When using something like this

```
as mahlzeit ipa
   routing-key 1005 5
```

and then connecting an IPA client, we crash in `ipa_asp_fsm_wait_id_ack2()` which contains an `OSMO_ASSERT(as)`. The assert fails as we look-up the assert with a static routing-context of '0' (IPA doesn't allow us to transport a routing context in the message), which fails.

This is similar to #4233

The proper solution is probably to prevent the user from ever configuring a non-zero routing context for IPA AS.
