parameter No.18.

ISDN BASIC Bitswitch SW02

Bit	Function	1	0
0	Not used		
1	Send RELCOMP message when incoming call is rejected	Yes	**No**
2	G4/G3 automatic fallback	No	**Yes**
3	Speech fallback	No	**Yes**
4	Not used		
5	Not used		
6	Not used		
7	Not used		

[Bit1]

When the incoming call is impossible because transmission is in progress, sending of the RELCOMP message can be set to either "Yes" or "No."

[Bit2]

For outgoing G4 calls, automatic fallback from G4 to G3 can be set to either "Yes" or "No". In an outgoing G4 call where this bit is set to "0," if the network gives notification of a "cause number" which corresponds to an error code set in #4B ISDN BASIC G4/G3 Fallback, an outgoing G3 call will be made after the machine makes one open call.

[Bit3]

For outgoing G3 calls, automatic fallback from "3.1kHz audio" to "Speech" can be set to either "Yes" or "No". In this machine, with a regular outgoing G3 call, the Bearer Capability information element in the SETUP message is set to "3.1kHz audio". In an outgoing G3 call where this bit is set to "0," if the network gives notification of a "cause number" which corresponds to an error code set in #4B ISDN BASIC Speech Fallback after the machine makes one open call, the Bearer Capability information element in the SETUP message is set to "Speech," and an outgoing G3 call is made.

ISDN BASIC Bitswitch SW03

Bit	Function	1	0
0	Not used		
1	Not used		
2	Outgoing G4 call HLC	Don't Add	**Add**
3	Action for incoming G4 when no G4HLC	Incompatible destination	**G4 reception**
4	Outgoing G4 call LLC	Don't Add	**Add**
5	Outgoing G3 call LLC	**Don't Add**	Add
6	Fallback table reference for enforced fallback	**Yes**	No
7	Not used		

[Bit2]

For outgoing G4 calls, the High Layer Compatibility information element in the SETUP message can be set to "Add" or "Don't Add." In an outgoing G4 call, if the High Layer Compatibility information element in the SETUP message is added when an Switching equipment exists which cannot receive, please set this bit to "1."

[Bit3]

For incoming G4 calls, when the High Layer Compatibility information element is not added to the SETUP message (Bearer Capability information element "Unrestricted digital" in the SETUP message), the choice can be made to either not receive as "incompatible destination", or to "G4 reception".

[Bit4]

For outgoing G4 calls, the Low Layer Compatibility information element in the SETUP message can be set to "Add" or "Don't Add." In an outgoing G4 call, if the Low Layer Compatibility information element in the SETUP message is added when an Switching equipment exists which cannot receive, please set this bit to "1."

[Bit5]

For outgoing G3 calls, the Low Layer Compatibility information element in the SETUP message can be set to "Add" or "Don't Add." In an outgoing G3 call, if the Low Layer Compatibility information element in the SETUP message is not added when an Switching equipment exists which cannot receive, please set this bit to "0."

[Bit6]

Normally, even with the one condition for operation of enforced G4/G3 fallback, "normal D-channel disconnection," even when a D-channel error occurs with this switch, the choice can be made to enforce or not enforce G4/G3 fallback by selecting "Yes" or "No". If this bit is set to "1," in an outgoing G4 call, even if the network notifies of a "cause number" corresponding to an error code set in #4B ISDN BASIC G4/G3 Fallback, the G4/G3 fallback function is available. However, when #4B ISDN BASIC Bitswitch SW08 bit4 is "0," this function becomes invalid.

ISDN BASIC Bitswitch SW06

Bit	Function	1	0
0	Sending Complete information element	Add	**Don't Add**
1	Not used		
2	Not used		
3	Not used		
4	Not used		
5	Not used		
6	Low Layer Compatibility	Don't Add	**Add**
7	High Layer Compatibility	Don't Add	**Add**

[Bit0]

For outgoing calls, the Sending Complete information element in the SETUP message can be set to "Add" or "Don't Add." In an outgoing call, if the Sending Complete information element in the SETUP message is not added when an Switching equipment exists which cannot receive, please set this bit to "1." Additionally, only in the case of "ITALY", this bit's default value is "1."

[Bit6]

For all outgoing calls, the Low Layer Compatibility information element in the SETUP message can be set to "Add" or "Don't Add." #4B ISDN BASIC Bitswitch SW03 bit4 and bit5 settings will be valid only when this bit is set to "0."

[Bit7]

For all outgoing calls, the High Layer Compatibility information element in the SETUP message can be set to "Add" or "Don't Add." #4B ISDN BASIC Bitswitch SW03 bit2 and #4B ISDN BASIC Bitswitch SW08 bit2 settings will be valid only when this bit is set to "0."

ISDN BASIC Bitswitch SW07

Bit	Function	1	0
0	Not used		
1	Not used		
2	Not used		
3	Not used		
4	Keep D-channel message log	Don't Save	**Save**
5	Not used		
6	Not used		
7	Not used		

[Bit4]

It is possible to choose to "Save" or "Don't Save" D-channel message logs as D-channel protocol dumps.

ISDN BASIC Bitswitch SW08

Bit	Function	1	0
0	Not used		
1	Not used		
2	Outgoing G3 call HLC	**Don't Add**	Add
3	Not used		
4	G4/G3 enforced fallback	**Yes**	No
5	Calling Party Number coding change	National Numbering Plan/ISDN	**Unknown (TON/NPI)**
6	Called Party Number coding change	National Numbering Plan/ISDN	**Unknown (TON/NPI)**
7	Connected Number coding change	National Numbering Plan/ISDN	**Unknown (TON/NPI)**

[[Bit2]

For outgoing G3 calls, the High Layer Compatibility information element in the SETUP message can be set to "Add" or "Don't Add." In an outgoing G3 call, if the High Layer Compatibility information element in the SETUP message is not added when an Switching equipment exists which cannot receive, please set this bit to "0."

[Bit4]

For outgoing G4 calls, if B-channel communication is not completed normally after D-channel connection, it is possible to choose to fallback to G3 and call again or not to do so by selecting "Yes" or "No."

[Bit5]

It is possible to choose either "Unknown" or "National Numbering Plan/ISDN" for the coding of the "Type of Number (TON)" in the Calling Party Number information element and that of the "Numbering Plan Identification (NPI)," both of which are included in the SETUP message.

[Bit6]

It is possible to choose either "Unknown" or "National Numbering Plan/ISDN" for the coding of the "Type of Number (TON)" in the Called Party Number information element and that of the "Numbering Plan Identification (NPI)," both of which are included in the SETUP message.

[Bit7]

It is possible to choose either "Unknown" or "National Numbering Plan/ISDN" for the coding of the "Type of Number (TON)" in the Connected Number information element and that of the "Numbering Plan Identification (NPI)," both of which are included in the CONN message.

ISDN BASIC Bitswitch SW13

Bit	Function	1	0
0	Not used		
1	Not used		
2	Bearer Capability of ON-HOOK call	Speech	**3.1kHz audio**
3	Not used		
4	Not used		
5	Not used		
6	Operations performed after global number incoming call	Don't respond	**Respond**
7	Not used		

[Bit2]

For on-hook outgoing calls, it is possible to choose either "3.1kHz audio" or "Speech" for the Bearer Capability information element included in the SETUP message.

[Bit6]

When the SYSTEM SETTINGS "CHECK RX ID" is "ON," "Respond" or "Don't respond" can be selected with regard to the global number incoming call (no Called Party Number in SETUP message). The main function is only available when the SYSTEM SETTINGS "CHECK RX ID" is "ON."

ISDN BASIC Numeric parameter

No.	Function	Selecting range	Default setting
16	Fallback Wait Time	0-255 (×100msec.)	0 (0msec.)
18	Value of 3.1kHz-audio call-time progress description	0-127	3
19	Value of speech call-time progress description	0-127	0

[No.16]

In the case of an outgoing G4 call to G3, or an outgoing G3 Bearer Capability "3.1kHz audio" call which falls back to Bearer Capability "Speech," it is possible to set the wait time. Specifically, wait time is the interval from when the RELCOMP message is received from the network to when the machine sends the SETUP message. In reality, the time when the switch is set + the interval of approx. 100msec.~200msec. when the machine performs internal processing is wait time.

[No.18]

The "progress description" of the Progress Indicator information element which is added to the SETUP message can be designated for 3.1kHz audio outgoing calls.

The only defined values for progress description are 1-5 and 8.

Progress description:

No.1 Calling is not end-to-end ISDN; further call progress information may be available in-band

No.2 Destination address is non ISDN

No.3 Origination address is non ISDN

No.4 Call has returned to the ISDN

No.5 Interworking has occurred and has resulted in a telecommunication service change

No.8 In-band information or an appropriate pattern is now available

[No.19]

The "progress description" of the Progress Indicator information element which is added to the SETUP message can be designated for outgoing speech calls.

The only defined values for progress description are 1-5 and 8.

Progress descripion: As previously mentioned

This page intentionally left blank

ISDN BASIC Redial Code

No.	Function	Selecting range	Default setting
01-128	Redial	1001-1131	See page 3-80~3-83

ISDN BASIC G4/G3 Fallback

No.	Function	Selecting range	Default setting
01-128	G4/G3 fallback	1001-1131	See page 3-83~3-85

ISDN BASIC Speech Fallback

No.	Function	Selecting range	Default setting
01-128	Speech fallback	1001-1131	See page 3-86~3-88

[Redial]

If a D-channel protocol error occurs with an outgoing call, the 4-digit error code displayed on the LCD of the machine's this switch or on the report can be registered so that, from the next outgoing call onwards, if the same error occurs, the machine will redial.

[G4/G3 Fallback]

If a D-channel protocol error occurs with an outgoing G4 call, the 4-digit error code displayed on the LCD of the machine's switch or on the report can be registered so that, from the next outgoing call onwards, if the same error occurs, the machine will make an outgoing G3 call after making one public call.

[Speech Fallback]

If a D-channel protocol error occurs with an outgoing G3 call with Bearer Capability "3.1kHz audio," the 4-digit error code displayed on the LCD of the machine's switch or on the report can be registered so that, from the next outgoing call onwards, if the same error occurs, the machine will make an outgoing G3 call with Bearer Capability "speech" after making one public call.

NOTE

The error codes registered in #4B ISDN BASIC "Redial Code," "G4/G3 Fallback," and "Speech Fallback" can contain a maximum of 128 characters each.

Please do not clear or otherwise change the value registered in #4B ISDN BASIC "Redial Code," "G4/G3 Fallback," and "Speech Fallback." It is feared that trouble with communication will occur.

Example) G4/G3 Fallback function and operation procedure

• In the case where the FAX-L260i makes on outgoing G4 call to a G3 machine

a) After the FAX-L260i sends the SETUP message which includes the Bearer Capability information element "unrestricted digital." notification of a DISC message containing Cause number "88" is made from the network, and a D-channel connection error occurs. Cause number "88" means "Incompatible Destination." and the FAX-L260i displays the service error code "##1088." The "cause number" is set to the clearing message first notified by the network (DISC message, REL message, or RELCOMP message).
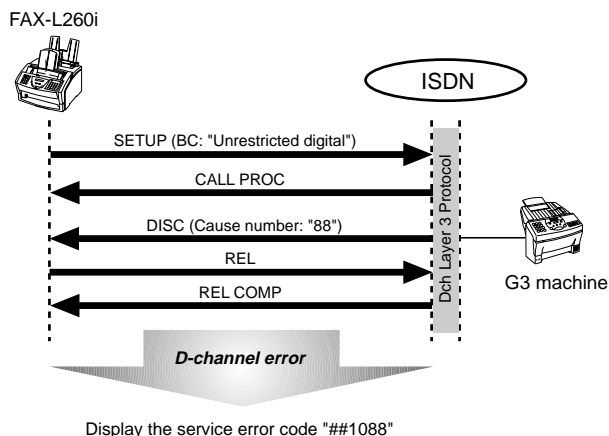

Figure 3-18 G4 -> G3 Fallback Procedure (1)

b) Next, the 4 digits "1088" of the service error code "##1088" are registered in service data #4B ISDN BASIC G4/G3 Fallback, and another outgoing call is made to the G4. In this situation, with the first outgoing call, a) D-channel cannot be connected in the same way, but after receiving the RELCOMP message from the network, the Bearer Capability information element included in the SETUP message is changed from "unrestricted digital" to "3.1kHz audio" and the SETUP message is sent again.
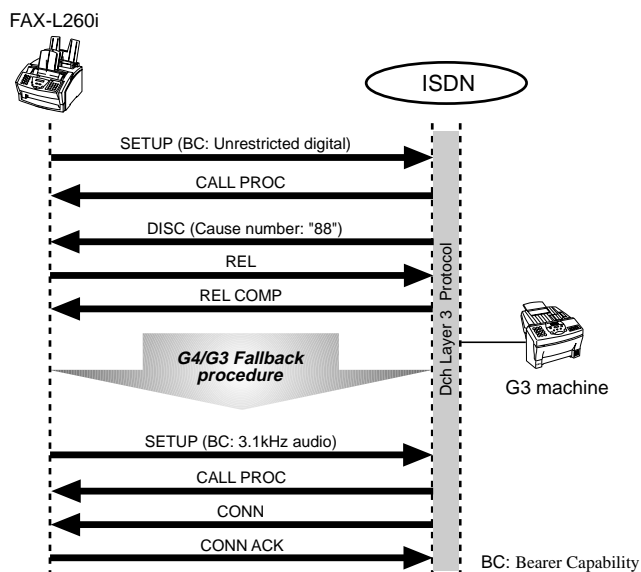

Figure 3-19 G4 -> G3 Fallback Procedure (2)

ISDN G4 Bitswitch SW01

Bit	Function	1	0
0	Not used		
1	Not used		
2	Not used		
3	Not used		
4	Not used		
5	Not used		
6	G4 B-channel Log Mode	All Communications	**Only Error Communications**
7	G4 B-channel communication log	**Prohibited**	permitted

[Bit6]

It is possible to choose whether the G4 B-channel communications log will gather "Only Error Communications" or "All Communications."

[Bit7]

It is possible to choose whether the G4 B-channel communications logging and output will be "Permitted" or "Prohibited."

ISDN G3 Bitswitch SW01

Bit	Function	1	0
0	Enforced G3 calling	Yes	**No**
1	Not used		
2	Not used		
3	Not used		
4	Not used		
5	Not used		
6	Not used		
7	Not used		

[Bit0]

When the main bit is "0," the outgoing call is made with the designated mode, but when the main bit is "1," it is made with G3 mode as default. For example, even in cases where the outgoing call is made with one-touch dial and coded dial designated by TX mode "G4," the call will be made with G3 mode.

ISDN G3 Numeric parameter

No.	Function	Selecting range	Default settings
01	Length of outgoing DTMF signal	10-9999	90 (90msec.)
02	Length of minimum pause for outgoing DTMF signal	10-9999	90 (90msec.)

[No.01]

It is possible vary the transmission time of the DTMF signal transmission.

[No.02]

It is possible to vary the minimum pause time of the DTMF signal transmission.

6. TEST FUNCTIONS

6.1 Service Test Functions

The fax functions for testing individual operations, such as below.

See *Page 3-36* for details of entering the test mode. To leave the test mode, press the *FUNCTION* button, and then > button.

6.1.1 Test mode overview

Test mode can be executed by following the menu items from the display.

a) DRAM tests

Writes data to DRAM image storage areas and reads that data to check operations.

b) Print test

Prints ten different patterns within the print area.

c) Modem tests

These tests comprise the frequency test ,the G3 signal transmission test, and DTMF signals transmission test.

d) Faculty tests

These test check the operation of operation panel and sensor functions.

Figure 3-20 Test Mode

6.1.3 D-RAM tests

Pressing the *1* button from the main test mode menu selects the D-RAM tests. D-RAM Test 1 writes data to the entire D-RAM region and reads it out to check that operations are correct. D-RAM Test 2 just reads data at high speed.

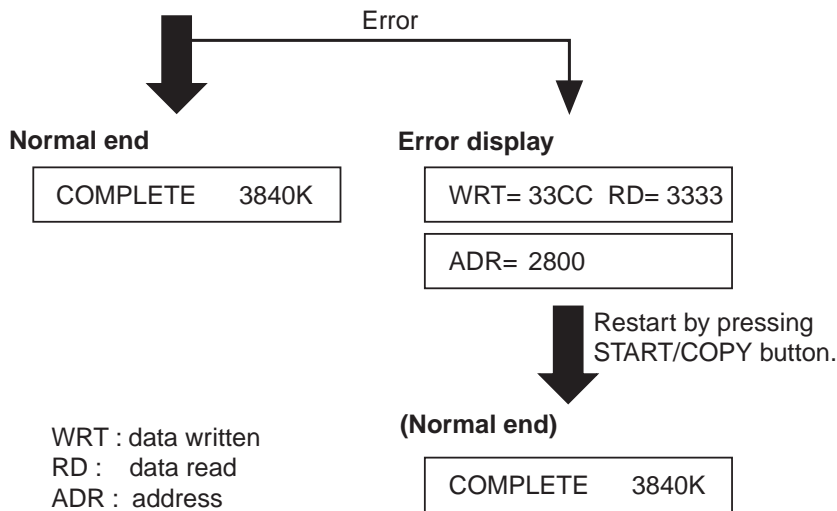

Figure 3-21 D-RAM Test

6.1.4 Print

The Print Test menu is selected by pressing the *3* key from the main test mode menu. In this test, various print patterns are output from the printer. As service print patterns, press numeric button 2 from the Print Test menu to select "3-2: Black" or press numeric button 6 to select "3-6: Endurance". Do not use the other patterns. They are for development and factory use.

Check the following for the print pattern.

Check for image shrinking, stretching, soiling, and black stripes.
"3-6: Endurance"

Check for white stripes and unevenness.
"3-2: Black"
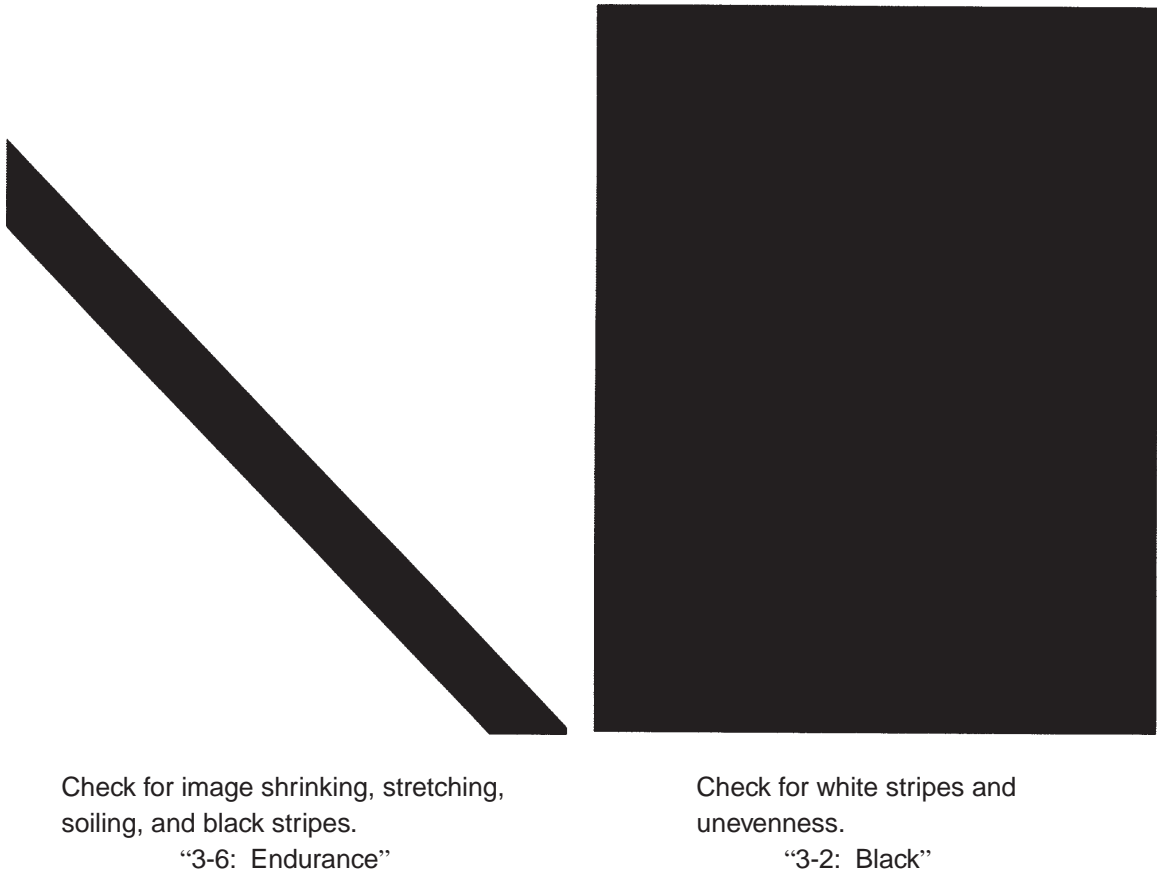

Figure 3-22 Print Pattern Check

NOTE

After completion of the print test, if the printing was normal, copy a document. If there is any defect in the copied image, there is a defect in the scan section.

6.1.5 Modem tests

These tests test modem transmission. The modem tests check whether signals are sent correctly from the modem by comparing the sound of the signals from the speaker with the sounds from a normal modem. End this test by pressing the *STOP* button.

Modem test type	Overview
Frequency test	The modem sends tone signals from the ISDN jack and the speaker.
G3 signal transmission test	The modem sends G3 signals from the modular jack and the speaker.
DTMF signal transmission tests	The modem sends DTMF signals from the ISDN jack and the speaker.

a) Frequency test

The frequency test menu is selected by pressing numeric button 2 from the board test menu. Signals of the frequencies below are sent from the modem using the modular jack and the speaker. The frequency can be changed with the numeric buttons.

Numeric button	Frequency
1	462 Hz
2	1100 Hz
3	1300 Hz
4	1500 Hz
5	1650 Hz
6	1850 Hz
7	2100 Hz

b) G3 signal transmission test

The G3 signal transmission test menu is selected by pressing numeric button 3 from the board test menu. The G3 signals below are sent from the modem using the modular jack and the speaker. The frequency can be changed with the numeric buttons.

Numeric button	Frequency
0	300 bps
1	2400 bps
2	4800 bps
3	7200 bps
4	9600 bps
5	TC7200 bps
6	TC9600 bps
7	12000 bps
8	14400 bps

NOTE

The transmission level can be changed with the *FUNCTION* button then < and > button.

c) DTMF signal transmission test

The DTMF signal transmission test is selected by pressing the *4* button from the board test menu. This test checks whether the DTMF signals (0-9, *, #) is correctly being sent across the ISDN line.

6.1.6 Faculty tests

The faculty tests are selected by pressing numeric button 6 from the main test mode menu. These tests check the following faculties of this fax.

Test type	Overview
Sensor tests	Test whether the sensors are operating correctly.
Operation panel test	Tests whether the button switches on the control panel are operating correctly.

a) Sensor tests

The sensor test is selected by pressing numeric button 3 from the faculty test menu. This test checks the status of each sensor of this fax in item 1 on the display.
Sensors that use actuators and microswitches can be checked by moving the actuator or microswitch.

6-3 : SENSOR

Pressing the 0 button.

Figure 3-23 Sensor Tests

b) Operation panel tests

The operation panel test is selected by pressing numeric button 7 from the faculty test menu. This test checks that the display, LED lamps, and buttons on the control panel are operating correctly.

b-1) Display test

Pressing the *START/COPY* button from the control panel menu, "H" is displayed 16 characters by 1 line on the display. The next time the *START/COPY* button is pressed, all the LCD dots on the display are displayed. Check for any LCD dots in the display that are not displayed.

b-2) LED lamp test

The LED lamp test is selected by pressing the *START/COPY* button after the display test.

When the *START/COPY* button is pressed, ALARM lamp on the control panel light. Check for any LED that does not light during the test.

b-3) Operation button test

The Operation button test is selected by pressing the *START/COPY* button after the LED lamp test.

In this test, you press the button corresponding to the displayed character to put it out. The table giving the correspondence between the characters and the buttons is below.

Character	Operation button	Character	Operation button
1-#	Numeric buttons	$	Resolution button
		&	ON-HOOK button
R	Redial button	F	Function button
D	Coded dial button		

When all the characters displayed have gone out, the system next starts the one-touch speed dialing button test. The letters a-f are displayed on the display, corresponding to one-touch speed dialing buttons 01-16. Each letter displayed on the display goes out when its corresponding one-touch speed dialing button is pressed.

In this test, check for operation buttons whose corresponding character or letter does not go out when the button is pressed.

7. SERVICE REPORT

7.1 Report Output Function
7.1.1 User report output functions

The fax can output user reports manually, and some reports can be output automatically using the to user data settings.

a) Manual output of reports

Report type	Operations
Activity Report	After pressing the FUNCTION button, press the RE PORT button.
User's Data List	After pressing the FUNCTION button, use the <or> button to select "USER SETTING". After pressing the START/COPY button, press the REPORT button.

Speed Dialing Lists
  One-touch dial list
  Coded speed dial list
  Group dial list
	Press the FUNCTION button, then use the <or> button to select "TEL REGISTRATION". After pressing the START/COPY button, press the REPORT button.

Document Memory List	After pressing the FUNCTION button, press the M E M O R Y REF button and use the <or> button to select "DOC MEMORY LIST". Then press the START/COPY button.

b) Reports which can be output automatically using user data settings

Each report written below can be automatically output by specifying "REPORT SETTING" in user data.

Transmission report
Reception report

NOTE

ROM Version display

The ROM version is printed on the top left hand side of the User's data list. Please refer to this when troubleshooting.

example:

EC-<u>XX-XX</u> / <u>XX</u>   EC-<u>XX-XX</u>- G4OP

└───── Printer ROM version   └───── G4 ROM version
└────── MAIN ROM version

c) Reports output automatically

Memory clear list

The fax automatically outputs a memory clear list when the power is turned on after a power cut.

CONNECTION TEL/ID	: Number sent from the other party or number dialled
PGS	: Number of pages stored in memory
SET TIME	: Time when data was stored in memory
START TIME	: Planned transmission start time (24-hour display)

7.1.2 Service report output functions
The fax outputs current service data settings, and past communications history reports.

a) List of service reports
The fax outputs the service reports shown below.

Report type	Operations
1. System data list	In the service mode, select the "**#10 REPORT**" and the
2. ISDN data list	desired numeric button 0 to 5.
3. System dump list	Press "1" to output the system data list.
4. Dch dump list	Press "2" to output the ISDN data list.
5. Bch dump list	Press "3" to output the system dump list.
	Press "4" to output the Dch dump list.
	Press "5" to output the Bch dump list.
	Press "0" to output the system data list,
	ISDN data list and system data list.
Service activity report	If you set bits 0 and 1 of #1 SSSW SW01 in the service
(with service error code	mode, the service error code and dump list are indicated
and dump list)	on the activity report (sending/receiving).

The Bch dump list cannot output in the condition it is shipped from the factory. Please change service data #4B ISDN G4 Bitswitch SW01 bit7 to "0" and then output. See *Page 3-76*.

a-1) System data list
This list shows the current settings service data #1, #3, #5, #7, #9 and "START DATE".

NOTE

"START DATE" records the date when the fax performs its first operation, after shipment from the factory.

a-2) ISDN data list
This list shows the current settings service data #4A and #4B.

a-3) System dump list

                           └── upper nibble

MACHINE CODE	:	For future use
RX/TX	:	Received/transmitted protocol signal
		bit 1 to bit 56 of received/transmitted DIS, DCS, or DTC

NOTE

If no service errors have occurred in the past, the above report will not be output.

Also, the error history for G4 B-channel communication is not included in this list. Please print out a Bch dump list.

This page intentionally left blank

a-4) Dch dump list

This list shows the D-channel communication history. Up to the latest 32 messages can be displayed.

Figure 3-28 Dch Dump List

•How to View the Dch dump list

a) Title Column

*1: Date and Time.

*2: Elapsed time since the power was turned ON (msec.). Increases every 5 msec..

*3: Message direction.

TX>: The message the machine sent

<RX: The message the network sent

*4: Message Name. "(L2)" shows that the message is a Layer 2 message.

*5: Message's parameter. Displayed as hexadecimal numbers, 2 numbers of one octet each.

b) D-channel Layer 2 Messages

The D-channel Layer 2 message (SABME, UA, etc.) is not shown in the Dch dump list. It shows messages processed inside the machine.

•EST REQ: Machine sends SABME message

•EST CNF: The UA message is received from the network pertaining to the SABME message which was sent by the machine

•EST IND: The UA message is sent from the machine pertaining to the SABME message received by the network

•REL REQ: Machine sends a DISC message

•REL CNF: The UA message is received from the network pertaining to the DISC message sent by the machine

•REL IND: The UA message is sent from the machine pertaining to the DISC message received from the network. Additionally, depending on the cause for the removal of ISDN line, even when Layer 2 has been disconnected, the main message is still shown.

c) D-channel Layer 3 Message and Information Element

Normally, 4-octets of header information are attached to a D-channel Layer 3 message. (*6)

The length of the header information varies according to the value of the 2nd octet. For example, when the value of the 2nd octet is "00," the header information length is 3 octets, and when then value of the 2nd octet is "01," the header information length is 4 octets. The information elements will be displayed following the header information. (*7)

There are 2 types of information element: single octet information element and variable length information element.

c-1) Single Octet Information Elements

The Sending Complete information element which is included in the SETUP message can be used by this machine. The service data #4B ISDN BASIC Bitswitch SW06 bit0 is set to "1," and when there is an outgoing call, on the Dch dump list right after the header information in the SETUP message sent by this machine, the main information is shown, and "A1" is set.

c-2) Variable Length Information Elements

The main information element is composed of an information element identifier (1 octet), an length of contents of information element (1 octet), and an contents of information element (the length of octet which is shown by the "length of contents of information element").

○ ○ △△ □□ □□......

          — Contents of Information element
        — Length of contents of information element
      — Information element identifier (a type of information element)

For example, if an length of contents of information element value is "02," the contents of information element is 2 octets.

The way in which the SETUP message and the main information elements in the clearing message are displayed on the Dch dump list is shown below.

c-3) Main information elements in the SETUP message

• Bearer Capability (*8)

Number 1 octet : "04"

Number 3 octet : Information transfer capacity

"88": Unrestricted digital

"90": 3.1kHz audio

"80": Speech

• Channel Identification (*9)

Number 1 octet : "18"

Number 3 octet : Information channel selection

"80": No channel

"81": B1 channel

"82": B2 channel

"83": Any channel

• Calling Party Number (*10)

Number 1 octet : "6C"

From number 4 or number 5 octet on*: Number digit (IA5 character)

*: When the most significant bit of number 3 octet is "0," number digits will appear in number 5 octet onwards. When the most significant bit of number 3 octet is "1," number digits will appear in number 4 octet onwards.

• Called Party Number (*11)

Number 1 octet : "70"

Number 4 octet and on: Number digit (IA5 character)

•Low Layer Compatibility (*12)

Number 1 octet : "7C"

Number 3 octet : Information transfer capability

"88": Unrestricted digital

"90": 3.1kHz audio

"80": Speech

•High Layer Compatibility (*13)

Number 1 octet : "7D"

Number 4 octet : High layer characteristics identification

"A1": G4

"84": G2/G3

"81": TEL

•Progress Indicator (*14)

Number 1 octet : "1E"

Number 4 octet : Progress description

"81": Call is not end-to-end ISDN; further call progress information may be available in-band

"82": Destination address is non ISDN

"83": Origination address is non ISDN

"84": Call has returned to the ISDN

"85": Interworking has occurred and has resulted in a telecommunication service change

"88": In-band information or an appropriate pattern is now available

c-4) Main information elements in the clearing message (DISC, REL, RELCOMP)

•Cause (*15)

Number 1 octet : "08"

Number 4 octet and on: Cause number

NOTE

Cause number
The "cause number" is the number which results when "80" is subtracted from the number displayed on the Dch dump list and the result is converted to decimal form. For example, in the case where the number displayed on the Dch dump list is "90," if "80" is subtracted from "90," "10" is the result. When this is converted to decimal form, "16" -the cause number - results.

Information element description
The actual information element description is regulated by the bit unit, but in the information descriptions in this manual assume a general situation and are shown by octet bit. If values outside of those shown in this manual appear on the Dch dump list, please check the ITU-T recommendations and the ETSI standards.

a-5) Bch dump list

This list shows the B-channel communication history. Up to the latest 3 communications can be displayed.

NOTE

When the machine's power is turned OFF/ON, all of the information in the Bch dump list is cleared.

Figure 3-29 Bch Dump List (Erroneous Communication)

•**How to View the Bch dump list**

a) Title Column

*1: Communication Number.

*2: Error Code. "None" will be shown for normal communications.

*3: When B-channel communication has commenced.

*4: When B-channel communication has completed.

*5: Elapsed time since the power was turned ON (msec.). Increases every 5 msec.

*6: Message direction.

   TX>: The message the machine sent

   <RX: The message the network sent

*7: Message name.

*8: Message's parameter. Displayed as hexadecimal numbers, 2 numbers of one octet each.

REFERENCE
When shipped from the factory, the settings are such that only the history of errors which occur during B-channel communication are recorded. With service data settings, the full history of B-channel communication can be recorded. See *page 3-76*.

8. WIRING DIAGRAM

Refer to "CIRCUIT DIAGRAM" (supplied separately) for details of the connector signals.

8.2 Connector Name and Signal Descriptions on following page, contains a brief description of the input/output signals.

Refer to this description when troubleshooting.

8.1 Wiring Diagram

Figure 3-33 Wiring Diagram

8.2 Connector Name and Signal Descriptions

SCNT board

Connector name	Connected to	Description
J1	Power supply unit (J201)	Input connector for +5V and +12V DC voltage converted by the PSU.
J2	Toner sensor	Receives detection signals from the toner sensor.
J3	Speaker	Connects to speaker.
J4	G4 board (J1)	The +5V DC from the power supply unit is supplied to the G4 board via the SCNT board. Also, the G3 communication signal sent from the G4 board to the SCNT board.
J5	G4 board (J2)	Image data is exchanged between the SCNT board and the G4 board through the centronics interface.
J6	Contact sensor	Connects between scanning section and contact sensor. Its purpose is to drive voltage for the contact sensor, and to receive image signals.
J7	Operation panel ass'y	Connects to Operation panel ass'y. Performs keyinput data exchange and LCD data exchange. This also includes document sensor and document edge sensor signals.
J8	PCNT board (J201)	Conducts data exchange of the document feed motor control signal, the printer image data and the printer commands and status.

G4 board

Connector name	Connected to	Description
J1	SCNT board (J4)	See SCNT board (J4)
J2	SCNT board (J5)	See SCNT board (J5)

PCNT board

Connector name	Connected to	Description
J201	SCNT board (J8)	See SCNT board (J8)
J202	Paper sensor	Receives detection signals from the paper sensor.
	Paper edge sensor	Receives detection signals from the paper edge sensor.
J203	Fixing heater	The signals for the fixing ass'y temperature control-
	Scanner unit	ler, and the LASER and scanner motor controllers are being exchanged.
J401	Main motor	Supplies drive voltage for the main motor.
	Document feed motor	Supplies drive voltage for the document feed motor.
J402	Front cover/ cartridge sensor	Receives detection signals from the front cover/ cartridge sensor.
J403	Power supply unit	Input connector for +5V and +12V DC voltage converted by the PSU.

Power supply unit

Connector name	Connected to	Description
J102	Fixing heater	The drive signal for the fixing heater is being exchanged.
J201	SCNT board (J1)	See SCNT board (J1)
J202	PCNT board (J403)	See PCNT board (J403)
J204	Pickup solenoid	Supplies drive voltage for the pickup solenoid.

This page intentionally left blank

Chapter 4

Appendix

1. INSTALLING THE FAX-L260i

REFERENCE

This machine has been designed for user installation. Therefore, this manual contains only an outline description of the procedures. For details of the installation, see the *USER'S GUIDE*.

1.1 Setting Up

- Choosing a Location for Your FAX-L260i
  Before you set up Your FAX-L260i, make sure you have read cautions of setting up FAX-L260i.
- Unpacking Your FAX-L260i
  Check that nothing is missing when the unit is unpacked.
- Assembling the FAX-L260i
- Making Connections
  Connect the ISDN line and the power cord.
- Service Data Setting (#5 TYPE)
  Set the country type to suit the communication standard used in your country.
- The Toner Cartridge
- Loading Recording Paper
  Set paper in the auto sheet feeder, set the size of paper that is to be used.
- Entering user information
  Enter user information, such as **DATE & TIME**, **ENTER ISDN NO. , UNIT TELEPHONE #**, **UNIT NAME**.

1.2 Checking Operations

- Copy operation
  Make a copy, and check that the operation is normal.
- Communication test
  Transmit to, and receive from other facsimiles, and check that images are sent normally when transmitted, and are printed normally when received. Additionally, please conduct the communication test in both G4 and G3 modes.

What to do when trouble occurs

Very rarely, during use, the display may go out, all the buttons may stop working, or some other trouble may occur because of strong electrical noise or a large amount of static. If such trouble occurs, initialize the RAM. During installation, we recommend that you perform the all clear operation after the power on. Refer to *NOTE: "ALL clear" when nothing works on Page 1-39* .

2. USER DATA FLOW

2.1 User Data Flow

The flowchart shows the default values for Europe.

For other type default, see the *User's Guide*.
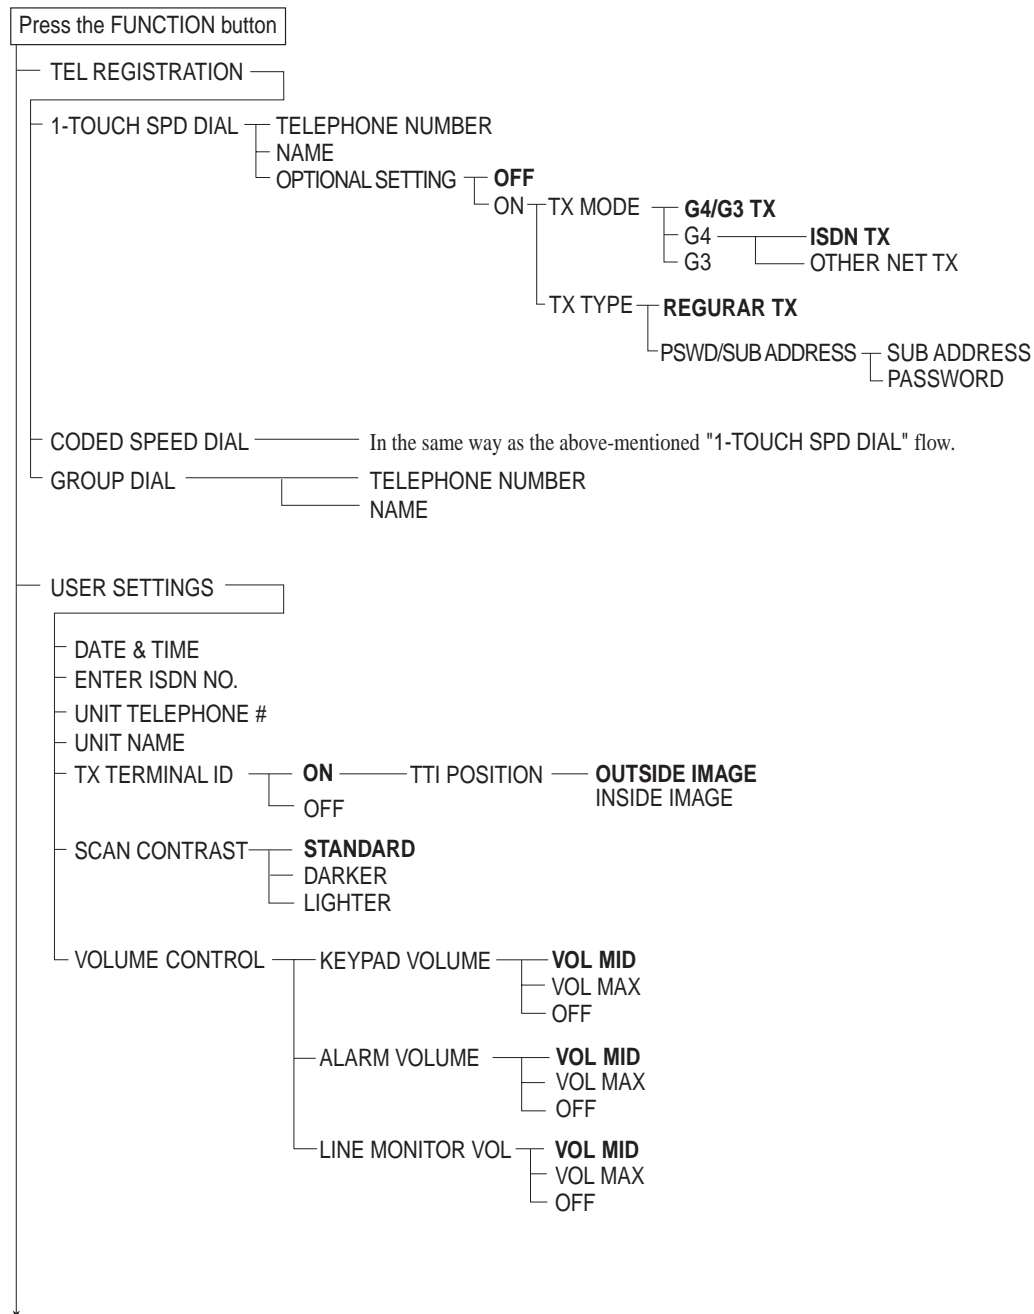

Figure 4-1 User Data Flow (1/3)

3. SPECIAL MODE FLOW

NOTE

SPECIAL MODE

The User's Guide does not contain any mention of the SPECIAL MODE. This mode is to allow user complaints to be handled by giving instructions over the telephone, without using service mode. The functions of this mode are as follows.

Using **SPECIAL MODE** while this machine is operating (faxing, or printing, etc.) will result in faulty operation.

Press the FUNCTION button then 0 button

#1 MEMORY CLEAR

SERVICE DATA
IMAGE MEMORY
ALL CLEAR

Figure 4-4 Special Mode Flow

#1 MEMORY CLEAR

SERVICE DATA:	User data and service data #1 to #3 , #4A and #4B, #6 to #7, and system dump list contents and D-channel message log initialization.(except #5 TYPE SETTING)
IMAGE MEMORY:	Image data initialization.
ALL CLEAR:	All user data, service data, activity management data, and image data initialization (except #5 TYPE SETTING, COUNTER)

4. MAKER CODE

The 1-byte maker code displayed on the error dump list corresponds to the list of makers shown below.

REFERENCE
For a sample of a dump list containing maker codes, see pages 3-113~3-114

Document creation and page layout were performed using Adobe® PageMaker® 6.5J.

Logos and illustrations were created using Macromedia® FreeHand 8.0J.

I. CONTENTS

II. ABOUT THIS MANUAL

1. ILLUSTRATION INDEX

For illustration index, the parts layout illustrations in this parts catalog are listed in abbreviated form in order of illustration number to identify the pages they appear on. To find an illustration of a part, see the ILLUSTRATION INDEX.

2. PARTS LAYOUT & PARTS LIST

Parts layout illustration

a) Parts search

Find a part from the parts layout illustration and find its key number from the parts list to identify the part number and name.

Further, screws, nuts, washers, grip rings, pins and spacers are mentioned in the parts list.

Note: If parts have the same or similar shape but different specifications, their key number is assigned to several part numbers and names in the parts list.

b) Parts replacement procedure

The parts layout illustrations are arranged according to the disassembly procedure of the product.

When a unit in the illustration can be disassemble further, a reference illustration page of the disassembly will be included.

Parts where grease is to be applied are displayed as "Lubrication". When replacing parts, or if grease has accidentally been wiped off, refer to "4". (Lubrications), and reapply the grease.

The parts require carefully work are marked "See page 5-x". So refer to the corresponded page "5". (GUIDE TO REPLACEMENT).

The letters (Ⓐ, Ⓑ etc.) in the illustration indicate the connection locations of cables and screws.

Parts list

a) FIGURE & KEY No.

The FIGURE & KEY No. column corresponds to the key numbers assigned to the parts in the parts layout illustration.

It also corresponds to the part locations printed on the PC board.

b) PART NUMBER

The PART NUMBER column gives the part numbers corresponding to the key numbers. To order a part, indicate the part number clearly.

Note: Parts marked NPN are not service parts.

c) RANK

The service parts with N in the RANK column are order parts.

d) QTY

The QTY column gives the number of parts in the corresponding components layout illustration.

e) DESCRIPTION

The DESCRIPTION column gives the part names in English.

To order a part, indicate the part name, too.

3. TOOL

This is a list of tools used for servicing products.

4. LUBRICATIONS

Where grease is to be applied in order to allow moving parts to work smoothly, and to increase conductivity, the type and amount of grease to be used will be mentioned.

5. GUIDE TO REPLACEMENT

Explains the special cares and cautions for the parts replacement.

6. NUMERICAL INDEX

All the parts listed in this parts catalog are arranged in order of part number. You can identify part locations and names from the NUMERICAL INDEX.

4. LUBRICATIONS

4.1 Locations

Some parts are lubricated with grease to ensure smooth operation and to increase conductivity. If lubricated parts are replaced or grease is removed, grease must be reapplied.

4.1.1 DOCUMENT FEED ROLLER

MOLYKOTE EM-50L
Approx. 40mg

MOLYKOTE EM-50L
Approx. 40mg

IF-20
Approx. 20mg
Contact between document
feed roller and grounding plate
See Fig.9 for the assembly

4.1.2 DRIVE GEARS

MOLYKOTE EM-50L
Approx. 20-40mg

MOLYKOTE EM-50L
Approx. 40-60mg
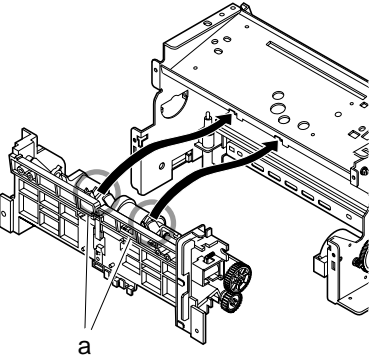

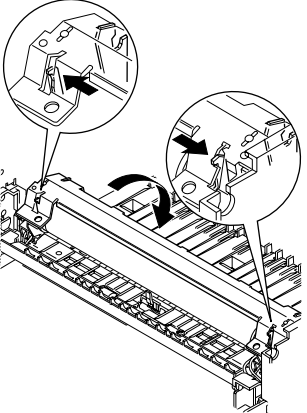

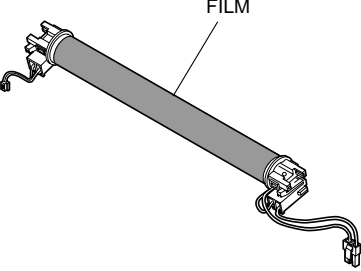

MOLYKOTE EM-50L
Approx. 10-25mg
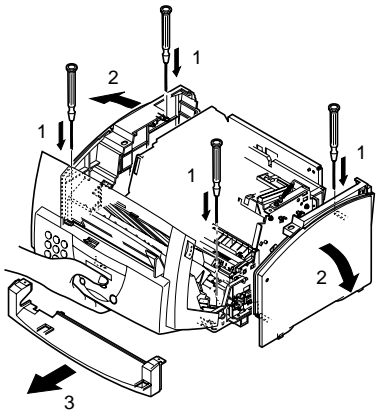

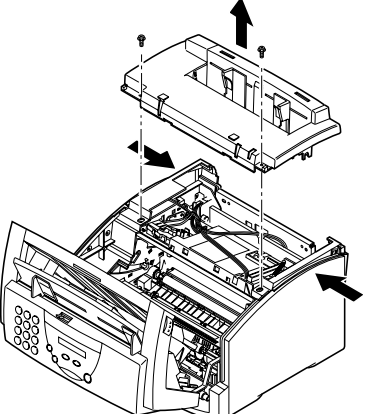

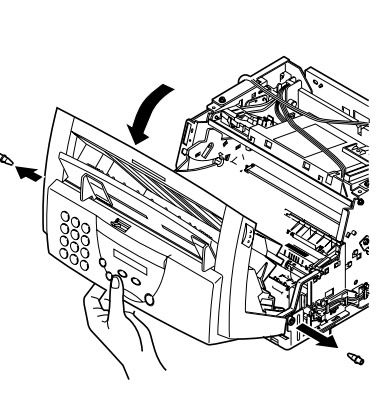

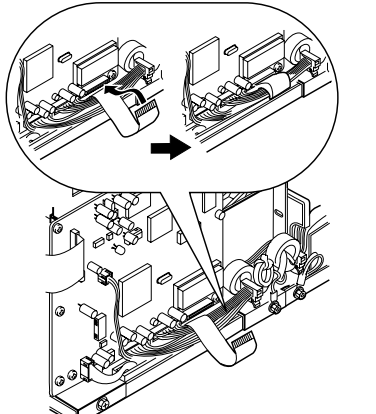

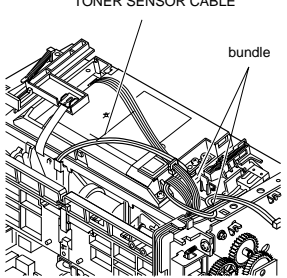

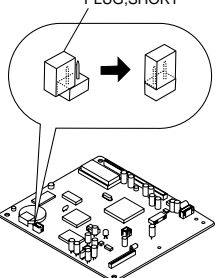

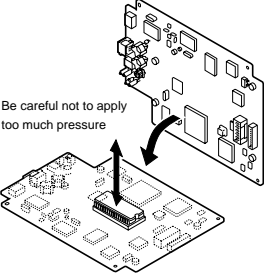

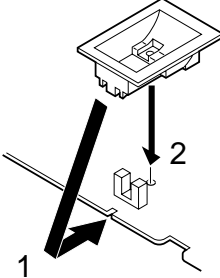

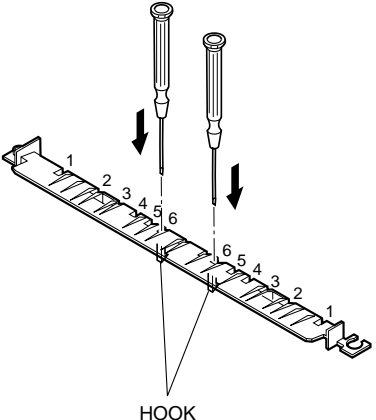

See Fig.12 for the assembly
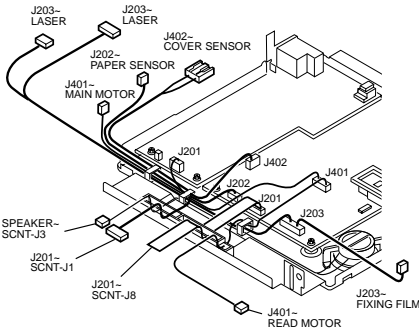

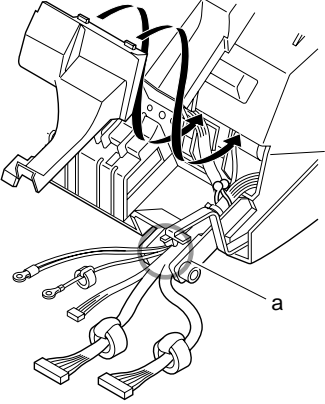

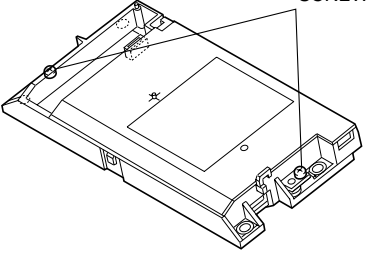

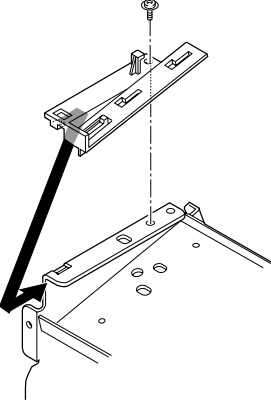

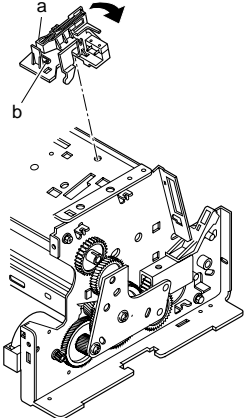

4.1.3 PRESSURE ROLLER & SEPARATION GUIDE ASS'Y

MOLYKOTE EM-50L
Approx. 100mg

IF-20
Approx. 100mg
See Fig.13 for the assembly

5. GUIDE TO REPLACEMENT

FIGURE 2-a	See Page 2-2	FIGURE 2-b	See Page 2-2	FIGURE 3-a	See Page 2-3	FIGURE 3-b	See Page 2-3

To remove the left and right side covers, use a fine screwdriver or your finger to unhook the retaining clips.

While pressing either the left or right side cover in the direction shown, lift off the upper cover.

When removing the READING ASS'Y, use one hand to support, the READING ASS'Y while removing the TAPER PIN.

Use a FLAT CABLE to gather and contain the cables coming from the READ ASS'Y.

FIGURE 4-a	See Page 2-4	FIGURE 4-b	See Page 2-4	FIGURE 4-c	See Page 2-4	FIGURE 5-a	See Page 2-5

Route the TONER SENSOR CABLE as shown in the figure to anchor the LASER CABLE and DOOR SENSOR CABLE.

The service part version of the SCNT board has a SHORT PLUG on one of the pins.When replacing the SCNT board, cover both pins with the plug. If both pins of the SCNT board service part are already by the plug, DO NOT INSTALL THE PART; the backup battery may be significantly depleted. When installing, be careful to avoid electrostatic damage to board components.

When exchanging the ROM on the G4 board, please work on a table or stand which has an electrically resistant rubber mat. When removing the ROM, first remove the G4 board from the machine, and then use the special tool (part No.HY9-0022-000) to remove the ROM. Also, when attaching the ROM to the G4 board, if the ROM is pressed into place from the top too firmly, the patterns or elements on the board may be damaged, so please be careful.

To attach the WATER PROOF COVER to the PCNT board, slide it into position (1) and press down to secure (2).

FIGURE 5-b	See Page 2-5

Route the cables on the PCNT and PSU boards as shown in the figure.

FIGURE 6-a	See Page 2-6

Attach the CABLE COVER by hooking the projections into the slots as shown by the arrows. Be careful not to pinch the cables (a).

FIGURE 10-a	See Page 2-10

Do not loosen or remove the two black screws on the SCANNER ASS'Y.

FIGURE 10-b	See Page 2-10

Attach the ACTUATOR BASE retaining clip to the frame as shown by the arrow.

FIGURE 10-c	See Page 2-10

To attach the SWITCH LEVER ASS'Y: with portion (a) lifted up, and while continuing to press upward on pin (b), rotate the ass'y in the arrow's direction.

FIGURE 10-d	See Page 2-10

After attaching the PAPER FEED UNIT to the frame, hook portions (a) into the slots as shown by the arrows.

FIGURE 11-a	See Page 2-11

When removing the PRESSURE PLATE, use a fine screwdriver to press the clips outward and unhook them.

FIGURE 11-b	See Page 2-11

Be careful not to touch hte film on the FIXING ASS'Y with your hands.

FIGURE 11-c	See Page 2-11	FIGURE 11-d	See Page 2-11	FIGURE 12-a	See Page 2-12	FIGURE 13-a	See Page 2-13

Insert a fine screwdriver into the sixth holes from both left and right ends to unhook the retaining clips.

Do not touch the rubber portion of the PRESSURE ROLLER with your hands.

When attaching the MAIN MOTOR, position it as shown in the figure.

Do not touch the sponge portion of the TRANSFER ROLLER with your hands.

FIGURE 13-b	See Page 2-13	FIGURE 14-a	See Page 2-14	FIGURE 14-b	See Page 2-14	FIGURE 14-c	See Page 2-14

When removing the TRANSFER GUIDE, use a fine screwdriver to unhook the retaining clips.

When assembling the PICKUP ROLLER ASS'Y, be careful that the cams and roller are correetiy aligned.

When attaching the PICKUP ROLLER ASS'Y, be sure it is faced in the direction shown in the figure.

Slide the projections on the FEEDER ASS'Y into the slots on the PAPER FEED FRAME.
