The first time a BVC Reset times out we wait a couple seconds, but after sending the second BVC Reset all other Resets are sent directly after another without waiting.

bts-trx: Fix osmocom dyn ts assert hit during Adm State Unlock

How to reproduce:

- Configure a TS to be TCH/F_TCH/H_PDCH in osmo-bsc.cfg
- Run the network with osmo-bts-trx, then use osmo-bsc's "rf_locked 1"
- Then, unlock it: "rf_locked 0"
- The following assert will be hit:
  
  ```
  Assert failed ts->dyn.pchan_is == ts->dyn.pchan_want /osmo-bts/src/osmo-bts-trx/l1_if.c:349
  ```

```

History

### #1 - 12/21/2020 05:34 PM - lynxis
- File bvc_reset_too_many.pcapng added
- Status changed from Feedback to New

### #2 - 01/16/2021 07:16 PM - daniel
- Status changed from New to Rejected

I guess we can reject this issue since it’s related to the SNS fixes you pushed?

Looking at the trace again I can’t see any issue/multiple BVC-RESETs being sent. The BVC-RESET is rejected by the gbproxy with a STATUS (because sns was broken in this version). TTCN3 simply ignores that and continues resetting the ptp-bvcs which are also (rightly this time) rejected.

If you disagree please reopen.
